Aspects of the Cytoskeleton ,2011-09-02 This volume provides an overview of the cytoskeleton particularly on the fundamental role the cytoskeleton plays in the regulation of cell structure and function. This book represents new trends in cytoskeletal research that go beyond the traditional approach of identifying new proteins in the cytoskeleton, but actually define how these proteins interact with signaling pathways. While the major emphasis in this volume remains on the microfilament structure, some discussion has been included in this volume to illustrate the similarities and differences between the three cytoskeletal elements namely the actin microfilament, the intermediate filaments and the microtubules.

Stress Response Pathways in Cancer Georg T. Wondrak,2014-11-07 It is now established that dysregulated cell stress response pathways play a critical role in tumorigenesis, and a refined mechanistic understanding of this phenomenon at the molecular level promises to open new avenues for targeted therapeutic strategies that may benefit cancer patients in the near future. Coauthored by recognized leaders in cancer research from five continents, this novel book provides a comprehensive perspective on cell stress response pathways and therapeutic opportunities. Focusing on the role of genotoxic, proteotoxic, oxidative, metabolic, and inflammatory stress in tumorigenesis, the book is essential reading for students, basic researchers, and biomedical health care professionals interested in cancer and therapeutic development.

Molecular Oncology Edward P. Gelmann,Charles L. Sawyers, Frank J. Rauscher, III,2014 Reviews the origins of molecular oncology, including technologies for cancer analysis, key pathways in human malignancies, and available pharmacologic therapies.

Chemical Modulators of Protein Misfolding and Neurodegenerative Disease
Pierfausto Seneci, 2015-01-14 This book is a neurochemistry-based companion for Protein Misfolding and Neurodegenerative Diseases: Molecular Targets, an Elsevier title by the same author publishing in December 2014. While the first book focuses on biology and molecular targets, this companion book describes how these targets are regulated by small molecules and disease-modifying compounds. The book begins with a brief introduction to how key proteins become dysfunctional, and each subsequent chapter describes major disease mechanisms in Alzheimer's and other tauopathies. Properties and development status of these molecular targets and disease mechanisms are thoroughly described, as are small molecule effectors of autophagy and disaggregating agents. Written to provide comprehensive coverage of neurodegenerative disease-modifying compounds Provides discipline-specific chapters that cover medicinal chemistry and clinical applications Provides an overview of more than 200 chemical classes and lead compounds, acting on selected molecular targets that are of relevance to any neurodegenerative disorder Coverage of misfolding diseases, chaperone proteins, ubiquitination and autophagy/oncology makes this book suitable for structural neurochemists, chemists, biologists, non-CNS scientists, and scientists interested in drug discovery

Molecular Signatures of Infectious Agents in Cancer M. Verma,2002 The Cancer Biomarkers Research Group (CBRG) of the Division of Cancer Prevention (DCP), National Cancer Institute, sponsored a workshop entitled Molecular Signatures of Infectious Agents in Bethesda, Maryland, September 7 - 8, 2000, to identify molecular signatures of infectious agents and to utilize this information for risk assessment and development of prevention strategies against these infectious agents. The specific objectives of the workshop were to review state-of-the-science in detection technology that can identify extraneous genomic insertion in human cancers and to establish future research directions for using the molecular signatures of infectious agents for early detection, risk assessment and prevention of cancer.

Infectious Agents Associated Cancers: Epidemiology and Molecular Biology

Qiliang Cai,Zhenghong Yuan,Ke Lan,2017-10-20 This book offers a state-of-the-art report on recent discoveries concerning viral, bacterial, and parasite infectious cancers. Cancer is one of the most common causes of death and diseases in human populations, and 15%-25% of human cancers in worldwide are considered to result from chronic infection by pathogens. Most oncology textbooks address genetic mutation, but not infectious agents such as viruses, bacteria and parasites. As such this book stimulates further research in the new area between cancers and chronic infection, and discusses the epidemiology and molecular biology of infectious causes of cancers. It also explores the prevention and treatment of infection-related cancers, and brings pathogenic research to the forefront in the never-ending endeavor to understand how pathogens maneuver and negotiate in a complex environment, including the micro/macro- environment of the human host. Further, it

highlights the urgent need for a concerted program to develop vaccines and other diagnosis and interventions that will eventually help prevent and treat infectious cancers, and decrease their burden on human populations. It offers graduate students and researchers a comprehensive overview of the infectious causes of cancers.

