Astronomy As a Hobby Andrew Fraknoi,1986-11-01

**Astronomy with a Home Computer** Neale Monks,2005-03-03 Here is a one-volume guide to just about everything computer-related for amateur astronomers! Today's amateur astronomy is inextricably linked to personal computers. Computer-controlled go-to telescopes are inexpensive. CCD and webcam imaging make intensive use of the technology for capturing and processing images. Planetarium software provides information and an easy interface for telescopes. The Internet offers links to other astronomers, information, and software. The list goes on and on. Find out here how to choose the best planetarium program: are commercial versions really better than freeware? Learn how to optimise a go-to telescope, or connect it to a lap-top. Discover how to choose the best webcam and use it with your telescope. Create a mosaic of the Moon, or high-resolution images of the planets... Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer, whether it is running Microsoft Windows, Mac O/S or Linux. It doesn't matter what kind of telescope you own either - a small refractor is just as useful as a big go-to SCT for most of the projects in this book.

Astronomy for Amateurs Camille Flammarion,2011-05 Amateur astronomy, also called backyard astronomy and stargazing, is a hobby whose participants enjoy watching the night sky (for sunspots, eclipses, etc.), mainly with portable telescopes. Even though scientific research is not their main goal, many amateur astronomers make a contribution to astronomy by monitoring variable stars, tracking asteroids and discovering transient objects, such as comets. This book is a perfect introduction to Astronomy for amateurs. Written in the 19th century by French Astronomer Camille Flammarion, it is surprisingly complete and up-to-date. It is still used by both professional and amateur astronomers around the world.

**Practical Projects for Astronomers** Neil Wyatt,2021-04-26 Astronomy and astrophotography are fascinating hobbies. It is possible to create and enhance astronomical equipment and accessories using techniques and materials accessible to the hobbyist metalworker or model engineer. Written by an amateur astronomer and experienced hobby engineer, this wide-ranging book presents tried and tested ideas from the simplest of gadgets to advanced projects. Includes how to design and make refracting telescopes and how to make a Newtonian reflector around a mirror set. Instructions are given on making different types of eyepiece using stock lenses and making gadgets for collimation, polar alignment, focusing, sky quality metering and much more. Information is given on improving the performance of mounts and tripods and how to cool cameras and improve their performance for long-exposure photography. Details are given on making an equatorial platform for Dobsonian telescopes and using Arduinos and other electronic modules as part of your projects.

**Cosmic Challenge** Philip S. Harrington,2010-10-21 Listing more than 500 sky targets, both near and far, in 187 challenges, this observing guide will test novice astronomers and advanced veterans alike. Its unique mix of Solar System and deep-sky targets will have observers hunting for the Apollo lunar landing sites, searching for satellites orbiting the outermost planets, and exploring hundreds of star clusters, nebulae, distant galaxies, and quasars. Each target object is accompanied by a rating indicating how difficult the object is to find, an in-depth visual description, an illustration showing how the object realistically looks, and a detailed finder chart to help you find each challenge quickly and effectively. The guide introduces objects often overlooked in other observing guides and features targets visible in a variety of conditions, from the inner city to the dark countryside. Challenges are provided for the naked eye, through binoculars and the largest backyard telescopes.

The Backyard Astronomer's Guide Terence Dickinson,Alan Dyer,2021-09-15 The touchstone for contemporary stargazers. This classic, groundbreaking guide has been the go-to field guide for both beginning and experienced amateur astronomers for nearly 30 years. The fourth edition brings Terence Dickinson and Alan Dyer's invaluable manual completely up-to-date. Setting a new standard for astronomy guides, it will serve as the touchstone for the next generation of stargazers as well as longtime devotees. Technology and astronomical understanding are evolving at a breathtaking clip, and to reflect the latest information about observing techniques and equipment, this massively revised and expanded edition has been completely rebuilt (an additional 48 pages brings the page count to 416). Illustrated throughout with all-new photographs and star charts, this edition boasts a refreshed design and features five brand-new chapters, including three essential essays on binocular, telescope and Moon tours by renowned astronomy writer Ken Hewitt-White. With new content on naked-eye sky sights, LED lighting technology, WiFi-enabled telescopes and the latest advances in binoculars, telescopes and other astronomical gear, the fourth edition of The Backyard Astronomer's Guide is sure to become an indispensable reference for all levels of stargazers. New techniques for observing the Sun, the Moon and solar and lunar eclipses are an especially timely addition, given the upcoming solar eclipses in 2023 and 2024. Rounding out these impressive offerings are new sections on dark sky reserves, astro-tourism, modern astrophotography and cellphone astrophotography, making this book an enduring must-have guide for anyone looking to improve his or her astronomical viewing experience. The Backyard Astronomer's Guide also features a foreword by Dr. Sara Seager, a Canadian-American astrophysicist and planetary scientist at the Massachusetts Institute of Technology and an internationally recognized expert in the search for exoplanets.

**The Future Happens Twice** Matt Browne,2007 Debrya Handson, a 33-year-old professor in computational linguistics at the University of Minnesota, is ready for a career change. She decides to leave her academic post and move to Nevada, where she joins a top secret project that is being sponsored by the American government. Using powerful telescopes on the far side of the Moon, the project's astronomers have discovered an Earth-like planet that is eighty-two light years away; simultaneously, a major breakthrough in bio- engineering presents the project with the unique opportunity of long-distance space travel. At first Debrya has no idea why the study of language is to play such a central role, and why twin studies are also so important. During her orientation week she discovers a disturbing secret that makes her wish she had never joined the project. Soon she is faced with the dilemma of revealing the dark secrets of the project or being part of the most ambitious undertaking in the history of humankind. Matt Browne's beautifully worked space epic explores the bounds of human hope and plumbs the depths of human duplicity. Tender relationships between the budding astronauts are pitched against the disillusion they feel when an embattled President confronts them with their true origins and purpose. The author's fascination with the fields of bioengineering and information technology sustains the reader's interest all the way through this roller-coaster ride. The adventures continue in parts II and III of Matt Browne's thrilling trilogy, The Future Happens Twice - Human Destiny and The Andromeda Encounter.
