Computer and Machine Vision E. R. Davies,2012-03-05 Computer and Machine Vision: Theory, Algorithms, Practicalities (previously entitled Machine Vision) clearly and systematically presents the basic methodology of computer and machine vision, covering the essential elements of the theory while emphasizing algorithmic and practical design constraints. This fully revised fourth edition has brought in more of the concepts and applications of computer vision, making it a very comprehensive and up-to-date tutorial text suitable for graduate students, researchers and R&D engineers working in this vibrant subject. Key features include: Practical examples and case studies give the 'ins and outs' of developing real-world vision systems, giving engineers the realities of implementing the principles in practice. New chapters containing case studies on surveillance and driver assistance systems give practical methods on these cutting-edge applications in computer vision. Necessary mathematics and essential theory are made approachable by careful explanations and well-illustrated examples. Updated content and new sections cover topics such as human iris location, image stitching, line detection using RANSAC, performance measures, and hyperspectral imaging. The 'recent developments' section now included in each chapter will be useful in bringing students and practitioners up to date with the subject. Roy Davies is Emeritus Professor of Machine Vision at Royal Holloway, University of London. He has worked on many aspects of vision, from feature detection to robust, real-time implementations of practical vision tasks. His interests include automated visual inspection, surveillance, vehicle guidance and crime detection. He has published more than 200 papers, and three books - Machine Vision: Theory, Algorithms, Practicalities (1990), Electronics, Noise and Signal Recovery (1993), and Image Processing for the Food Industry (2000); the first of these has been widely used internationally for more than 20 years, and is now out in this much enhanced fourth edition. Roy holds a DSc at the University of London, and has been awarded Distinguished Fellow of the British Machine Vision Association, and Fellow of the International Association of Pattern Recognition.

Francis Bacon Mark Stevens,Annalyn Swan,2021-03-23 THE TIMES ART BOOK OF THE YEAR Named one of The Irish Times' Books of the Year for 2021 A compelling and comprehensive look at the life and art of Francis Bacon, one of the iconic painters of the twentieth century—from the Pulitzer Prize-winning authors of *de Kooning: An American Master*. This intimate study of the singularly private, darkly funny, eruptive man and his extraordinary art “is bejeweled with sensuous detail ... the iconoclastic charm of the artist keeps the pages turning” (The Washington Post). “A definitive life of Francis Bacon ... Stevens and Swan are vivid scene setters ... Francis Bacon does justice to the contradictions of both the man and the art.” —The Boston Globe Francis Bacon created an indelible image of mankind in modern times, and played an outsized role in both twentieth century art and life—from his public emergence with his legendary Triptych 1944 (its images so unrelievedly awful that people fled the gallery), to his death in Madrid in 1992. Bacon was a witty free spirit and unabashed homosexual at a time when many others remained closeted, and his exploits were as unforgettable as his images. He moved among the worlds of London's Soho and East End, the literary salons of London and Paris, and the homosexual life of Tangier. Through hundreds of interviews, and extensive new research, the authors probe Bacon's childhood in Ireland (he earned his father's lasting disdain because his asthma prevented him from hunting); his increasingly open homosexuality; his early design career—never before explored in detail; the formation of his vision; his early failure as an artist; his uneasy relationship with American abstract art; and his improbable late emergence onto the international stage as one of the great visionaries of the twentieth century. In all, *Francis Bacon: Revelations* gives us a more complete and nuanced—and more international—portrait than ever before of this singularly private, darkly funny, eruptive man and his equally eruptive, extraordinary art. Bacon was not just an influential artist, he helped remake the twentieth-century figure.

Fish4Knowledge: Collecting and Analyzing Massive Coral Reef Fish Video Data Robert B. Fisher,Yun-Heh Chen-Burger,Daniela Giordano,Lynda Hardman,Fang-Pang Lin,2016-03-24 This book gives a start-to-finish overview of the whole Fish4Knowledge project, in 18 short chapters, each describing one aspect of the project. The Fish4Knowledge project explored the possibilities of big video data, in this case from undersea video. Recording and analyzing 90 thousand hours of video from ten camera locations, the project gives a 3 year view of fish abundance in several tropical coral reefs off the coast of Taiwan. The research system built a remote recording network, over 100 Tb of storage, supercomputer processing, video target detection and tracking, fish species recognition and analysis, a large SQL database to record the results and an efficient retrieval mechanism. Novel user interface mechanisms were developed to provide easy access for marine ecologists, who wanted to explore the dataset. The book is a useful resource for system builders, as it gives an overview of the many new methods that were created to build the Fish4Knowledge system in a manner that also allows readers to see how all the components fit together.

Self-Organizing Maps Teuvo Kohonen,2012-12-06 The Self-Organizing Map (SOM), with its variants, is the most popular artificial neural network algorithm in the unsupervised learning category.

About 4000 research articles on it have appeared in the open literature, and many industrial projects use the SOM as a tool for solving hard real world problems. Many fields of science have adopted the SOM as a standard analytical tool: statistics, signal processing, control theory, financial analyses, experimental physics, chemistry and medicine. This new edition includes a survey of over 2000 contemporary studies to cover the newest results. Case examples are provided with detailed formulae, illustrations, and tables. Further, a new chapter on software tools for SOM has been included whilst other chapters have been extended and reorganised.

The Book of (More) Delights Ross Gay,2023-09-19 **Named a Best Book of the Year by The Boston Globe, Garden & Gun, Electric Literature, and St. Louis Public Radio** The New York Times bestselling author of *The Book of Delights* and *Inciting Joy* is back with exactly the book we need in these unsettling times. Margaret Roach of The New York Times says, “Yes, please. I'll have another dose of delight.” In Ross Gay’s new collection of small, daily wonders, again written over the course of a year, one of America’s most original voices continues his ongoing investigation of delight. For Gay, what delights us is what connects us, what gives us meaning, from the joy of hearing a nostalgic song blasting from a passing car to the pleasure of refusing the “nefarious” scannable QR code menus, from the tiny dog he fell hard for to his mother baking a dozen kinds of cookies for her grandchildren. As always, Gay revels in the natural world—sweet potatoes being harvested, a hummingbird carousing in the beebalm, a sunflower growing out of a wall around the cemetery, the shared bounty from a neighbor’s fig tree—and the trillion mysterious ways this glorious earth delights us. *The Book of (More) Delights* is a volume to savor and share.

XML Primer Plus Nicholas Chase,2003 This handbook presents XML programming from a conceptual perspective, teaching not just the technology, but the background and thinking behind it. Developers learn to do it right, gaining an understanding of the hows and the whys. Rather than teaching programmers to memorize specific APIs, Chase teaches them how to think about XML programming in a language-neutral way.
