*A Life Lived and Laid Down for Friends* Don Erickson,2019-08-06 A Life Lived and Laid Down for Friends reflects on the iconoclastic life and ministry of Jesus of Nazareth. From the “riches in the rags” story of the nativity to his compassion-moved sacrifice to save his disciples, this book reflects on Jesus as first and foremost a spiritual teacher who embodied compassion. Pastor and author Don Erickson shows how the humility embodied by society’s most vulnerable was, for Jesus, the benchmark for inclusion in God’s kingdom. The book also looks at Jesus’ approach to religious pluralism, a reality he experienced in ancient Palestine under Roman rule. It was an approach that evidenced Jesus pointing to expressions of compassion, rather than to mere faith. In addition, the book examines the story of Jesus’ crucifixion and resurrection, offering a view that both asserts the centrality of the passion and bases it in historical context that avoids universalizing the story away. The crucifixion itself is shown to be a portrait of embodied, representative compassion that is salvific in its reach. Inspired by the powerful teachings of liberation theology, as well as a Buddhist-influenced approach to the Gospels, A Life Lived and Laid Down for Friends gives a fresh, poignant portrait of Jesus that defies Trump-America’s resistance to Jesus’ radically compassionate life and teaching.

**Emerging Ecosystem-Centric Business Models for Sustainable Value Creation** Ziouvelou, Xenia,McGroarty, Frank,2021-08-06 A hyperconnected, constantly evolving world has emerged. A world where people (internet of people), things (internet of things), and data (internet of data) are linked together, shaping the global economy while demanding new, innovative approaches for value creation. The era of hyper-connectivity is no longer characterized by centralized firm-centric business structures and traditional intra-firm and inter-firm processes. Open, distributed ecosystemic formations have started to emerge, utilizing cutting edge technologies to harness the collective power, co-creation ability, and intelligence of the crowd, the data, and the environment in an open participatory value co-creation mode. However, the question has become whether the frameworks, models, and tools that organizations use to create value will remain the same in the new business environment and within the organizations themselves. Existing literature on ecosystems, business models, and business model innovation are starting to examine these aspects. Emerging Ecosystem-Centric Business Models for Sustainable Value Creation explores emerging technology-enabled ecosystems and ecosystem-centric business models in theory and practice, from a business and technological perspective, and in a range of industrial settings, aiming to contribute to the existing knowledge of innovative technology-advanced ecosystems and business models, facilitating their design, implementation, and sustainable value creation. It examines the dynamics of this technology-powered revolution and how it is influencing the foundations of value creation and business modeling in novel ecosystemic formations across the HMD triangle: human, machine, and data. The target audience of this book is researchers and professionals in the fields of innovation, business, and strategy as well as computer science and information technology, along with managers, executives, practitioners, researchers, academicians, and students interested in new ways to create value in emerging and future ecosystems via innovative ecosystem-centric business models and strategies.

*Benchmarks* Algis Budrys,1985 Over the years since 1965, Algis Budrys has emerged as the leading critic of modern speculative fiction: insightful, eclectic, and notoriously uninhibited. *Benchmarks* collects the material that started it—all 54 Galaxy Bookshelf book-review columns Budrys created for the now-vanished Galaxy Magazine. Written for what was then the world’s leading SF periodical, these legendary summations and summary judgments coincided with the period when newsstand-borne science fiction and fantasy were evolving from pulp toward literature. Budrys’ Galaxy reviews trace an incisive, sometimes wickedly acerbic path through that sparsely charted literary territory. Budrys defines his standards and his function in his own words: “A book should be good. A bird should fly. “Writers of imperfect, tousled books should be made aware that standards of breeding and grooming exist. I strive to fulfill that function.”

*Advances in Dependability Engineering of Complex Systems* Wojciech Zamojski,Jacek Mazurkiewicz,Jarosław Sugier,Tomasz Walkowiak,Janusz Kacprzyk,2017-05-29 This book gathers the proceedings of the 2017 DepCoS-RELCOMEX, an annual conference series that has been organized by the Department of Computer Engineering at the Faculty of Electronics, Wrocław University of Science and Technology, since 2006. Its mission is to continue the heritage of the other two cycles of events – the RELCOMEX conferences (1977–89) and Microcomputer Schools (1985–95) – so this year we can celebrate the 40th anniversary of its origins. In contrast to those preceding series, which were focused on conventional reliability analysis, the goal of DepCoS is to promote a more comprehensive approach to system performability, which is now commonly called dependability. This innovative research area provides answers to the latest challenges in reliability evaluation for contemporary complex systems. Its novelty is based on a multi-disciplinary approach to system theory, technology and maintenance of systems operating in real environments. Dependability analyses concentrate on the efficient completion of tasks, services and jobs by a system considered as a combination of technical, information and human assets, in contrast to “classical” reliability, which is generally limited to the analysis of technical resources and associated components and structures. The selection of papers for this volume illustrates the diversity of topics that need to be considered, from mathematical models and design methodologies through software engineering and data security issues, to practical engineering problems in technical systems. In addition, this edition of the conference hosted the 7th CrISS-DESSERT Workshop, which was devoted to the analysis and assurance of safety and cyber security in critical infrastructure and computer systems.

*Hard to Love* Briallen Hopper,2019-02-05 A sharp and entertaining essay collection about the importance of multiple forms of love and friendship in a world designed for couples, from a laser-precise new voice. Sometimes it seems like there are two American creeds, self-reliance and marriage, and neither of them is mine. I experience myself as someone formed and sustained by others' love and patience, by student loans and stipends, by the kindness of strangers. Briallen Hopper's *Hard to Love* honors the categories of loves and relationships beyond marriage, the ones that are often treated as invisible or seen as secondary--friendships, kinship with adult siblings, care teams that form in times of illness, or various alternative family formations. She also values difficult and amorphous loves like loving a challenging job or inanimate objects that can't love you back. She draws from personal experience, sharing stories about her loving but combative family, the fiercely independent Emerson scholar who pushed her away, and the friends who have become her invented or found family; pop culture touchstones like the Women's March, John Green's *The Fault in Our Stars*, and the timeless series *Cheers*; and the work of writers like Joan Didion, Gwendolyn Brooks, Flannery O'Connor, and Herman Melville (*Moby-Dick* like you've never seen it!). *Hard to Love* pays homage and attention to unlikely friends and lovers both real and fictional. It is a series of love letters to the meaningful, if underappreciated, forms of intimacy and community that are tricky, tangled, and tough, but ultimately sustaining.
