African Water Resource Database: Technical manual and workbook. Technical manual Jeff Jenness,2007 The African Water Resource Database (AWRD) is a set of data and custom-designed tools, combined in a geographic information system (GIS) analytical framework, aimed at facilitating responsible inland aquatic resource management with a focus on inland fisheries and aquaculture. It thus provides a valuable instrument to promote food security. The AWRD data archive includes an extensive collection of datasets covering the African continent, including: surface waterbodies, watersheds, aquatic species, rivers, political boundaries, population density, soils, satellite imagery and many other physiographic and climatological data. This technical paper is the second of two publications about the AWRD, and it includes a technical manual for spatial analysts and a workbook for university students and teachers. The first part of this technical paper is available separately (ISBN 9789251057407).

Field Methods in Remote Sensing Roger M. McCoy,2004-11-04 This concise, much-needed guide takes readers step by step through planning and executing field work associated with many different types of remote sensing projects. Remote sensing texts and research reports typically focus on data-analytic techniques while offering a dearth of information on procedures followed in the field. In contrast, this book provides clear recommendations for defining field work objectives, devising a valid sampling plan, finding locations using GPS, and selecting and using effective measurement techniques for field reflectance spectra and for studies of vegetation, soils, water, and urban areas. Appendices feature sample field note forms, an extensive bibliography on advanced and specialized methods, and online metadata sources.

Geoinformation Metadata in INSPIRE and SDI Leszek Litwin,Maciej Rossa,2011-06-27 The book is a new comprehensive textbook about creating and publishing geoinformation metadata. It is a compendium of knowledge about geoinformation metadata in INSPIRE Directive and Spatial Information Infrastructures. It contains the knowledge necessary to understand prior to the creation of geoinformation metadata. Metadata – "data about data" - describe the layers of spatial data (data series, services) responding to the questions: what?, why?, when?, who?, how? and where? Geoinformation metadata allows for exact search of the spatial data according to given criteria, regardless of where this data is located. On 15 May 2007 the EU Directive 2007/2/EC came into force establishing Infrastructure for Spatial Information in Europe - INSPIRE. The proper functioning of the infrastructure for spatial information would not be possible without the metadata.

Developer's Digital Media Reference Curtis Poole,Janette Bradley,2013-04-26 Designed for media professionals working across a broad range of formats, Developer's Digital Media Reference is an excellent reference guide for those keeping pace with this dynamic industry. As convergence between the World Wide Web, multimedia, and television production communities continues, there is an increased demand for professionals to familiarize themselves with the many new delivery contexts, including hybrid DVD (where digital video content and computer data live on the same disc), interactive TV, and streaming media. Developer's Digital Media Reference covers essential technologies such as SVG (scalable vector graphics), SMIL (Synchronized Multimedia Integration Language, a markup language for creating animations on the web), MPEG-4 (compression standard for streaming audio/video), and Dynamic Web Applications. In addition to serving as a quick-look-up guide, this text is organized to explain today's major media: server-based architectures, disc-based architectures, distribution architectures, and merging/shared architectures. Each topic is discussed in terms of the technological background-evolution, current tools, and production tips and techniques.

Geographic Information Metadata for Spatial Data Infrastructures Javier Nogueras-Iso,Pedro R. Muro-Medrano,Francisco Javier Zarazaga-Soria,2005-03-30 Metadata play a fundamental role in both DLs and SDIs. Commonly defined as structured data about data or data which describe attributes of a resource or, more simply, information about data, it is an essential requirement for locating and evaluating available data. Therefore, this book focuses on the study of different metadata aspects, which contribute to a more efficient use of DLs and SDIs. The three main issues addressed are: the management of nested collections of resources, the interoperability between metadata schemas, and the integration of information retrieval techniques to the discovery services of geographic data catalogs (contributing in this way to avoid metadata content heterogeneity).

Metadata and Semantic Research Salvador Sanchez-Alonso,Ioannis N. Athanasiadis,2010-10-08 Metadata and semantic research is a growing complex ecosystem of conceptual, theoretical, methodological, and technological frameworks, offering innovative computational solutions in the design and development of computer-based systems. Within this perspective, researchers working in the area need to further develop and integrate a broad range of methods, results, and solutions coming from different areas. MTSR has been designed as a forum allowing researchers to present and discuss specialized results as general contributions to the field. This volume collects the papers selected for presentation at the 4th International Conference on Metadata and Semantic Research (MTSR 2010), held in Alcala de Henares—a world heritage city and birthplace of Miguel de Cervantes—at the University of Alcala (October 20–22, 2010). The first MTSR conference was held online in 2005, followed by two more editions: in Corfu (2007) and in Milan (2009). The experience acquired during the past five years, and the warm welcome of MTSR by the research community, encouraged us to organize this new edition of the series, and turn it into a yearly event. According to the number and quality of the contributions submitted for revision, our 2010 effort was again a considerable success.

Introduction to Modern Information Retrieval Gobinda G. Chowdhury,2010 An information retrieval (IR) system is designed to analyse, process and store sources of information and retrieve those that match a particular user's requirements. A bewildering range of techniques is now available to the information professional attempting to successfully retrieve information. It is recognized that today's information professionals need to concentrate their efforts on learning the techniques of computerized IR. However, it is this book's contention that it also benefits them to learn the theory, techniques and tools that constitute the traditional approaches to the organization and processing of information. In fact much of this knowledge may still be applicable in the storage and retrieval of electronic information in digital library environments. The fully revised third edition of this highly regarded textbook has been thoroughly updated to incorporate major changes in this rapidly expanding field since the second edition in 2004, and a complete new chapter on citation indexing has been added. Unique in its scope, the book covers the whole spectrum of information storage and retrieval, including: users of IR and IR options; database technology; bibliographic formats; cataloguing and metadata; subject analysis and representation; automatic indexing and file organization; vocabulary control; abstracts and indexing; searching and retrieval; user-centred models of IR and user interfaces; evaluation of IR systems and evaluation experiments; online and CD-ROM IR; multimedia IR; hypertext and mark-up languages; web IR; intelligent IR; natural language processing and its applications in IR; citation analysis and IR; IR in digital libraries; and trends in IR research. Illustrated with many examples and comprehensively referenced for an international audience, this is an indispensable textbook for students of library and information studies. It is also an invaluable aid for information practitioners wishing to brush up on their skills and keep up to date with the latest techniques.

Cyber Worship in Multifaith Perspectives Mohamed Taher,2006 Cyber Worship in Multifaith Perspectives, as is implied by its name, explores worship (i.e., Prayer, Praise, Scripture, Sacrament, Rituals, Confessions, Eucharist, Rites, Pilgrimages, Reflection, Contemplation, etc.) on the Internet. It is not an 'everything you need to know' guide about the subjects of faith and belief, religions-online, religions on the Net, or religions in cyberspace. Rather, it is a book about religious and spiritual experience under the rubric, cyber worship, which is the variety of ways religious devotion is performed and carried out on the Internet. The term 'Cyber Worship' is a catchall phrase, which includes variants such as online worship, virtual worship, electronic prayer, cyber puja, cyber synagogue, and so on. Dr. Mohamed Taher has thus assembled a quick reference for two groups: those communities that are involved in Cyber Worship and business Webs that collaborate in sustaining wired environments. As such, this book provides an interesting and current perspective on a practice that will continue to grow in the future.
