Marketing Tourist Destinations in Emerging Economies Ishmael

Mensah,Kandappan Balasubramanian,Mohd Raziff Jamaluddin,Gina Alcoriza,Vanessa Gaffar,S. Mostafa Rasoolimanesh,2021-11-27 While tourism is a key economic generator for many countries, emerging economies are confronted with additional challenges that those well-established destinations in North America, Australia and Europe normally don't have to contend with. The potential for terrorism, political unrest, natural disasters, accidents – not to mention epidemics – have the potential to derail tourism in emerging economies. To mitigate these risks, emerging destinations need well-coordinated management and marketing strategies. However, most texts on tourism destination marketing reflect destinations in more advanced countries. This book acknowledges the fact that emerging tourist destinations have unique characteristics and challenges, which have implications for destination marketing. Highlighting the marketing challenges, best practices and strategies relevant to emerging economies, this book covers core topics such as image creation and branding, destination marketing during crises and pandemics, market segmentation and the travel decision making process among others. Providing up to date knowledge on an otherwise under-explored topic, this collection is ideal reading for upper-level students, researchers and policymakers.

Governing by Network Stephen Goldsmith, William D. Eggers, 2005-06-22 A fundamental, but mostly hidden, transformation is happening in the way public services are being delivered, and in the way local and national governments fulfill their policy goals. Government executives are redefining their core responsibilities away from managing workers and providing services directly to orchestrating networks of public, private, and nonprofit organizations to deliver the services that government once did itself. Authors Stephen Goldsmith and William D. Eggers call this new model "governing by network" and maintain that the new approach is a dramatically different type of endeavor that simply managing divisions of employees. Like any changes of such magnitude, it poses major challenges for those in charge. Faced by a web of relationships and partnerships that increasingly make up modern governance, public managers must grapple with skill-set issues (managing a contract to capture value); technology issues (incompatible information systems); communications issues (one partner in the network, for example, might possess more information than another); and cultural issues (how

interplay among varied public, private, and nonprofit sector cultures can create unproductive dissonance). Governing by Network examines for the first time how managers on both sides of the aisle, public and private, are coping with the changes. Drawing from dozens of case studies, as well as established best practices, the authors tell us what works and what doesn't. Here is a clear roadmap for actually governing the networked state for elected officials, business executives, and the broader public.

Mental Health and Pain Serge Marchand,Djéa Saravane,Isabelle Gaumond,2014-06-03 This book proposes a didactic approach to the different

aspects of pain in mental health. The various chapters cover the myths, neurophysiology, perception, measurement and management of pain in mental health. The most common problems, including mood disorders, schizophrenia, anxiety, somatoform disorders and pervasive developmental disorders, are covered. Each chapter addresses the problem of pain by putting an emphasis on the characteristics of different populations of patients suffering from mental illness. The book helps specialists working in different areas of mental health to appreciate the importance of pain problems in mental health and also offers avenues for the measurement and treatment of pain in these patients. Mental health and pain are complex issues. They also share certain mutually influential neurophysiological mechanisms, which makes it even more difficult to identify their specific individual characteristics. This duality between the somatic and psychic components can become a pitfall for the specialist in mental health since it can be difficult to disentangle the evolution of a painful condition from the mental illness.

Tourist Destination Governance Eric Laws, Harold Richins, Jerome Francis Agrusa, 2011 This book examines the political order and the issues, processes and approaches in applying governance insights to tourist destinations. The book consists of 16 chapters presented in three parts. Part I introduces the reader to the issues and considerations of tourist destination governance. The four chapters in this part address the diversity of questions of relevance around regional destination development, community involvement,

responsiveness and future outcomes of governance in the context of tourism. This includes an exploration of a variety of challenges regarding governance in emerging tourist destinations within the Greater Mekong in Asia, the conflicts in governance within a regional community in Scotland which has had a long history of golf tourism, the development of a typology of issues and pressures that affect tourist destination governance and the role of knowledge in good governance for tourist destinations. Part II explores the complexities and considerations of decision making and the significant role it plays in its specific relevance to tourist destination governance and tourism development within regional communities. In acknowledging that tourist destination development may involve contentious, complicated and arduous processes, this part recognizes that decision making has a prominent role to play in achieving effectiveness in governance. The three chapters in this part examine tourist destination decision making during times of crisis in Thailand, stakeholder roles in governance and decision making for a wildlife tour in Tonga, and the utilization of community involvement and empowerment as keys to success in regional tourist destinations. Part III provides further understanding regarding the approaches and solutions of tourist destination governance. This includes aspects of structural change, community engagement, networks and collaborations in the context of destinations. The five chapters in this part include the exploration of a process of governance change within a broader mountain tourist destination in

