**Developing Creative Thinking in Beginning Design** Stephen Temple,2018-10-03

Learning to think and act creatively is a requisite fundamental aspect of design education for architectural and interior design as well as industrial and graphic design. Development of creative capacities must be encountered early in design education for beginning students to become self-actualized as skillful designers. With chapters written by beginning design instructors, *Developing Creative Thinking in Beginning Design* addresses issues that contribute to deficiencies in teaching creativity in contemporary beginning design programs. Where traditional pedagogies displace creative thinking by placing conceptual abstractions above direct experiential engagement, the approaches presented in this book set forth alternative pedagogies that mitigate student fears and misconceptions to reveal the potency of authentic encounters for initiating creative transformational development. These chapters challenge design pedagogy to address such issues as the spatial body, phenomenological thinking, making as process, direct material engagement and its temporal challenges, creative decision making and the wickedness of design, and the openness of the creative design problem. In doing so, this book sets out to give greater depth to first design experiences and more effectively enable the breadth and depth of the teacher-student relationship as a means of helping your students develop the capacity for long-term self-transformation.

**The Hand** Frank R. Wilson,1999-09-14 A startling argument . . . provocative . . . absorbing. --The Boston Globe Ambitious . . . arresting . . . celebrates the importance of hands to our lives today as well as to the history of our species. --The New York Times Book Review The human hand is a miracle of biomechanics, one of the most remarkable adaptations in the history of evolution. The hands of a concert pianist can elicit glorious sound and stir emotion; those of a surgeon can perform the most delicate operations; those of a rock climber allow him to scale a vertical mountain wall. Neurologist Frank R. Wilson makes the striking claim that it is because of the unique structure of the hand and its evolution in cooperation with the brain that Homo sapiens became the most intelligent, preeminent animal on the earth. In this fascinating book, Wilson moves from a discussion of the hand's evolution--and how its intimate communication with the brain affects such areas as neurology, psychology, and linguistics--to provocative new ideas about human creativity and how best to nurture it. Like Oliver Sacks and Stephen Jay Gould, Wilson handles a daunting range of scientific knowledge with a surprising deftness and a profound curiosity about human possibility. Provocative, illuminating, and delightful to read, *The Hand* encourages us to think in new ways about one of our most taken-for-granted assets. A mark of the book's excellence [is that] it makes the reader aware of the wonder in trivial, everyday acts, and reveals the complexity behind the simplest manipulation. --The Washington Post
