*Trends in Data Protection and Encryption Technologies* Valentin Mulder, Alain Mermoud, Vincent Lenders, Bernhard Tellenbach, 2023-07-31 This open access book reports the results of a study conducted in Switzerland in 2022 to provide an overview of the changing landscape of encryption and data protection technologies and their global usage trends. The Swiss Confederation tasked the Cyber-Defence Campus (CYD Campus) to identify the 38 most relevant encryption and data protection technologies, analyze their expected evolution until 2025, and derive implications for the military, civil society, and economy sectors. Fifty experts from academia, government, and industry have contributed to this study and provided their viewpoints on the different technologies and trends. This comprehensive collection of factsheets provides a reference for organizations and individuals that need to elaborate coherent and efficient data protection and encryption strategies in the coming years. The 38 technologies have been sorted into five categories. First, encryption foundations represent the technologies used to create other encryption applications. Second, low-level applications represent the technologies that focus on micro functionalities. Third, high-level applications represent the technologies that focus on more abstract and macro functionalities. Fourth,

data protection represents the technologies used to protect data without encrypting these data. Finally, use cases represent concrete ways the different technologies can be used together to create a working solution. The book serves as a guide for decision-making within administrations, government organizations, and industry. It will also be interesting for the tech-savvy board member or engineers looking to get an entry point into data protection topics. Last not least, the book will also be a valuable reading for anyone interested in data protection and encryption.

*Settling His Hash* William W. Johnstone, J.A. Johnstone, 2022-11-29 Legendary national bestselling Western authors William W. Johnstone and J.A. Johnstone return with a new installment in the rip-roaring, gun-blazing Chuckwagon Trail series featuring Dewey "Mac" Mackenzie. A chuckwagon cook who's also deadly with a pair of six-shooters, he's a man who has no qualms filling men's bellies with food—or lead. Finally cleared of a crime he didn't commit, he's able to enjoy the fruits of his labor on the trail without looking over his shoulder. But even his best served grub can be spoiled by those with evil appetites... After traversing California from one end to the other, and finding nothing much to his liking, Mac Mackenzie is heeding his heart's call to return to Texas. Lucky for him, a group of cowboys heading for the Lone Star state need someone who knows their way around a chuckwagon. Their previous cook's temper boiled over during a saloon brawl and ended up in jail. With no love for the cook—or his food—the cowboys just want to head home peaceably, share some quality meals with good company, and give their boss the small fortune they're carrying from the herd they sold. Otis Bradley knows he's no gourmet, but that's no excuse for his fellow cattlemen to leave him rotting behind bars. He still earned his share of the payroll for this time on the

trail—and after befriending outlaw Stack Ketchum, Otis has a gang of gunfighters ready to dish out some revenge in exchange for the loot. But Otis and Ketchum's badmen haven't reckoned with the likes of Mac, a man who will settle their hash—raw and bloody . . . JOHNSTONE COUNTRY. WHERE MEN STAKE THEIR CLAIMS.

**Multi-modal Hash Learning** Lei Zhu, Jingjing Li, Weili Guan, 2023-08-04 This book systemically presents key concepts of multi-modal hashing technology, recent advances on large-scale efficient multimedia search and recommendation, and recent achievements in multimedia indexing technology. With the explosive growth of multimedia contents, multimedia retrieval is currently facing unprecedented challenges in both storage cost and retrieval speed. The multi-modal hashing technique can project high-dimensional data into compact binary hash codes. With it, the most time-consuming semantic similarity computation during the multimedia retrieval process can be significantly accelerated with fast Hamming distance computation, and meanwhile the storage cost can be reduced greatly by the binary embedding. The authors introduce the categorization of existing multi-modal hashing methods according to various metrics and datasets. The authors also collect recent multi-modal hashing techniques and describe the motivation, objective formulations, and optimization steps for context-aware hashing methods based on the tag-semantics transfer.
