### **Bayesian Hierarchical Space-Time Models with Application to Significant Wave Height**

Erik Vanem,2013-10-11 This book provides an example of a thorough statistical treatment of ocean wave data in space and time. It demonstrates how the flexible framework of Bayesian hierarchical space-time models can be applied to oceanographic processes such as significant wave height in order to describe dependence structures and uncertainties in the data. This monograph is a research book and it is partly cross-disciplinary. The methodology itself is firmly rooted in the statistical research tradition, based on probability theory and stochastic processes. However, that methodology has been applied to a problem in the field of physical oceanography, analyzing data for significant wave height, which is of crucial importance to ocean engineering disciplines. Indeed, the statistical properties of significant wave height are important for the design, construction and operation of ships and other marine and coastal structures. Furthermore, the book addresses the question of whether climate change has an effect of the ocean wave climate, and if so what that effect might be. Thus, this book is an important contribution to the ongoing debate on climate change, its implications and how to adapt to a changing climate, with a particular focus on the maritime industries and the marine environment. This book should be of value to anyone with an interest in the statistical modelling of environmental processes, and in particular to those with an interest in the ocean wave climate. It is written on a level that should be understandable to everyone with a basic background in statistics or elementary mathematics, and an introduction to some basic concepts is provided in the appendices for the uninitiated reader. The intended readership includes students and professionals involved in statistics, oceanography, ocean engineering, environmental research, climate sciences and risk assessment. Moreover, the book's findings are relevant for various stakeholders in the maritime industries such as design offices, classification societies, ship owners, yards and operators, flag states and intergovernmental agencies such as the IMO.

**Best of Enemies** Rainier George Weiner, 2015-05-07 Suppose fate placed you on an inflatable life-raft in the middle of the freezing Atlantic Ocean along with your most bitter enemy contrivable? Would the emotions of hatred, revenge and love of country trump the desire to survive, if killing that enemy ensured your own demise? Captain Mat Richardson, USN, and Emil Gluckler, a German submarine commander, experience that option during the 2nd World War. Mat, captain of a small destroyer, and Emil, commander of an attacking submarine, become stranded on a life-raft after each of the combatant crafts sink each other during a fierce naval engagement. They subsequently experience 38 harrowing days striving for survival. If nothing else, this required the ultimate in mutual cooperation. If the two survived, would the events have a lasting effect on their relationship? Or, if one had the opportunity to kill the other at a later date in a new war-time circumstance, would he do so, or not?

Political Participation and Democratic Capability in Authoritarian States Lien Pham, Ance Kaleja, 2023-05 This book provides an innovative theoretical and empirical exploration of the political participation and democratic capability of people living in authoritarian states. Merging perspectives from sociology and political science, the book demonstrates that despite autocratic restrictions on opposition, there is often still leeway for people to express themselves as political agents and to develop democratic capability. The first two chapters problematise political participation and develop an interdisciplinary three-domain framework that allows for critical engagement with and appreciation of the contexts and varied ways in which participatory activities occur. This framework is applied to analyse six country case studies: Singapore, Jordan, Belarus, Cuba, Nigeria, and Vietnam. Drawing on a range of data sources and different analytical entry points, the book investigates the substantive opportunities people have in exercising political agency and the implications for democratic capability. The book concludes by summarising the emergent themes and examining the potential of applying this method of inquiry in other political contexts. Encompassing both governmental and societal practices, the book offers insights into state-society relations and their role in constructing political values and goals for participation, which people negotiate and mediate to inform their choices, modes, and forms of civic engagement. These insights present a broad approach towards the study of participation, with relevance for understanding political participation in various societies under non-democratic and democratic rule alike. This book will be useful for researchers and students interested in political dynamics and intersections with economic, cultural, and social aspects of development. It will also be beneficial for practitioners interested in participatory actions and social change.

**8-Bit Apocalypse** Alex Rubens, 2019-09-10 Before *Call of Duty*, before *World of Warcraft*, before even *Super Mario Bros.*, the video game industry exploded in the late 1970s with the advent

of the video arcade. Leading the charge was Atari Inc., the creator of, among others, the iconic game Missile Command. The first game to double as a commentary on culture, Missile Command put the players' fingers on "the button," making them responsible for the fate of civilization in a no-win scenario, all for the price of a quarter. The game was marvel of modern culture, helping usher in both the age of the video game and the video game lifestyle. Its groundbreaking implications inspired a fanatical culture that persists to this day. As fascinating as the cultural reaction to Missile Command were the programmers behind it. Before the era of massive development teams and worship of figures like Steve Jobs, Atari was manufacturing arcade machines designed, written, and coded by individual designers. As earnings from their games entered the millions, these creators were celebrated as geniuses in their time; once dismissed as nerds and fanatics, they were now being interviewed for major publications, and partied like Wall Street traders. However, the toll on these programmers was high: developers worked 120-hour weeks, often opting to stay in the office for days on end while under a deadline. Missile Command creator David Theurer threw himself particularly fervently into his work, prompting not only declining health and a suffering relationship with his family, but frequent nightmares about nuclear annihilation. To truly tell the story from the inside, tech insider and writer Alex Rubens has interviewed numerous major figures from this time: Nolan Bushnell, founder of Atari; David Theurer, the creator of Missile Command; and Phil Klemmer, writer for the NBC series Chuck, who wrote an entire episode for the show about Missile Command and its mythical "kill screen." Taking readers back to the days of TaB cola, dot matrix printers, and digging through the couch for just one more quarter, Alex Rubens combines his knowledge of the tech industry and experience as a gaming journalist to conjure the wild silicon frontier of the 8-bit '80s. 8-Bit Apocalypse: The Untold Story of Atari's Missile Command offers the first in-depth, personal history of an era for which fans have a lot of nostalgia.
