Retire Early? Make the SMART Choices Steven A. Silbiger, 2009-10-13 Are You Considering Early Retirement? Do You Know Someone Who Is Considering This Momentous Decision? With *Retire Early? Make the SMART Choices*, Steven Silbiger, CPA, offers a short guide to the big issues of retirement planning—packed on every page with detailed, step-by-step advice. Choosing when to retire is one of the most important—and overlooked—decisions we will make about our lives. Silbiger, author of *The Ten-Day MBA*, has written the first guide that untangles the complicated issues surrounding early retirement, based on careful research about the money pitfalls retirees and near-retirees face. He delivers an understandable roadmap that demystifies the confusion about Social Security benefits, and clarifies the choices for anyone considering when and how to retire. Are you thinking about getting the early Social Security check? It can be tempting, but for many this can be a foolhardy decision. For others, it makes perfect sense. Making the smart choice about when to retire can make a \$100,000 difference for an individual and \$200,000 for a couple. Silbiger guides readers through the key variables that affect the decision to elect early Social Security retirement benefits: What are your early benefits and penalties? How's your health? Are you married? Are you planning on working while retired? What are your cash needs during retirement? By getting a grip on how to manage our investments, cash flow, and real estate, Silbiger shows how we can put thousands of dollars more into our pockets every year. He addresses vital questions about money and retirement that include: Tapping your nest egg for retirement—how to make ends meet? Which retirement investments are for you? Are you prepared to fend off scam artists? Through it all, you'll meet everyday people who have faced the early retirement question and learned how to make the smart choices. Silbiger provides the tools, worksheets, and assessments to avoid costly mistakes, take charge of your financial future, and choose the path to a secure, happy retirement.

Plant Polyphenols Richard W. Hemingway, Peter E. Laks, 2012-12-06 This book was developed from the proceedings of the 2nd North American Tannin Conference held in Houghton, Michigan, June, 1991. The objective of this conference was to bring together people with a common interest in plant polyphenols and to promote interdisciplinary interactions that will lead to a better understanding of the importance of these substances. Another objective of this conference was to extend the 'tannin family' by making special efforts to encourage participation by scientists outside the United States, obtain more coverage of the hydrolyzable tannins, and further broaden the

scope of coverage from the initial concentration on forestry and forest products. Comparison of the contents of this book with 'Chemistry and Significance of Condensed Tannins' that resulted from the proceedings of the 1st North American Tannin Conference shows the degree that these objectives were met. In developing the second conference, care was taken to assure that this book extends rather than duplicates the coverage of the first conference. Therefore, the two books should be taken together to obtain an up to date coverage of the broad area of chemistry and significance of plant polyphenols. Our thanks go to the authors who so kindly contributed chapters and so patiently responded to our requests. We thank the Conference Assistance Staff of Michigan Technological University for their help in planning and conducting the conference.

Recognition of Carbohydrates in Biological Systems, Part A: General Procedures Y. C. Lee, Reiko T. Lee, 2003-09-15 Recognition of carbohydrates in biological systems has been gaining more and more attention in recent years. Although methodology for studying recognition has been developing, there is no volume that covers the wide area of methodology of carbohydrate recognition. This volume, *Recognition of Carbohydrates in Biological Systems, Part A: General Procedures*, and its companion, Volume 363, present state-of-the-art methodologies, as well as the most recent biological observations in this area. Covers the isolation/synthesis of substances used in studying interactions involving carbohydrates Discussed the methodology for measuring such interactions Biological roles for such interactions are also covered

Handbook of Spectroscopy J. W. Robinson, 2019-08-08 The principle objective of this handbook is to provide a readily accessible source of information on the major fields of spectroscopy. Specifically, these fields are NMR, IR, Raman, UV (absorption and fluorescence), ESCA, X-Ray (absorption diffraction fluorescence), mass spectrometry, atomic absorption, flame photometry, emission spectrography, and flame spectroscopy. It will be of particular use to analytical, organic, inorganic chemists or spectroscopists wishing to identify materials or compounds. The book will indicate to them which techniques may provide useful information and what kind of information will and will not be provided. In short, it will be a companion to those spectroscopists who have need to broaden their horizons into the major fields discussed.