Switzerland, utilizing effective networks as assistance to governance in destinations, community-based tourism governance solutions in a case study in Thailand and insights from complexity, network and stakeholder theories as approaches, including an understanding of a micro-macro context of tourist destination governance at its local/regional and national level. The concluding chapter examines the theory and methodology of governance studies, provide insights for tourist destination managers and researchers, and identify opportunities for further research into destination governance issues. This chapter discusses the application of governance concepts to other countries' governance and issues of conceptual importance, such as the need for ideology in the discussion of governance. This raises the question: does good governance of a tourist destination have to be based on democratic principles? Finally, the chapter looks at the concept of governance effectiveness.

Government 2.0 William D. Eggers, 2007-05 Unhyped and therefore unnoticed, technology is altering the behavior and mission of city halls, statehouses, schools, and federal agencies across America. From transportation to education to elections to law enforcement (or, as we're now referring to it, 'homeland security'), the digital revolution is transforming government and politics, slashing bureaucracies; improving services; producing innovative solutions to some of our nation's thorniest problems; changing the terms of the Left/Right political debate; and offering ordinary people access to a

degree of information and individual influence until recently accessible only to the most powerful citizens, finally redeeming the Founding Fathers' original vision for our democracy, and enriching American life and society in the process. Based on interviews with over 500 leading politicians, researchers, technology industry CEOs and leaders, futurists and front-line public employees, Government 2.0 journeys across America and overseas to demonstrate the promise and perils of this emerging world and offer a likely road map to its implementation. You'll hear from technology executives preparing for an onrushing future when, for many citizens, most government interactions could take place on private-sector websites; from bureaucrats like OSHA's Ed Stern fighting to get their agencies to adopt expert systems technology; from William Bennett, whose virtual education company offers a glimpse into one possible future of American education; and from Governor Jeb Bush and former Mayor Rudolph Giuliani as they endeavor to overcome bureaucratic inertia to provide more open, efficient, and effective governments. Rich with anecdotes and case studies, Government 2.0 is a must read for every entrepreneur frustrated by paperwork, every parent who's sick of being surprised by bad report cards, every commuter stuck in traffic, every activist trying to fight City Hall, and every taxpayer who cares about the future of government.

transfer model Implement data augmentation and retrain your model Build a system for text processing using a recurrent neural network Who this book is for Applied Deep Learning with PyTorch is designed for data scientists, data analysts, and developers who want to work with data using deep learning techniques. Anyone looking to explore and implement advanced algorithms with PyTorch will also find this book useful. Some working knowledge of Python and familiarity with the basics of machine learning are a must. However, knowledge of NumPy and pandas will be beneficial, but not essential.

Generalized Nets Krassimir T. Atanassov, 1991 The Generalized Nets (GNs) are extensions of Petri nets and of different Petri nets modifications, introduced by the author (1982). In the book, definitions and the basic properties of GNs are given. The GNs extensions and reductions are discussed. GNs, which describe the functioning and results of the work of different types of petri nets, different types of finite automata and of Turing machines, are given. Over the GNs are defined different operations, relations and operators. They can also be transferred onto other nets. Many open problems in the GNs theory are given.

Index Matrices: Towards an Augmented Matrix Calculus Krassimir T. Atanassov, 2014-09-03 This book presents the very concept of an index matrix and its related augmented matrix calculus in a comprehensive form. It mostly illustrates the exposition with examples related to the generalized nets and intuitionistic fuzzy sets which are examples of an extremely wide array of

possible application areas. The present book contains the basic results of the author over index matrices and some of its open problems with the aim to stimulating more researchers to start working in this area.
