Relationships Between Psychological Attribute Information and Prediction of Ice Hockey Player Performance John Paul Hamre, 2007

Forecasting Success in the National Hockey League Using In-Game Statistics and Textual Data Joshua Weissbock, 2014 In this thesis, we look at a number of methods to forecast success (winners and losers), both of single games and playoff series (best-of-seven games) in the sport of ice hockey, more specifically within the National Hockey League (NHL). Our findings indicate that there exists a theoretical upper bound, which seems to hold true for all sports, that makes prediction difficult. In the first part of this thesis, we look at predicting success of individual games to learn which of the two teams will win or lose. We use a number of traditional statistics (published on the league's website and used by the media) and performance metrics (used by Internet hockey analysts; they are shown to have a much higher correlation with success over the long term). Despite the demonstrated long term success of performance metrics, it was the traditional statistics that had the most value to automatic game prediction, allowing our model to achieve 59.8% accuracy. We found it interesting that regardless of which features we used in our model, we were not able to increase the accuracy much higher than 60%. We compared the observed win% of teams in the NHL to many simulated leagues and found that there appears to be a theoretical upper bound of approximately 62% for single game prediction in the NHL. As one game is difficult to predict, with a maximum of accuracy of 62%, then predicting a longer series of games must be easier. We looked at predicting the winner of the best-of-seven series between two teams using over 30 features, both traditional and advanced statistics, and found that we were able to increase our prediction accuracy to almost 75%. We then re-explored predicting single games with the use of pre-game textual reports written by hockey experts from <http://www.NHL.com> using Bag-of-Word features and sentiment analysis. We combined these features with the numerical data in a multi-layer meta-classifiers and were able to increase the accuracy close to the upper bound.

Prediction Machines, Updated and Expanded Ajay Agrawal, Joshua Gans, Avi Goldfarb, 2022-11-15 Named one of The five best books to understand AI by The Economist The impact AI will have is profound, but the economic framework for understanding it is surprisingly simple. Artificial intelligence seems to do the impossible, magically bringing machines to life—driving cars, trading stocks, and teaching children. But facing the sea change that AI brings can be paralyzing. How should companies set strategies, governments design policies, and people plan their lives for a world so different from what we know? In the face of such uncertainty, many either cower in fear or predict an impossibly sunny future. But in *Prediction Machines*, three eminent economists recast the rise of AI as a drop in the cost of prediction. With this masterful stroke, they lift the curtain on the AI-is-magic hype and provide economic clarity about the AI revolution as well as a basis for action by executives, policy makers, investors, and entrepreneurs. In this new, updated edition, the authors illustrate how, when AI is framed as cheap prediction, its extraordinary potential becomes clear: Prediction is at the

heart of making decisions amid uncertainty. Our businesses and personal lives are riddled with such decisions. Prediction tools increase productivity—operating machines, handling documents, communicating with customers. Uncertainty constrains strategy. Better prediction creates opportunities for new business strategies to compete. The authors reset the context, describing the striking impact the book has had and how its argument and its implications are playing out in the real world. And in new material, they explain how prediction fits into decision-making processes and how foundational technologies such as quantum computing will impact business choices. Penetrating, insightful, and practical, *Prediction Machines* will help you navigate the changes on the horizon.

Neural Information Processing Long Cheng, Andrew Chi Sing Leung, Seiichi Ozawa, 2018-12-03 The seven-volume set of LNCS 11301-11307 constitutes the proceedings of the 25th International Conference on Neural Information Processing, ICONIP 2018, held in Siem Reap, Cambodia, in December 2018. The 401 full papers presented were carefully reviewed and selected from 575 submissions. The papers address the emerging topics of theoretical research, empirical studies, and applications of neural information processing techniques across different domains. The 5th volume, LNCS 11305, is organized in topical sections on prediction; pattern recognition; and word, text and document processing.

Advances in Automation III Andrey A. Radionov, Vadim R. Gasiyarov, 2022-01-18 This book reports on innovative research and developments in automation. Spanning a wide range of disciplines, including communication engineering, power engineering, control engineering, instrumentation, signal processing and cybersecurity, it focuses on methods and findings aimed at improving the control and monitoring of industrial and manufacturing processes as well as safety. Based on the International Russian Automation Conference, held on September 5–11, 2021, in Sochi, Russia, the book provides academics and professionals with a timely overview of and extensive information on the state of the art in the field of automation and control systems, and fosters new ideas and collaborations between groups in different countries.

Squaw Valley Gold Seamus O'Coughlin, 2001-10 The 1960 Olympic Winter Games in Squaw Valley, California, literally introduced winter sports, particularly ice hockey, to the American public through television. During the average minute the Olympics were on the air, 26.1% of homes with sets (black and white only) were tuned in. Twenty million Americans watched the nationally televised game between the U.S. and Russia on Saturday afternoon, February 27, more than the combined audience of all other programs on the air at the same time. *Squaw Valley Gold* tracks the struggle over control of amateur hockey in the United States from the world tournament at the 1920 Olympic Summer Games in Antwerp Belgium to America's first gold medal in Olympic ice hockey. The Squaw Valley Games were also known as the Hollywood Olympics. Walt Disney programmed the pageantry and invited his movie friends to the party. Europeans fretted and fumed over the Disneyland atmosphere, but the athletes, housed together in a private Olympic Village, and the spectators had a great time hanging out with Bing Crosby, Marlene Dietrich, Jayne Mansfield, Roy Rogers, Red Skelton and Danny Kaye.

