**When the Scientist Presents** Jean-Luc Lebrun,2009-08-21 Check out the author's website at [www.scientific-presentations.com](http://www.scientific-presentations.com) This book looks at the presenting scientist from a novel angle: the presenter-host. When scientists give a talk, the audience (“guests”) expects the title of the talk to determine presentation content, they require understandable slides, and they demand visible and audible scientific authority. To each expectation corresponds a set of skills: personal (voice, host qualities, time control), technical (presentation tools and slide design), and scientific (Q&A, slide content). The author takes an original human factor view of the presentation delivery, in which the audience is easily distracted, rapidly forgetful, and increasingly impatient. Thus, insightful pointers are given on how to deliver the talk, how to craft the slides, and how to prevent the computer from rendering the presenting host-scientist into a “ghost”. In addition, the book goes in-depth over the treatment of questions by examining the motives and style of the questioners, and advising on how best to answer to each type of questioner. The book comes with a DVD for audio and video examples, and includes essential PowerPoint and Keynote techniques that a presenter cannot live without. Contents: Content Selection: Paper and Oral Presentation: The Difference Content Filtering Criteria Audience Expectations: General Audience Expectations Scientific Audience Expectations The Slides: Five Slide Types, Five Roles Slide Design The Presenter: The Master of Tools Scientist and Perfect Host The Grabbing Voice The Answerable Scientist Readership: Students, graduates, postgraduates, and professionals seeking help in improving their scientific presentation skills.

**How We Think** N. Katherine Hayles,2012-04-11 “How do we think?” N. Katherine Hayles poses this question at the beginning of this bracing exploration of the idea that we think through, with, and alongside media. As the age of print passes and new technologies appear every day, this proposition has become far more complicated, particularly for the traditionally print-based disciplines in the humanities and qualitative social sciences. With a rift growing between digital scholarship and its print-based counterpart, Hayles argues for contemporary technogenesis—the belief that humans and technics are coevolving—and advocates for what she calls comparative media studies, a new approach to locating digital work within print traditions and vice versa. Hayles examines the evolution of the field from the traditional humanities and how the digital humanities are changing academic scholarship, research, teaching, and publication. She goes on to depict the neurological consequences of working in digital media, where skimming and scanning, or “hyper reading,” and analysis through machine algorithms are forms of reading as valid as close reading once was. Hayles contends that we must recognize all three types of reading and understand the limitations and possibilities of each. In addition to illustrating what a comparative media perspective entails, Hayles explores the technogenesis spiral in its full complexity. She considers the effects of early databases such as telegraph code books and confronts our changing perceptions of time and space in the digital age, illustrating this through three innovative digital productions—Steve Tomasula’s electronic novel, *TOC*; Steven Hall’s *The Raw Shark Texts*; and Mark Z. Danielewski’s *Only Revolutions*. Deepening our understanding of the extraordinary transformative powers digital technologies have placed in the hands of humanists, *How We Think* presents a cogent rationale for tackling the challenges facing the humanities today.

**Gre Vocab Capacity** Vince Kotchian,Brian McElroy,2012-06-12 2015 version published on 12/29/14. Need a good way to remember that the word prodigal means wasteful? Just think of prada gal - a girl who spends all of her money on designer clothes. Brian McElroy (Harvard, '02) and Vince Kotchian (Boston College, '97), two of San Diego's most sought after test-prep tutors, provide a series of clever, unconventional, and funny memory devices aimed toward helping you to improve your vocabulary and remember words long-term so that you don't ever forget their meanings. Brian and Vince, combined, have been tutoring the test for over 20 years. They have analyzed all available official GRE tests to select the words that appear in this book. The vocabulary words in this book are best suited for students at a 9th-grade level or above. The words in this edition are specifically targeted toward the GRE exam, but they are also helpful for students who are preparing for other standardized tests such as the SAT, ACT, ISEE, SSAT, GMAT, LSAT or MCAT, or anyone at any age who simply wants to improve his/her knowledge of English vocabulary. Disclaimer: a few of our

mnemonics might not be appropriate for kids – some contain adult language or situations. Over 950 of the words in this book appear in our other mnemonics book, SAT Vocab Capacity. So if you're easily offended, the SAT version might be a better choice. Why This Book Is Different If you're studying for the GRE, SAT, or for any other standardized test that measures your vocabulary, you may be feeling a little bit anxious – especially if you've taken a practice test and encountered words you didn't know (or maybe never even saw before)! Whether you have seven days or seven months to prepare for the test, you're going to want to boost your vocabulary. But it's not that simple – you've got to remember the words you learn. And on many GRE text completion and sentence equivalence questions, getting the right answer comes down to knowing the precise definition of the words. You could make vocabulary flashcards. You could look up words you don't know. You could read a book with lots of big words. But unless you give your brain a way to hold on to the words you learn, it will probably have a harder time remembering them when they appear on the test. That's the problem with most vocabulary books: the definitions and sentences in the books aren't especially memorable. That's where this book is different. We've not only clearly defined the words but we've also created sentences designed to help you remember the words through a variety of associations - using mnemonics. Mnemonic Examples A mnemonic is just a memory device. It works by creating a link in your brain to something else, so that recall of one thing helps recall of the other. This can be done in many ways – but the strongest links are through senses, emotions, rhymes, and patterns. Consider this example: Quash (verb): to completely stop from happening. Think: squash. The best way to quash an invasion of ants in your kitchen is simple: squash them. Now your brain has a link from the word quash (which it may not have known) to the word squash (which it probably knows). Both words sound and look the same, so it's easy to create a visual and aural link. If you picture someone squashing ants (and maybe get grossed out), you also have another visual link and an emotional link. Here's another example: Eschew (verb): to avoid. Think: ah-choo! Eschew people who say ah-choo! unless you want to catch their colds. The word eschew sounds similar to a sneeze (ah-choo!), so your brain will now link the two sounds. If you picture yourself avoiding someone who is about to sneeze in your face, even better! Again, the more connections you make in your brain to the new word, the

**The State** Anthony De Jasay, 1998 The State is a brilliant analysis of some of the fundamental issues of modern political thought from the perspective, not of individuals or subjects, but of the state itself. The author poses the query, What would you do if you were the state? The state usually is understood as an instrument, not a personality, and it is presumed to exist so that people can achieve their common ends. However, Jasay asks, what if we suppose the state to have a will and ends of its own? To answer these questions, the author traces the logical and historical progression of the state from a modest-sized protector of life and property through its development into an agile seducer of democratic majorities, to the welfare-dispensing drudge that it is in many countries today ... Is the rational next step a totalitarian enhancement of its power? The State presents what has been termed a disturbingly logical 'agenda' for the state in pursuit of its 'self-fulfillment.'--Inside jacket flap.
