Five Miles Away, A World Apart James E. Ryan, 2010-08-06 How is it that, half a century after *Brown v. Board of Education*, educational opportunities remain so unequal for black and white students, not to mention poor and wealthy ones? In his important new book, *Five Miles Away, A World Apart*, James E. Ryan answers this question by tracing the fortunes of two schools in Richmond, Virginia—one in the city and the other in the suburbs. Ryan shows how court rulings in the 1970s, limiting the scope of desegregation, laid the groundwork for the sharp disparities between urban and suburban public schools that persist to this day. The Supreme Court, in accord with the wishes of the Nixon administration, allowed the suburbs to lock nonresidents out of their school systems. City schools, whose student bodies were becoming increasingly poor and black, simply received more funding, a measure that has proven largely ineffective, while the independence (and superiority) of suburban schools remained sacrosanct. Weaving together court opinions, social science research, and compelling interviews with students, teachers, and principals, Ryan explains why all the major education reforms since the 1970s—including school finance litigation, school choice, and the No Child Left Behind Act—have failed to bridge the gap between urban and suburban schools and have unintentionally entrenched segregation by race and class. As long as that segregation continues, Ryan forcefully argues, so too will educational inequality. Ryan closes by suggesting innovative ways to promote school integration, which would take advantage of unprecedented demographic shifts and an embrace of diversity among young adults. Exhaustively researched and elegantly written by one of the nation's leading education law scholars, *Five Miles Away, A World Apart* ties together, like no other book, a half-century's worth of education law and politics into a coherent, if disturbing, whole. It will be of interest to anyone who has ever wondered why our schools are so unequal and whether there is anything to be done about it.

Predicting the Unpredictable Susan Elizabeth Hough, 2016-11-08 An earthquake can strike without warning and wreak horrific destruction and death, whether it's the catastrophic 2010 quake that took a devastating toll on the island nation of Haiti or a future great earthquake on the San Andreas Fault in California, which scientists know is inevitable. Yet despite rapid advances in earthquake science, seismologists still can't predict when the Big One will hit. *Predicting the Unpredictable* explains why, exploring the fact and fiction behind the science—and pseudoscience—of earthquake prediction. Susan Hough traces the continuing quest by seismologists to forecast the time, location, and magnitude of future quakes. She brings readers into the laboratory and out into the field—describing attempts that have raised hopes only to collapse under scrutiny, as well as approaches that seem to hold future promise. She also ventures to the fringes of pseudoscience to consider ideas outside the scientific mainstream. An entertaining and accessible foray into the world of earthquake prediction, *Predicting the Unpredictable* illuminates the unique challenges of predicting earthquakes.

Report to the President President's Council of Advisors on Scie,Executive Office of the President,2016-03-06 Cities are beginning a new era of change. From 1920 to 2010 many U.S. cities hollowed out as suburbs grew faster than their urban cores. The trend started reversing in 2011 as Millennials and Baby Boomers looking for social connections and convenience settled in urban neighborhoods. Accompanying the resurgence of residential cities are complex and persistent urban challenges, including resilience against climate change and natural disasters. This report focuses on the technologies that shape some key infrastructures and economic activities, as opposed to those involved in delivering education, health care, or social services. As described in Chapter 2 of the report, technological advances promise to improve the environments in which people live and the services that city governments and companies offer.Cleaner energy technologies, new models of transportation, new kinds of water systems, building-construction innovation, low-water and soil-less agriculture, and clean and small-scale manufacturing are or will be available in the near future. These options, which are summarized in the Table of City Infrastructure Technologies, are evolving through private-sector commercialization and implementation plus university and National Laboratory research and development (R&D) in concert with city governments.