Advances in Networked-based Information Systems Leonard Barolli, 2023-08-23 The networks and information systems of today are evolving rapidly. There are new trends and applications in information networking such as wireless sensor

networks, ad hoc networks, peer-to-peer systems, vehicular networks, opportunistic networks, grid and cloud computing, pervasive and ubiquitous computing, multimedia systems, security, multi-agent systems, high-speed networks, and web-based systems. These kinds of networks need to manage the increasing number of users, provide support for different services, guarantee the QoS, and optimize the network resources. For these networks, there are many research issues and challenges that should be considered and find solutions. The aim of the book is to provide latest research findings, innovative research results, methods, and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and their applications.

Summary of Ajay Agrawal, Joshua Gans & Avi Goldfarb's Prediction Machines Everest Media, 2022-06-10T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 AI is everywhere. It is in our phones, cars, shopping experiences, romantic matchmaking, hospitals, banks, and all over the media. No wonder corporate directors, CEOs, vice presidents, managers, team leaders, and entrepreneurs are anxiously racing to learn about AI: it is about to fundamentally change their businesses. #2 The new wave of artificial intelligence does not bring us intelligence, but rather a critical component of intelligence: prediction. Each startup in our lab is based on the benefits of better prediction. We provide you with an understanding of AI's impact on management and decisions, as well as on the economy. #3 Prediction Machines is not a recipe for success in the AI economy. Instead, it emphasizes trade-offs. More data means less privacy. More speed means less accuracy. More autonomy means less control. #4 The current wave of advances in artificial intelligence doesn't actually bring us intelligence, but instead a critical component of intelligence: prediction. Prediction is a central input into decision-making.

Evidence-Based Applied Sport Psychology Roland A. Carlstedt, PhD, 2012-11-13 This is the first book to call for a major paradigm shift in applied sport psychology by providing a wealth of systematic, scientifically validated research in a field where assessment and treatment has often been haphazard. In his quest to bring sport psychology to a higher level of validity, Dr. Carlstedt describes the most current assessment methods, intervention procedures, and promising research that are critical for use in evidence-based practice. These assessment and treatment methods are based on 25 years of rigorous scientific approaches and principles that incorporate the most sophisticated research methods now available. The book describes the mechanisms that influence peak performance or psychological performance deficits and the mental training process, and provides procedures that will take the guesswork out of typical assessment and mental training. It offers tools with which practitioners can reexamine their modus operandi and critically explore the mechanism of interaction outcomes. To this end, the book includes extensive data sets on personality, behavioral tendencies, mind-body responses, and performance outcome. Dr. Carlstedt advocates moving beyond compartmentalized therapeutic sessions in the office to directly observe athletic performance during training and actual competition. The text

also contains individual and team case studies to enhance its focus on individualized, efficacy-tested protocols for each individual athlete. Key Features: Presents a detailed client-centered assessment and intervention model grounded in technology-supported, step-by-step procedures, followed by efficacy testing Focuses on the importance of empirical scrutiny and individualized, efficacy-tested protocols for each individual athlete Describes the Carlstedt Protocol containing a visualization efficiency test among many other technologically based assessment and training tools Provides a roadmap for achieving a gold-standard system of accountability Practitioners will learn how to work within Carlstedt's integrative model to improve athlete performance and contribute to the advancement of evidence-based applied sport psychology.

European Ice Hockey Championship Results Tomasz Małolepszy, 2013 In European Ice Hockey Championship Results: Since 1910, Tomasz Malolepszy charts this popular sport in Europe with a complete statistical history of both the men's and women's competition. The Intelligent Web Gautam Shroff, 2013-11-28 As we use the Web for social networking, shopping, and news, we leave a personal trail. These days, linger over a Web page selling lamps, and they will turn up at the advertising margins as you move around the Internet, reminding you, tempting you to make that purchase. Search engines such as Google can now look deep into the data on the Web to pull out instances of the words you are looking for. And there are pages that collect and assess information to give you a snapshot of changing political opinion. These are just basic examples of the growth of Web intelligence, as increasingly sophisticated algorithms operate on the vast and growing amount of data on the Web, sifting, selecting, comparing, aggregating, correcting; following simple but powerful rules to decide what matters. While original optimism for Artificial Intelligence declined, this new kind of machine intelligence is emerging as the Web grows ever larger and more interconnected. Gautam Shroff takes us on a journey through the computer science of search, natural language, text mining, machine learning, swarm

computing, and semantic reasoning, from Watson to self-driving cars. This machine intelligence may even mimic at a basic level what happens in the brain.
