Music Play Alison M. Reynolds,Edwin E. Gordon,1998 Children are naturally fascinated with sound and movement play as they teach themselves how to function in the world. Every child has the potential to learn music. Without early, sequential music development guidance, however, the potential for true music understanding and enjoyment is left underdeveloped among most children. This music series, based on A Music Learning Theory for Newborn and Young Children and years of practical and experimental research, is designed to assist teachers, parents, and caregivers of newborn and young children in the development of basic music skills such as singing, rhythm chanting, and moving. By using this compilation of music and movement activities you will discover the pure delight of playing music and movement games with children. You will learn how to provide a rich music environment for them, how to listen and understand the sounds they make, and how to reinforce each child's music and movement creativity through imitation and improvisation using audiation, the ability each of us has to think music.
