This book presents everything in conceptual terms that you can understand, rather than tips to be committed raw to memory. You will learn everyday tasks ranging from basic system administration—partitioning and mounting filesystems, software installation, network configuration, working from the command line) – to Bourne shell scripting, using graphical applications, as well as fanciful things such as emulation layers for Windows and Linux and virtualization with VirtualBox. It's now 50 years since the creation of Unix but it is still growing. As Unix now moves to everyone's OS (open-source FreeBSD/Linux), it is the perfect time to start your journey with Beginning

Modern Unix as your guide. What You'll Learn Live comfortably in a modern Unix environment, both on the command-line and in the graphical world. Choose the right hardware for Unix Work with Unix in real world settings Develop Unix applications Review advanced techniques in Shell scripting Who This Book Is For Everyone who uses a computer – those who intend to migrate to Unix as well as those who are worried about migrating to Unix, perhaps fearing it is a pure command-line or ‘difficult’ world.

*Natural Language Processing and Information Systems* Helmut Horacek, Elisabeth Metais, Rafael Munoz, Magdalena Wolska, 2010-04-11 This volume contains the papers presented at NLDB 2009, the 14th International Conference on Applications of Natural Language to Information Systems held June 24–26, 2009, at the University of the Saarland and the German Research Center for Artificial Intelligence in Saarbrücken, Germany. In addition to reviewed submissions, the program also included contributions to the doctoral symposium held during NLDB 2009 as well as two invited talks. These talks covered some of the currently hot topics in the use of natural language for accessing information systems.

We received 51 submissions as regular papers for the main conference, 2 extra submissions as posters, and 3

short papers for the doctoral symposium. Each paper for the main conference was assigned four reviewers, taking into account preferences expressed by the ProgramCommittee members as much as possible. Within the review deadline, we received at least three reviews for almost all submissions. After the review deadline, the Conference Organizing Committee members and the Program Committee Chair acted as meta-reviewers. This task included studying the reviews and the papers, specifically those whose assessment made them borderline cases, and discussing conflicting opinions and their impact on theassessmentofindividualpapers.Finally,themetareviewerswroteadditional reviews for the few papers which received less than three reviews, as well as for papers which received reviews with considerably conflicting assessments.
