Lecture Notes in Cosmology Oliver Piatella,2018-07-21 Cosmology has become a very active research field in the last decades thanks to the impressive improvement of our observational techniques which have led to landmark discoveries such as the accelerated expansion of the universe, and have put physicists in front of new mysteries to unveil, such as the quest after the nature of dark matter and dark energy. These notes offer an approach to cosmology, covering fundamental topics in the field: the expansion of the universe, the thermal history, the evolution of small cosmological perturbations and the anisotropies in the cosmic microwave background radiation. Some extra topics are presented in the penultimate chapter and some standard results of physics and mathematics are available in the last chapter in order to provide a self-contained treatment. These notes offer an in-depth account of the above-mentioned topics and are aimed to graduate students who want to build an expertise in cosmology.

Beyond Territory Harald Bathelt,Maryann Feldman,Dieter F. Kogler,2012-03-29 The main purpose of the book is to discuss new trends in the dynamic geography of innovation and argue that in an era of increasing globalization, two trends seem quite dominant: rigid territorial models of innovation, and localized configurations of innovative activities. The book brings together scholars who are working on these topics. Rather than focusing on established concepts and theories, the book aims to question narrow explanations, rigid territorializations, and simplistic policy frameworks; it provides evidence that innovation, while not exclusively dependent on regional contexts, can be influenced by place-specific attributes. The book will bring together new empirical and conceptual work by an interdisciplinary group of leading scholars from areas such as economic geography, innovation studies, and political science. Based on recent discussions surrounding innovation systems of different types, it aims to synthesize state-of-the-art know-how and provide new perspectives on the role of innovation and knowledge creation in the global political economy.

Neural Network Engineering in Dynamic Control Systems Kenneth J. Hunt,George R. Irwin,Kevin Warwick,2012-12-06 The series Advances in Industrial Control aims to report and encourage technology transfer in control engineering. The rapid development of control technology impacts all areas of the control discipline. New theory, new controllers, actuators, sensors, new industrial processes, computer methods, new applications, new philosophies, , new challenges. Much of this development work resides in industrial reports, feasibility study papers and the reports of advanced collaborative projects. The series offers an opportunity for researchers to present an extended exposition of such new work in all aspects of industrial control for wider and rapid dissemination. Within the control community there has been much discussion of and interest in the new Emerging Technologies and Methods. Neural networks along with Fuzzy Logic and Expert Systems is an emerging methodology which has the potential to contribute to the development of intelligent control technologies. This volume of some thirteen chapters edited by Kenneth Hunt, George Irwin and Kevin Warwick makes a useful contribution to the literature of neural network methods and applications. The chapters are arranged systematically progressing from theoretical foundations, through the training aspects of neural nets and concluding with four chapters of applications. The applications include problems as diverse as oven temperature control, and energy/load forecasting routines. We hope this interesting but balanced mix of material appeals to a wide range of readers from the theoretician to the industrial applications engineer.

Learning and Innovation in Organizations and Economies Bart Nooteboom, 2000-10-26 This book develops a general 'logic', or heuristic of discovery, to explain the emergence of novelty in individual thought, organizations, industries, and economies. It draws on a variety of literatures, discussing theories of organizational learning, evolutionary and institutional economics, knowledge and language. It brings these together in a unifying framework, and applies that for an analysis of innovation systems and the management of learning. Unification is based on the resource or competence-based view in economics, in combination with a theory of learning by interaction. The central theme of the book is the relation between stability and change. In business literature this theme appears in the relation between exploitation and exploration. In evolutionary economics it appears in the relation between selection and adaptation. The general heuristic shows how exploitation can provide the basis for exploration. The analysis is illustrated with many phenomena and empirical results from the different literatures.

Power System Analysis Power System Analysis T. K. Nagsarkar, 2016-07 The second edition of Power System Analysis serves as a basic text for undergraduate students of electrical engineering. It provides a thorough understanding of the basic principles and techniques of power system analysis as well as their application to real-world problems. Beginning with the basic concepts, the book gives an exhaustive coverage of transmission line parameters, simulation of power system elements, steady-state performance and travelling wave phenomena on transmission lines, symmetrical and unsymmetrical fault analyses, power flow studies, power system control, and stability analysis. The book extensively illustrates the use of MATLAB in the analysis of power systems. Owing to its lucid style and presentation of advanced topics, the book will be useful to postgraduate students as also to practising engineers.

Geometric and Algebraic Structures in Differential Equations P.H. Kersten, 1995-11-30 The geometrical theory of nonlinear differential equations originates from classical works by S. Lie and A. Bäcklund. It obtained a new impulse in the sixties when the complete integrability of the Korteweg-de Vries equation was found and it became clear that some basic and quite general geometrical and algebraic structures govern this property of integrability. Nowadays the geometrical and algebraic approach to partial differential equations constitutes a special branch of modern mathematics. In 1993, a workshop on algebra and geometry of differential equations took place at the University of Twente (The Netherlands), where the state-of-the-art of the main problems was fixed. This book contains a collection of invited lectures presented at this workshop. The material presented is of interest to those who work in pure and applied mathematics and especially in mathematical physics.

