Hydroponics Richard Jones, 2020-04-24 Do you want to learn the secrets behind hydroponics? If you want to learn how to turn build your own hydroponic system, then keep reading... All plants require nutrients from soil, light and dissolved to expand. Hydroponics allows for the delivery of a very specifically regulated quantity of nutrients, dissolved in water, directly to the root system as needed by the plant. Because the root system is no longer required to stretch so far to obtain the nutrients, this in turn allows the grower to plant his crops at much higher densities, and that's just another reason why hydroponic crop yields are that much higher than typical soil yields. Hydroponics is suitable for the homeowner or apartment resident hobbyist who has no time or space for full-time gardening of the soil. In late spring and summer, you can position your portable hydroponic device outside on a porch or balcony where natural sunlight helps to produce enormous yields from lettuce, to cucumbers, to zinnias. Developing with hydroponics accompanies numerous preferences, the greatest of which is an enormously expanded pace of development in your plants. With

the best possible arrangement, your plants will develop up to 25% quicker and produce up to 30% more than similar plants developed in soil. \*\*\*Please note: the paperback is in color!\*\*\* This bundle contains two books: #1 Hydroponics for Beginners: DIY Beginner's guide for growing vegetable, herbs and fruits. learn the best cultivation systems. LAST DAYS! ★ Did you know growing your own food is both environmentally friendly and healthier than most other forms of food? Hydroponic gardening uses water and nutrients to grow crops instead of soil, so it's far more efficient than traditional gardening. Because they're mass produced in a controlled environment, each crop requires fewer resources for growing. As a result, hydroponic farming is less damaging to the environment overall. Most hydroponic crops are grown in soil-free trays called compots, which are replenished by watering the roots of the plants. This means no soil needs to be removed from the ground for growing plants. It also reduces the amount of waste created during the process. Hydroponic gardens can even be used for many microgreens. This means you can grow greens in your home, organically, without ever having to dig up the ground! All you have to do is water and care for your crop as you would any other salad greens. *Hydroponic Garden Secrets* Tyler Water, 2020-12-04 \*\* B/W EDITION \*\* Do you want to discover a scientific technique for building your own hydroponic garden? Then keep reading... Hydroponics is a means of growing plants without soil. It makes use of nutrient-rich water or a nutrient solution as well as techniques that allow the plant to grow. You can also use sand or gravel, with added nutrients. In this chapter, you are going to learn the history of the

growing art that we call hydroponics. You will also learn about some of its practical uses throughout history. Traditionally, the soil is used to grow plants. It was thought that soil was necessary since plants started out in the earth, with nutrient-rich soils like the strawberry plants that were first grown in the wild before being cultivated for gardens. At some point in history, it was discovered that the soil was not necessary for the growing process. Rather, the role of soil is to act as a reservoir to hold the nutrients that a plant needs in order to grow. Crops grown hydroponically, according to studies, grow faster and healthier and are better than crops grown on soil; this is because they would not have to go through a lot of disadvantages that the soil may present, such as; situations of a break out of a soil-borne disease in the area, the struggle to have to push its way through the soil during germination, the attack from organism and pests that live in the soil. And of course, the plants in hydroponic systems do not have to 'hustle' for nutrients and water because this is basically what they are planted in, in hydroponic systems-water-based mineral nutrient solutions. Hydroponics also helps you save water, which sounds a bit strange when you think of water is essential for this process. Usually, it's every alternate day so that the soil soaks up the water and is transported to the roots. That sounds fine, doesn't it? But that's only a portion of the big picture. Some of the water is bound to seep out of the container, some of it evaporates, and a portion of it seeps further into the soil beyond the plant's roots. So, in practice, the plant essentially only uses up a small portion of the water. Hydroponics uses a simple recirculating mechanism that ensures that the water is fully soaked up by the roots. It means that the portion of water that isn't absorbed by the plant is directly sent to the reservoir. The same water from the reservoir is later pumped up to the plants. Since the

reservoir is shut tight, there is no chance for the water to evaporate, and it certainly will not seep out of the bottom of the container. You can save around 80% of the water by switching to hydroponics instead of using regular soil gardening. This book covers the following topics: Equipment Hydroponic Growing System Plant necessities Best plant for hydroponics Pest and disease Choosing the right site for your garden Maintenance of your hydroponic garden And Much More! Do not get scared; hydroponic gardening is not as complicated, tricky, and demanding as your mind is about to convince you that it is; on the contrary, it is very simple! You might have heard of soil-less society, which is another term often used to explain the same thing when you haven't heard about the hydroponics. The same natural elements are used to grow plants in soils, so that weeds, soil-borne pests, and diseases do not harm the plants. Hydroponics allows us to grow plants with excellent results indoors. Most plants grow well with water indoors, as the feed does not produce large flowers or thickened foil, just adding a quality feeding schedule does not spurn the plant at all with only daylight as a light signal from outside. Nevertheless, because you cannot change our weather or lighting time, you cannot control the cycles of these plants in the first place through artificial light, which provides a constant lighting signal on a timely basis, regardless of the time of

year. It was quickly noticed that the lights were on for 16 to 18 hours a day, and if changed to 10-12 hours a day, a blooming period was shifted to that of these plants under 'hydroponic lighting.' When it was discovered by pure accident with cold elements outside, the stronger the light source, the greater the growth rate of these plants when the flowering occurred, of course, light alone is not likely to produce high growth or flora unless the air is full of CO<sub>2</sub> and the nutrients and minerals are of quality. Hydroponics is now starting to play a more significant role in agricultural production around the world. Hydroponic gardening has been widely used since the 1970s, but it has become more accessible for the household grower only recently. Demand for environmentally friendly and safer goods in society has been an essential factor in this development. This book covers the following topics: What is Hydroponics? Hydroponic and the Science How Hydroponic Gardening Works Why is Hydroponics Preferred for Indoor Gardening? Advantages and Disadvantages of a Hydroponics System Types of Hydroponics Growing Systems Necessary Equipment to Build Your Own Hydroponic System Choosing the Best Lighting Medium for Your Hydroponic Plants Room Conditions and Water Quality Starting Your Seeds The Best Plants to Grow Using Hydroponics How to Maintain Your Hydroponic System Tips and Tricks to Growing Healthy Herbs, Vegetables and Fruits Nutrition for Hydroponics Mistakes to Avoid How to Build Your Own System Pests Control Common Problems and How to Avoid Them Business Tips And Information About Hydroponics Top Ten Reasons to Grow a Hydroponic Garden Enjoying the Yields Other Important Aspects of a Hydroponics System ...And so much more! Since the Hydroponic industry, to be very truthful, is still small and there are few local stores to buy

supplies, the alternative is on-line garden stores that concentrate on providing hydroponic garden supplies and even ready to use, prefabricated hydroponic gardens for people who cannot wait to get started. And in cooperation with some of the best companies in the industry, however, we are endeavoring to select components, nutrients, and accessories you may need to build, sustain, and maintain the gardens featured in this publication. Ultimately, reading through this book is going to guide you through everything you will need to know. Whether you have a lot of space or none at all, you can make hydroponics work for your own household, and that is precisely what you will be learning to do. Ready to get started? Click Buy Now!
