An Insider's Guide to the Mining Sector 1e Michael Coulson,2004 - In 2003, four mining shares rose over four times in price, with one gaining ten

times.- In just the first two months of 2004, 26 mining shares increased more than 20%, with five shares doubling.- Merrill Lynch's World Mining Trust is the UK's best performing fund over the past three years, having risen by over 200 per cent.But is the mining boom about to end?Not according to this book, by Michael Coulson, Chairman of the Association of Mining Analysts. Coulson argues that, if anything, we are still in the early stages of prolonged strength in mining stocks and despite what some commentators are saying, the boom is far from over.FROM THE BACK

COVERThe prospect of instant riches gives the mining sector an obvious glamour. And when the mining sector begins to run it can be an awesome sight and the excitement generated can be every bit as seductive and heady as that which enveloped markets during the internet boom. But due to the counter-cyclical nature of many mining stocks, they can also offer a valuable refuge when stock markets turn down. In this book, Michael Coulson gives a masterly overview of the sector, explains both the rewards and the pitfalls of investing in mining shares and argues convincingly that mining should once again form a core sector for all investors. The book is for anyone interested in mining, and particularly mining as an investment. Whilst it contains material which will be useful to even experienced followers of the sector, its main target is those who are interested in mining but perhaps not particularly familiar with the sector, and would like to know more. All the subjects are covered that are fundamental to acquiring sufficient knowledge about the miningsector to invest in it with confidence.While the mining s

Mineral Reference Manual Nickel,Nichols,2012-12-06 of a Roman numeral, an alphabetic character and an Arabic numeral. This designation constitutes the classification symbol based on the system in Mineralogische Tabellen by Hugo Strunz (a summary is shown in Appendix A). The Roman numeral and alphabetical character divide the minerals into broad groups based mainly on chemistry, with the silicate subdivision based on silicate polymerization. The Arabic numeral specifies the group to which a particular mineral belongs; a group is defined mainly on the basis of crystallographic similarities, but minerals with similar chemical compositions are sometimes included in the group even though they do not exhibit crystallographic affinities with other members of the class. The next entry gives the name of the author of the mineral and the date of its introduction into the literature. In some cases where a mineral has been redescribed or the name has been changed from the original, this entry will reflect the person and time when this was done. This is followed by a reference to what we have tried to make the latest, or most authoritative, literature report. We have attempted to include at least one reference for each species. If there is a second reference following the first, it will be a reference to the determination of the crystal structure. The abbreviations used in the references are given in Appendix B. The final entry, when present, gives the names of similar or related minerals and is preceded by the deSignation See also .
