Web Data Management Serge Abiteboul, Ioana Manolescu, Philippe Rigaux, Marie-Christine Rousset, Pierre Senellart, 2011-11-28 The Internet and World Wide Web have revolutionized access to information. Users now store information across multiple platforms from personal computers to smartphones and websites. As a consequence, data management concepts, methods and techniques are increasingly focused on distribution concerns. Now that information largely resides in the network, so do the tools that process this information. This book explains the foundations of XML with a focus on data distribution. It covers the many facets of distributed data management on the Web, such as description logics, that are already emerging in today's data integration applications and herald tomorrow's semantic Web. It also introduces the machinery used to manipulate the unprecedented amount of data collected on the Web. Several 'Putting into Practice' chapters describe detailed practical applications of the technologies and techniques. The book will serve as an introduction to the new, global, information systems for Web professionals and master's level courses.

Approaches to Intelligent Agents Hideyuki Nakashima, Chengqi

Zhang, 2003-07-31 Intelligent agents will be the necessity of the coming century. Software agents will pilot us through the vast sea of information, by communicating with other agents. A group of cooperating agents may accomplish a task which cannot be done by any subset of them. This volume consists of selected papers from PRIMA'99, the second Pacific Rim International Workshop on Multi-Agents, held in Kyoto, Japan, on December 2-3, 1999. PRIMA constitutes a series of workshops on autonomous agents and multi-agent systems, integrating the activities in Asia and the Pacific rim countries, such as MACC (Multiagent Systems and Cooperative Computation) in Japan, and the Australian Workshop on Distributed Artificial Intelligence. The first workshop, PRIMA'98, was held in conjunction with PRICAI'98, in Singapore. The aim of this workshop is to encourage activities in this field, and to bring together researchers from Asia and Pacific rim working on agents and multiagent issues. Unlike usual conferences, this workshop mainly discusses and explores scientific and practical problems as raised by the participants. Participation is thus limited to professionals who have made a significant contribution to the topics of the workshop. Topics of interest include, but are not limited to: - multi-agent systems and their applications - agent architecture and its applications - languages for describing (multi-)agent systems - standard (multi-)agent problems - challenging research issues in (multi-)agent systems - communication and dialogues - multi-agent learning - other issues on (multi-)agent systems We received 43 submissions to this workshop from more than 10 countries.

School Library Management Gail K. Dickinson, Judi Repman, 2015-01-26 This book compiles selected articles from Library Media Connection to help school librarians and pre-service librarians learn about how to implement best practices for school library management. At a time when budget cuts threaten the role of the school librarian, dynamic learning experiences can resurrect the usefulness of the library and the role of its staff. The seventh edition of this popular book helps librarians develop engaging school library programs for greater student involvement. Comprised of important articles from Library Media Connection (LMC), *School Library Management: Seventh Edition* is a compilation of best practices in the field of school library management. An excellent textbook for professors teaching LIS courses, the book contains updates to standards and technologies, and features the latest initiatives guiding practices, including Standards for the 21st Century Learner and Empowering Learners: Guidelines for School Library Programs. Each of the book's five sections features helpful tips from LMC and lists relevant resources for school library management. Selected articles address standards, inquiry, ethics, and information literacy. The book also includes a focus on the role of the school librarian in designing authentic assessments.

Modelling and simulation of low-temperature district heating systems for the development of an exergy-based assessment method. Anna Marie Dagmar Kallert, 2019-03-01 Low temperature district heating (LTDH) offers possibilities for efficient heat supply based on renewable energies. For the analysis of LTDH, the exergetic assessment is a suitable method. Hence, an exergy-based assessment method was developed in which energy as well as economic and sustainability aspects are combined. As part of a technology comparison, the method is applied to case studies to verify the applicability of the assessment approach. The approach highlights innovative supply solutions by identifying the advantages and disadvantages of different supply strategies.

RESTful Web Services Leonard Richardson, Sam Ruby, 2008-12-17 Every developer working with the Web needs to read this book. -- David Heinemeier Hansson, creator of the Rails framework *RESTful Web Services* finally provides a practical roadmap for constructing services that embrace the Web, instead of trying to route around it. -- Adam Trachtenberg, PHP author and EBay Web Services Evangelist You've built web sites that can be used by humans. But can you also build web sites that are usable by machines? That's where the future lies, and that's what *RESTful Web Services* shows you how to do. The World Wide Web is the most popular distributed application in history, and Web services and mashups have turned it into a powerful distributed computing platform. But today's web service technologies have lost sight of the simplicity that made the Web successful. They don't work like the Web, and they're missing out on its advantages. This book puts the Web back into web services. It shows how you can connect to the programmable web with the technologies you already use every day. The key is REST, the architectural style that drives the Web. This book: Emphasizes the power of basic Web technologies -- the HTTP application protocol, the URI naming standard, and the XML markup language Introduces the Resource-Oriented Architecture (ROA), a common-sense set of rules for designing RESTful web services Shows how a RESTful design is simpler, more versatile, and more scalable than a design based on Remote Procedure Calls (RPC) Includes real-world examples of RESTful web services, like Amazon's Simple Storage Service and the Atom Publishing Protocol Discusses web service clients for popular programming languages Shows how to implement RESTful services in three popular frameworks -- Ruby on Rails, Restlet (for Java), and Django (for Python) Focuses on practical issues: how to design and implement RESTful web services and clients This is the first book that applies the REST design philosophy to real web services. It sets down the best practices you need to make your design a success, and the techniques you need to turn your design into working code. You can harness the power of the Web for programmable applications: you just have to work with the Web instead of against it. This book shows you how.
