Performance Optimization: Techniques And Strategies Smashing Magazine, 2014-09-24 Slow loading times break the user experience of any website – no matter how well crafted it might be. In fact, it only takes three seconds until users lose their interest in a site if they don't get a response immediately. If another site happens to be 250ms faster than yours, then users are more inclined to switch to a competitor's website in no time. Web fonts, heavy JavaScript, third-party widgets – all of them can sum up to become a real performance bottleneck. Nevertheless, tracking that down does not only improve loading times but also results in a much snappier experience and a higher user engagement. In this eBook, we've compiled an entire selection of front-end and server-side techniques that will help you tackle such bottlenecks. Find out how to speed up existing websites, build high-performance sites (for both mobile and desktop), and prepare them for heavy-load situations. Furthermore, you'll learn more about how performance improvements and a 97-99 Google PageSpeed score were achieved on Smashing Magazine, as well as how optimization strategies can enhance real-life projects by taking a closer look at Pinterest's paint performance case study. With the help of this eBook, you'll notice that it's high time to dig deeper into your own site and examine it closely. Why don't you polish it up and make it even better than it already is!

**God-given Foods Eating Plan: for Lifelong Health, Optimization of Hormones, Improved Athletic Performance** Gary F. Zeolla, 2007-03-01

This book studies different food groups, with a chapter devoted to each major classification of foods. First the Biblical evidence is considered, then modern-day scientific research. Foods are classified as God-given foods and non-God-given foods. A healthy eating plan is composed of a variety of God-given foods and avoids non-God-given foods. Unlike other books on this subject, this book does not promote a vegetarian diet since God gave us meat for food, and meat-eating is assumed throughout Scripture, with no negative connotations. Moreover, meat, poultry, and fish can and should be included in a healthy eating plan. The proposed eating plan is also designed to optimize hormones, such as testosterone, growth hormone, and insulin. This can produce dramatic differences in a person's health and well-being and can lead to a gain in muscle mass and a loss of body fat. It can also lead to improved athletic performance. This book also looks at other aspects of athletic nutrition.