Carbohydrate Chemistry Amelia Pilar Rauter, Thisbe Lindhorst, 2013-06-17 In this volume, glycochemistry and glycobiology have been combined to demonstrate the contribution of organic chemistry, modern analytics, biological and biochemical expertise to the increasingly important field of glycomics. A polysaccharide immunomodulator with therapeutic implications, carbohydrate vaccines, new findings emphasizing the influence of carbohydrate decoration on the regulation of inflammatory response and new therapeutic approaches in the treatment of acute and chronic inflammatory diseases, recent progress on glycoengineering based on a glycosylation strategy to optimize protein drugs, congenital disorders of glycosylation, and key aspects of the glycosylation changes associated with bladder cancer are amongst the subjects presented in this volume. The contribution of glycochemistry to innovation in glycosciences is shown with chapters covering highly functionalized exo-glycals for the generation of molecular diversity in a chemoselective manner, imino sugar glycosidase inhibitors, carbasugars, multivalent glycoconjugates, including glycodendrimers, glyconanotubes, and glyconanoparticles, and their uses in medicinal chemistry, as well as artificial saccharide-based and saccharide-functionalized gene delivery systems. Siderophores based on monosaccharides (which have proven effective for Gram-negative bacteria and mycobacteria), and the so-called smart materials, (which can modulate and control cell behaviour), complete the volume. Volume 39 of Carbohydrate Chemistry - Chemical and Biological Approaches contains contributions ranging from glycochemistry to glycobiology. This collection demonstrates in a meaningful way how the interdisciplinary approach of an international glyconetwork can advance the field of carbohydrate research in Europe and worldwide.

Fortschritte der Chemie organischer Naturstoffe / Progress in the Chemistry of Organic Natural Products, 2012-12-06 The volumes in this classic series, now referred to simply as Zechmeister after its founder, L. Zechmeister, have appeared under the Springer Imprint ever since the series' inauguration in 1938. The volumes contain contributions on various topics related to the origin, distribution, chemistry, synthesis, biochemistry, function or use of various classes of naturally occurring substances ranging from small molecules to biopolymers. Each contribution is written by a recognized authority in this field and provides a comprehensive and up-to-date review of the topic in question. Addressed to biologists, technologists and chemists alike, the series can be used by the expert as a source of information and literature citations and by the non-expert as a means of orientation in a rapidly developing discipline.

Scaling Gary Maranell, 2017-07-05 Despite the obvious importance of measurement in any scientific endeavor, few students of the social sciences receive adequate training in the principles and problems of assigning numerical values to the subjects, objects, events, groups and operations they study, and still less in the process of translating theoretical ideas and concepts into variables. This kind of casualness with respect to measurement is often in marked contrast to their methodically designed research, which has grown out of subtle and sophisticated theoretical consideration. Scaling is intended to remedy this deficiency by providing a broad and detailed description of the major processes for developing measurement scales. The chapters, which include both classics in

the field and the best of modern work, require no great mathematical sophistication, and go well beyond the conventional study of attitudes to the more general uses of scaling. They enable the student and researcher to examine the development of measures of scalability and the problems and weaknesses they present, to become familiar with the development of tests of significance for reproducibility and scalability and the need for them, and to examine the lively history of the subject and experience the excitement that can be secured from sharing with a creative author the first report of his insight. Part One presents a series of general articles that deal in philosophic terms with the problem of measurement, with what is meant by measurement and scaling as well as the notions underlying the process of measuring. Part Two deals with the scaling methods developed by L. L. Thurstone, including paired comparison scaling, equal-appearing interval scaling, and successive interval scaling. The third part focuses upon scalogram analysis, presenting the background, rationale and procedures for Guttman scaling. The fourth part is concerned with summated rating, or Likert scaling. Part Five is a consideration of unfold

