*A Guide to Clinical Management and Public Health Response for Hand, Foot, and Mouth Disease (HFMD)* WHO Regional Office for the Western Pacific, 2011 Hand, foot and mouth disease (HFMD) is a common infectious disease caused by a group of enteroviruses, including coxsackievirus A16 (CA16) and enterovirus 71 (EV71). Over the last decade, many outbreaks of HFMD have been reported in countries of the Western Pacific Region. HFMD caused by EV71 is of particular concern because of the increased number of deaths associated with infection. Until now, there has been little guidance on HFMD caused by EV71. This publication provides practical support for the treatment, prevention and control of HFMD based on the most recent scientific literature and the current understanding and experiences of international experts. It is intended as a resource for both clinicians working with HFMD cases on a regular basis and for public health personnel who are responsible for preventing and responding to outbreaks of HFMD.

*Dermatology Made Easy* Amanda Oakley, 2017-05-06 A concise overview of the common dermatological conditions most likely to present in general medicine From reviews: ... a perfect solution to the constant struggle that dermatology diagnosis presents to primary care physicians and other

providers... This well-formatted book covers a vast array of topics ranging from common to rare skin disorders. The pictures are immensely helpful in the understanding of various skin rashes.... Fam Med 2019;51(5):451–452. "... easy to read and informative. One cannot emphasise enough the quality and comprehensive nature of the photographic content.... As someone who was interested in dermatology even as a medical student my only regret is that this book was not around when I was a student as it would have very adequately guided me into my beloved subspecialty." Ulster Med J 2017;86(3):1–1. "The introduction outlines dermatological conditions by symptom, morphology and body site, providing an excellent index prior to delving into greater detail in the following chapters. The logical approach and level of detail make this text perfect for medical students, interns/residents, primary care physicians and other specialists who wish to quickly identify differential diagnoses or refresh their knowledge of dermatological conditions." A Lecturer in Dermatology Dermatology Made Easy is based on the hugely popular DermNet New Zealand website and is designed to help GPs, medical students and dermatologists diagnose skin conditions with confidence. The book starts by providing a series of comprehensive tables, complete with over 500 thumbnail photos, to aid diagnosis according to symptoms, morphology, or body site. Once you have narrowed down the diagnosis, cross-references then guide you to more detailed descriptions, and another 700 photographs, covering: common infections inflammatory rashes non-inflammatory conditions skin lesions Every section provides consistent information on the disorder: who gets it and what causes it? what are the clinical features and does it cause any complications? how do you diagnose it? how do you treat it and how long does it take to resolve? The book concludes with a comprehensive section on further investigations and treatment options. Dermatology Made Easy combines the essential focus of the Made Easy book series with the authority and knowledge base of DermNet New Zealand's unparalleled resources. Printed in full colour throughout.

Management of Diabetic Foot Complications Clifford P. Shearman, 2015-02-04 Public and political concern about the increasing prevalence of diabetes has prompted major concern about treatment of patients with the condition. Foot complications are some of the commonest causes of hospitalisation of people with diabetes and if not treated well often lead to amputation. There is evidence that 85% of these amputations can be prevented by better

understanding of the problem and by multi-disciplinary teams working more effectively together. This has been recognised and NICE have recently published guidelines on diabetic foot complications as have Diabetes UK and NHS Diabetes. These have been successful in raising awareness of the problem but the local multi-disciplinary teams need clear practical advice on how to manage the foot in diabetes and deliver high quality care. With the current interest in improving outcomes for patients with foot complications this is an ideal time to make a practical evidence-based handbook available. This book will provide clear practical guidelines on how to manage all aspects of the foot in diabetes as well as an in-depth analysis of the most recent evidence. The book will be based on care pathways with algorithms for each section so it would be of practical value in any clinic in primary or secondary care. It will appeal to a wide range of health care professionals treating people with diabetes: vascular surgeons and trainees, orthopaedic surgeons, diabetes specialist nurses, podiatrists and tissue viability nurses.□
