The Art of High Performance Computing for Computational Science, Vol. 2 Masaaki Geshi, 2019-10-01 This book presents advanced and practical techniques for performance optimization for highly parallel processing. Featuring various parallelization techniques in material science, it is a valuable resource for anyone developing software codes for computational sciences such as physics, chemistry, biology, earth sciences, space science, weather, disaster prevention and manufacturing, as well as for anyone using those software codes. Chapter 1 outlines supercomputers and includes a brief explanation of the history of hardware. Chapter 2 presents procedures for performance evaluation, while Chapter 3 describes the set of tuned applications in materials science, nanoscience and nanotechnology, earth science and engineering on the K computer. Introducing the order-N method, based on density functional theory (DFT) calculation, Chapter 4 explains how to extend the applicability of DFT to large-scale systems by reducing the computational complexity. Chapter 5 discusses acceleration and parallelization in classical molecular dynamics simulations, and lastly, Chapter 6 explains techniques for large-scale quantum chemical calculations, including the order-N method. This is the second of the two volumes that grew out of a series of lectures in the K computer project in Japan. The first volume addresses more basic techniques, and this second volume focuses on advanced and concrete techniques.

Clusters in Nuclei Christian Beck, 2012-02-16 Following the pioneering discovery of alpha clustering and of molecular resonances, the field of nuclear clustering is today one of those domains of heavy-ion nuclear physics that faces the greatest challenges, yet also contains the greatest opportunities. After many summer schools and workshops, in particular over the last decade, the community of nuclear molecular physicists has decided to collaborate in producing a comprehensive collection of lectures and tutorial reviews covering the field. This second volume follows the successful Lect. Notes Phys. 818 (Vol.1), and comprises six extensive lectures covering the following topics: Microscopic cluster models Neutron halo and break-up reactions Break-up reaction models for two- and three-cluster projectiles Clustering effects within the di-nuclear model Nuclear alpha-particle condensates Clusters in nuclei: experimental perspectives By promoting new ideas and developments while retaining a pedagogical style of presentation throughout, these lectures will serve as both a reference and an advanced

teaching manual for future courses and schools in the fields of nuclear physics and nuclear astrophysics.

Performance of Light Aircraft John T. Lowry, 1999 Pilots, aviation students, kitplane builders, aircraft fleet operators and aeronautical engineers can all determine how their propeller-driven airplanes will perform, under any conditions, by using the step-by-step bootstrap approach introduced in this book. A few routine flying manoeuvres (climbs, glides, a level speed run) will give the necessary nine numbers. High-school level calculations then give performance numbers with much greater detail and accuracy than many other methods - for the reader's individual aircraft.

Perspectives In Heavy Ion Physics - Proceedings Of The 3rd Japan-Italy Joint Symposium '97 Cosimo Signorini, F Soramel, T Kishida, 1998-12-30 These proceedings present the most recent progress made by Japanese and Italian researchers in the field of heavy ion physics. They cover both experimental and theoretical aspects from low energies (Tandem Van de Graaff accelerators) to medium energies (LINAC, Cyclotrons) up to relativistic energies (LHC at CERN). The majority of the experiments presented have been performed in the two largest Italian laboratories: LNL, Legnaro-Padova, with the Tandem + SC Linac (ALPI); LNS, Catania, with the Tandem + SC Cyclotron; and in one of the largest Japanese facilities: RIKEN, Saitama, with the Ring Cyclotron. The future Italian developments with relativistic heavy ions at LHC (CERN) are also presented, as well as experiments in collaboration with other laboratories, like JAERI, CNS (University of Tokyo), the Tandem Accelerator Center (Tsukuba), GANIL (France), and the Accelerator Laboratory in Munich, Germany. The highlights of the proceedings, and the area in which most experimental efforts are presently involved, are: research with radioactive ion beams at RIKEN with the RIPS separator; spectroscopy study at LNL with the GASP/EUROBALL 4 π spectrometers; and intermediate energy physics (deep inelastic, fragmentation) at LNS. Also presented are the future trends in Japan at RIKEN, RiBeam Factory, and JHP at KEK, and in Italy EXCYT at LNS and SPES at LNL. All these new developments are strongly connected with production and subsequent exploitation of radioactive ion beams, and offer a very promising, fertile future.

Irish Nouns Andrew Carnie, 2008-08-21 This book presents the first comprehensive reference on noun declensions in Modern Irish. Whereas traditional descriptions of noun inflection are notoriously complex and filled with exceptions and irregularities, this reference guide provides a systematic and straightforward characterization of nominal paradigms, which also captures important generalizations about the inflection of nouns. Andrew Carnie proposes ten declension classes instead of the traditional five and separates off seven major types of plural formation. He provides fully inflected paradigms for 1200 nouns, and a reference list of 10,000 Irish nouns annotated with their new declension class, their plural type and the form of the genitive singular and common case (nominative) plural. The book also includes parallel information on the inflection of adjectives and prepositions. This unique reference tool will be invaluable not only to language researchers and authors, but to teachers and students of the language, whether they are native speakers or beginners.

Experience Research Social Change Colleen Reid, Lorraine Greaves, Sandra Kirby, 2017-01-03 Experience Research Social Change is a "how to" guide to research that also raises broader theoretical, methodological, and ethical questions. First published in 1989, it was the first critical methods book, and continues to inspire generations of researchers, students, and community workers. The third edition has been thoroughly revised, now containing twelve chapters organized into three parts: experience, research, and social change. The new edition also includes a wider range of examples from diverse researchers and topics that are woven throughout the text, including transdisciplinary research, sex and gender analysis, intersectional analysis, Indigenous methodologies, community-based research, digital and online approaches to research, ethical responsibilities and commitments, and knowledge translation.

Contact Metamorphism Derrill M. Kerrick, 2018-12-17 Volume 26 of Reviews in Mineralogy provides a multidisciplinary review of our current knowledge of contact metamorphism. As in any field of endeavor, we are provided with new questions, thereby dictating future directions of study. Hopefully, this

volume will provide inspiration and direction for future research on contact metamorphism. The Mineralogical Society of America sponsored the short course on Contact Metamorphism, October 17-19, 1991, at the Pala Mesa Resort, Fallbrook, California, prior to its annual meeting with the Geological Society of America.