Hepatitis B Virus in Human Diseases Yun-Fan Liaw, Fabien Zoulim, 2015-11-13
This text provides a comprehensive, state-of-the art review of this field, and will serve as a valuable resource for students, clinicians, and researchers with an interest in hepatitis B. The book reviews new data about basic and translational science including the viral life cycle, the immunopathogenesis of virus induced chronic hepatitis, the mechanism of virus induced liver cancer, and their potential applications for the clinical management of patients. The clinical aspects of this chronic viral infection are reviewed in detail with important chapters on the global epidemiology, the natural history of the disease, co-infections with its satellite virus HDV or HIV, and management of special patient populations. A major emphasis is made on the management of antiviral therapy and the recent international guidelines for the treatment of hepatitis B. Finally, the book reviews the current state of the art regarding immunoprophylaxis to prevent the spread of the virus and its major clinical consequences. The new advances and perspectives in the development of improved antiviral treatments are also discussed. Hepatitis B Virus in Human Diseases will serve as a very useful resource for students, physicians and researchers dealing with, and interested in, this challenging chronic viral infection. It will provide a concise yet comprehensive summary of the current status of the field that will help guide patient management and stimulate investigative efforts. All

chapters are written by experts in their fields and include the most up to date scientific and clinical information.

Numerical Modeling of Explosives and Propellants Charles L. Mader,2007-10-18 Major advances, both in modeling methods and in the computing power required to make those methods viable, have led to major breakthroughs in our ability to model the performance and vulnerability of explosives and propellants. In addition, the development of proton radiography during the last decade has provided researchers with a major new experimental tool for studying explosive and shock wave physics. Problems that were once considered intractable - such as the generation of water cavities, jets, and stems by explosives and projectiles - have now been solved. Numerical Modeling of Explosives and Propellants, Third Edition provides a complete overview of this rapidly emerging field, covering basic reactive fluid dynamics as well as the latest and most complex methods and findings. It also describes and evaluates Russian contributions to the experimental explosive physics database, which only recently have become available. This book comes with downloadable resources that contain- · FORTRAN and executable computer codes that operate under Microsoft® Windows Vista operating system and the OS X operating system for Apple computers · Windows Vista and MAC compatible movies and PowerPoint presentations for each chapter · Explosive and shock wave databases generated at the Los Alamos National Laboratory and the Russian Federal Nuclear Centers Charles Mader's three-pronged approach - through text, computer programs, and animations - imparts a thorough understanding of new computational methods and experimental measuring techniques, while also providing the tools to put

these methods to effective use.

Numerical Modeling of Explosives and Propellants, Second Edition Charles L. Mader, 1997-08-29 Charles Mader, a leading scientist who conducted theoretical research at Los Alamos National Laboratory for more than 30 years, sets a new standard with this reference on numerical modeling of explosives and propellants. This book updates and expands the information presented in the author's landmark work, Numerical Modeling of Detonations, published in 1979 and still in use today. Numerical Modeling of Explosives and Propellants incorporates the considerable changes the personal computer has brought to numerical modeling since the first book was published, and includes new three-dimensional modeling techniques and new information on propellant performance and vulnerability. Both an introduction to the physics and chemistry of explosives and propellants and a guide to numerical modeling of detonation and reactive fluid dynamics, Numerical Modeling of Explosives and Propellants offers scientists and engineers a complete picture of the current state of explosive and propellant technology and numerical modeling. The book is richly illustrated with figures that support the concepts, and filled with tables for quick access to precise data. The accompanying CD-ROM contains computer codes that are the national standard by which modeling is evaluated. Dynamic material properties data files and animation files are also included. There is no other book available today that offers this vital information.

Hepatitis B and D Protocols Robert K. Hamatake, Johnson Y. N. Lau, 2008-02-01 Despite the availability of an effective vaccine, there are still 400 million people, worldwide who are chronically infected with hepatitis B virus (HBV). For them, the vaccine, as currently applied, has no value. Given the possible

consequences of HBV infection, the number of those chronically infected with HBV presents an enormous public health challenge. For example, the major etiology of hepatocellular carcinoma (HCC) is chronic infection with HBV. Although fifth in cancer incidence, worldwide, HCC/liver cancer is the third leading cause of cancer death. The high mortality associated with HCC arises because the disease is often detected late and is unresponsive to treatment. The number of deaths caused by PHCC is expected to rise over the next 20 years. Those chronically infected with HBV have a life risk of death to HCC of between 10 and 25%. Even the limited efficacy of drugs for the treatment of chronic HBV helps underscore the point that this disease is responsive to therapy. Drugs that target the polymerase (e. g. , hepsera and lamivudine) and interferon alpha represent two distinct strategies and show that both conventional antiviral and immunotherapeutic approaches can be used in management. However, the current inventory of therapeutics is inadequate. Interferon alpha is of limited value, only parenterally available, and fraught with adverse reactions.

Hepatitis B Research Advances Alicia P. Willis, 2007 Hepatitis B is a disease of the liver caused by the Hepatitis B virus (HBV), a member of the Hepadnavirus family and one of several unrelated viral species which cause viral hepatitis. It was originally known as serum hepatitis and has caused epidemics in parts of Asia and Africa. This book presents the advances in the field.