Natural Products as Antiviral Agents C.K. Chu, H.G. Cutler, 2013-11-11 During the past fifty years, thousands of natural products have been isolated from plants, fungi, and bacteria. Apart from intense searches by pharmaceutical companies for medicinals and the concentrated effort mounted by the National Cancer Institute, many of these have not been tested in biological systems. The major reasons for this appear to be, at least, twofold. First, individual researchers looking for biologically active natural products will often isolate only small amounts of material sufficient to determine a structure and calculate the specific activity for their particular bioassay systems: insufficient funds preclude re-isolating the compound unless industrial potential is foreseen. Second, the difficulty with which original structures were proved prior to 1972. This required the isolation of relatively large quantities of a natural product and there followed extensive degradation, elemental analyses of the parent and its fragments, then synthesis, piece by piece, of the molecule. All this took time and energy. No wonder that when the structure was proved the chemist was enervated. And coupled to this was the fact that many chemists were not trained to test their materials in biological systems. In contrast, today a natural product can be isolated, its mass and molecular formula determined and, if there is some serendipity, crystals may be obtained for single crystal x-ray analysis. If conditions are near perfect, it is possible to isolate and identify a novel compound in a month.

To Stand with the Nations of the World Mark Ravina, 2017-09-15 The samurai radicals who overthrew the last shogun in 1868 promised to restore ancient and pure Japanese ways. Foreign observers were terrified that Japan would lapse into violent xenophobia. But the new Meiji government took an opposite course. It copied best practices from around the world, building a powerful and modern Japanese nation with the help of European and American advisors. While revering the Japanese past, the Meiji government boldly embraced the foreign and the new. What explains this paradox? How could Japan's 1868 revolution be both modern and traditional, both xenophobic and cosmopolitan? *To Stand with the Nations of the World* explains the paradox of the Restoration through the forces of globalization. The Meiji Restoration was part of the global long nineteenth century during which ambitious nation states like

Japan, Britain, Germany, and the United States challenged the world's great multi-ethnic empires--Ottoman, Qing, Romanov, and Hapsburg. Japan's leaders wanted to celebrate Japanese uniqueness, but they also sought international recognition. Rather than simply mimic world powers like Britain, they sought to make Japan distinctly Japanese in the same way that Britain was distinctly British. Rather than sing God Save the King, they created a Japanese national anthem with lyrics from ancient poetry, but Western-style music. The Restoration also resonated with Japan's ancient past. In the 600s and 700s, Japan was threatened by the Tang dynasty, a dynasty as powerful as the Roman empire. In order to resist the Tang, Japanese leaders borrowed Tang methods, building a centralized Japanese state on Tang models, and learning continental science and technology. As in the 1800s, Japan co-opted international norms while insisting on Japanese distinctiveness. When confronting globalization in 1800s, Japan looked back to that ancient globalization of the 600s and 700s. The ancient past was therefore not remote or distant, but immediate and vital.

Carbohydrate Chemistry Yves Queneau,A Pilar Rauter,Thisbe Lindhorst,2014-03-25 Volume 40 of Carbohydrate Chemistry: Chemical and Biological Approaches demonstrates the importance of the glycosciences for innovation and societal progress. Carbohydrates are molecules with essential roles in biology and also serve as renewable resources for the generation of new chemicals and materials. Honouring Professor André Lubineau's memory, this volume resembles a special collection of contributions in the fields of green and low-carbon chemistry, innovative synthetic methodology and design of carbohydrate architectures for medicinal and biological chemistry. Green methodology is illustrated by accounts on the industrial development of water-promoted reactions (C-glycosylation, cycloadditions) and the design of green processes and synthons towards sugar-based surfactants and materials. The especially challenging transformations at the anomeric center are presented in several contributions on glycosylation methodologies using iron or gold catalysis, electrochemical or enzymatic (thio)glycosylation, exo-glycal chemistry and bioengineering of carbohydrate synthases. Then, synthesis and structure of multivalent and supramolecular oligosaccharide architectures are discussed and related to their physical properties and application potential, e.g. for deepening our understanding of biological processes, such as enzymatic pathways or bacterial adhesion, and design of antibacterial, antifungal and innovative anticancer vaccines or drugs.