A Classical Introduction to Modern Number Theory K. Ireland, M. Rosen, 2013-03-09 This book is a revised and greatly expanded version of our book Elements of Number Theory published in 1972. As with the first book the primary audience we envisage consists of upper level undergraduate mathematics majors and graduate students. We have assumed some familiarity with the material in a standard undergraduate course in abstract algebra. A large portion of Chapters 1-11 can be read even without such background with the aid of a small amount of supplementary reading. The later chapters assume some knowledge of Galois theory, and in Chapters 16 and 18 an acquaintance with the theory of complex variables is necessary. Number theory is an ancient subject and its content is vast. Any introductory book must, of necessity, make a very limited selection from the fascinating array of possible topics. Our focus is on topics which point in the direction of algebraic number theory and arithmetic algebraic geometry. By a careful selection of subject matter we have found it possible to exposit some rather advanced material without requiring very much in the way of technical background. Most of this material is classical in the sense that it was discovered during the nineteenth century and earlier, but it is also modern because it is intimately related to important research going on at the present time.

Multinational Firms, Innovation and Productivity D. Castellani, Davide Castellani, Antonello Zanfei, 2006 The book assumes an original place in the literature. . . Castellani and Zanfei show that the economic impact of MNEs on innovation and productivity depends on evolutionary features of firms and industries, particularly on the heterogeneity of firm strategies and behaviours. . . this volume contains high-quality, well-written research. . . Simona Iammarino, Research Policy . . . this book offers the reader a well-written and very comprehensive analysis on the link between innovation and internalization which leads to insights into firm heterogeneity. The authors have succeeded in synthesizing the vast body of theoretical and empirical research and given an up-to-date overview of the various issues involved. This is then complemented with their own research findings. . . The book will undoubtedly enrich the debate on the behavior and impact of MNEs. Yama Temouri, Journal of International Business Studies Davide Castellani and Antonello Zanfei, two well-known Italian economists, have brought forth an excellent new book. . . I think this book will serve as a starting-point for many interesting studies, both because of its findings and because of its empirical and theoretical rigour. . . the book lays an excellent and empirically well founded foundation that opens the way for what we need most in research on the international innovative activities and R&D configurations of MNCs: intrafirm data and the study of intrafirm processes, configurations and specific interactions with the host country environment. The book to me is an important step in moving innovation research forward in this direction. . . I am sure that this book will serve as a thought-provoking starting point for many future studies on firms' international innovative activities and therefore recommend it without any reservation. Marcus M. Keupp, Creativity and Innovation Management Castellani and Zanfei have developed an original and comprehensive analysis of the role of multinational firms in the transfer, creation and diffusion of technology. By developing their view of the multinationals as double network institutions, the authors provide new insights on a variety of key issues at the frontier of economics of international production and innovation. This book is thought-provoking, incisive and topical, and should be required reading for both economists and policymakers alike. Rajneesh Narula, University of Reading, UK Castellani and Zanfei present an in-depth theoretical and empirical analysis of the key issues underpinning the relationship between innovation and multinationality. This book is strongly-recommended reading for any researcher working on innovation or multinationality or the interface between the two. Grazia Ietto-Gillies, London South Bank University, UK This book gets to the root of how and why multinational firms differ in the cross-border creation, transfer and diffusion of technology, and provides fresh evidence on the effects that these differences have on productivity and innovation in the economic systems in which they are

active. Davide Castellani and Antonello Zanfei consider multinationals as heterogeneous institutions that combine internal networks of subsidiaries with external networks of collaborative linkages, to bridge different economic and innovation systems. They examine heterogeneity in productivity and innovative behaviour between multinational and national firms, as well as across and within multinationals. The authors argue that not every foreign firm is a good source of externality, and not every domestic firm is equally well placed to benefit from multinationals. It is shown that spillovers from multinationals differ according to the technological profiles, embeddedness and linkage creation of both foreign and domestic firms active in local markets. The book supports this view with empirical evidence based on illustrative case studies, and on econometric analysis using extensive firm-level datasets on multinationals.

Introduction to Hp Spaces Paul Koosis, 1998 The first edition of this well known book was noted for its clear and accessible exposition of the basic theory of Hardy spaces from the concrete point of view (in the unit circle and the half plane). The intention was to give the reader, assumed to know basic real and complex variable theory and a little functional analysis, a secure foothold in the basic theory, and to understand its applications in other areas. For this reason, emphasis is placed on methods and the ideas behind them rather than on the accumulation of as many results as possible. The second edition retains that intention, but the coverage has been extended. The author has included two appendices by V. P. Havin, on Peter Jones' interpolation formula, and Havin's own proof of the weak sequential completeness of $L^1/H^1(0)$; in addition, numerous amendments, additions and corrections have been made throughout.

Fourier Analysis on Finite Groups and Applications Audrey Terras, 1999-03-28 It examines the theory of finite groups in a manner that is both accessible to the beginner and suitable for graduate research.

Number Theory and Its History Oystein Ore, 2012-07-06 Unusually clear, accessible introduction covers counting, properties of numbers, prime numbers, Aliquot parts, Diophantine problems, congruences, much more. Bibliography.
