Whole T. Colin Campbell, Howard Jacobson, 2013-05-07 NEW YORK TIMES BESTSELLER What happens when you eat an apple? The answer is vastly more complex than you imagine. Every apple contains thousands of antioxidants whose names, beyond a few like vitamin C, are unfamiliar to us, and each of these powerful chemicals has the potential to play an important role in supporting our health. They impact thousands upon thousands of metabolic reactions inside the human body. But calculating the specific influence of each of these chemicals isn't nearly sufficient to explain the effect of the apple as a whole. Because almost every chemical can affect every other chemical, there is an almost infinite number of possible biological consequences. And that's just from an apple. Nutritional science, long stuck in a reductionist mindset, is at the cusp of a revolution. The traditional "gold standard of nutrition research has been to study one chemical at a time in an attempt to determine its particular impact on the human body. These sorts of studies are helpful to food companies trying to prove there is a chemical in milk or pre-packaged dinners that is "good for us, but they provide little insight into the complexity of what actually happens in our bodies or how those chemicals contribute to our health. In The China Study, T. Colin Campbell (alongside his son, Thomas M. Campbell) revolutionized the way we think about our food with the evidence that a whole food, plant-based diet is the healthiest way to eat. Now, in *Whole*, he explains the science behind that evidence, the ways our current scientific paradigm ignores the fascinating complexity of the human body, and why, if we have such overwhelming evidence that everything we think we know about nutrition is wrong, our eating habits haven't changed. *Whole* is an eye-opening, paradigm-changing journey through cutting-edge thinking on nutrition, a scientific tour de force with powerful implications for our health and for our world.

Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-11-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. *Parenting Matters* identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

A Mind of Your Own Kelly Brogan, M.D., Kristin Loberg, 2016-03-15 Named one of the top health and wellness books for 2016 by MindBodyGreen Depression is not a disease. It is a symptom. Recent years have seen a shocking increase in antidepressant use the world over, with 1 in 4 women

starting their day with medication. These drugs have steadily become the panacea for everything from grief, irritability, panic attacks, to insomnia, PMS, and stress. But the truth is, what women really need can't be found at a pharmacy. According to Dr. Kelly Brogan, antidepressants not only overpromise and underdeliver, but their use may permanently disable the body's self-healing potential. We need a new paradigm: The best way to heal the mind is to heal the whole body. In this groundbreaking, science-based and holistic approach, Dr. Brogan shatters the mythology conventional medicine has built around the causes and treatment of depression. Based on her expert interpretation of published medical findings, combined with years of experience from her clinical practice, Dr. Brogan illuminates the true cause of depression: it is not simply a chemical imbalance, but a lifestyle crisis that demands a reset. It is a signal that the interconnected systems in the body are out of balance – from blood sugar, to gut health, to thyroid function– and inflammation is at the root. *A Mind of Your Own* offers an achievable, step-by-step 30-day action plan—including powerful dietary interventions, targeted nutrient support, detoxification, sleep, and stress reframing techniques—women can use to heal their bodies, alleviate inflammation, and feel like themselves again without a single prescription. Bold, brave, and revolutionary, *A Mind of Your Own* takes readers on a journey of self-empowerment for radical transformation that goes far beyond symptom relief.

Snake Oil Science R. Barker Bausell PhD,2009-07-31 Millions of people worldwide swear by such therapies as acupuncture, herbal cures, and homeopathic remedies. Indeed, complementary and alternative medicine is embraced by a broad spectrum of society, from ordinary people, to scientists and physicians, to celebrities such as Prince Charles and Oprah Winfrey. In the tradition of Michael Shermers *Why People Believe Weird Things* and Robert Parks's *Voodoo Science*, Barker Bausell provides an engaging look at the scientific evidence for complementary and alternative medicine (CAM) and at the logical, psychological, and physiological pitfalls that lead otherwise intelligent people--including researchers, physicians, and therapists--to endorse these cures. The book's ultimate goal is to reveal not whether these therapies work--as Bausell explains, most do work, although weakly and temporarily--but whether they work for the reasons their proponents believe. Indeed, as Bausell reveals, it is the placebo effect that accounts for most of the positive results. He explores this remarkable phenomenon--the biological and chemical evidence for the placebo effect, how it works in the body, and why research on any therapy that does not factor in the placebo effect will inevitably produce false results. By contrast, as Bausell shows in an impressive survey of research from high-quality scientific journals and systematic reviews, studies employing credible placebo controls do not indicate positive effects for CAM therapies over and above those attributable to random chance. Here is not only an entertaining critique of the strangely zealous world of CAM belief and practice, but it also a first-rate introduction to how to correctly interpret scientific research of any sort. Readers will come away with a solid understanding of good vs. bad research practice and a healthy skepticism of claims about the latest miracle cure, be it St. John's Wort for depression or acupuncture for chronic pain.
