This series, which began in 1960, is the oldest continuously published series of books that has chronicled the ever changing landscape of information technology. Each year three volumes are published, each presenting five to seven chapters describing the latest technology in the use of computers today. In this current volume, we present six chapters that give an update on some of the major issues affecting the development of software today. The six chapters in this volume can be divided into two general categories. The first three deal with the increasing importance of security in the software we write and provide insights into how to increase that security. The three latter chapters look at software development as a whole and provide guidelines in how best to make certain decisions on a project-level basis.

Conceived as a sequel to

the 1976 exhibition Age of Spirituality, which focused on the first centuries of Byzantium. Preceding the catalogue, 17 essays treat the historical context, religious sphere, and secular courtly realm of the empire, and the interactions between Byzantium and other medieval cultures. Multimedia Modeling - Modeling Multimedia Information & Systems (Mmm 2000) Shuji Hashimoto,2000-10-27 Since the beginning of human history we have had a communication network that is identical with the physical distribution network. In the late 19th century we established the energy network to distribute electric and thermal energy, launching the modern society. The analog communication network became popular in the middle of the 20th century. And now, at the end of the 20th century, we have global digital information networks. Along with the advancement of the communication network, the progress of the information processing technology can be classified into three historical phases. The first phase technology is physical information processing, treating physical data from the real world. This technology is often called “signal processing” and is based on the physical law of nature. The second phase is free from the physical constraints. It is logical information processing, dealing with knowledge and rules. The most important aspect of this phase is consistency. “Provable” is employed to confirm the reality of the system. Based on the advanced computer and network technology, we are entering the third phase of information processing, which is “Kansei” information processing. (“Kansei” is a Japanese word expressing some subjective ability referred to as “sensibility”, “intuition”, “affection” or “emotion”). Emotional resonance or consent is important in the pursuit of reality in this phase. Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing. It will provide a next generation framework to construct a human-centered information environment that is more comfortable and more productive. This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications. It contains 30 technical articles,

all of which were selected, after vigorous peer reviews, for presentation at the International Conference on Multimedia Modeling held in Nagano, Japan, on 13-15 November 2000.

Advertising and the World Wide Web David W. Schumann,Esther Thorson,1999-04 The chapters provide a wide-ranging view of issues addressing how advertisers can proceed on the Internet and World Wide Web. An initial chapter traces the development of Web advertising from its very beginnings as it was represented and discussed in the pages of Advertising Age. Although there is a noticeable trend to define Web advertising by comparing it to traditional media, it is clear that Web advertising just won't fit the old mold. Keith Reinhard of DDB Needham actually articulates this linkage between the old and new in his invited chapter. What the reader will encounter in Advertising and the World Wide Web is a solid conception of how Web advertising is different from anything that has come before. There are numerous discussions on consumer and advertiser interactivity, the role of Web advertising within larger campaigns, audience segmentation, and alternative Web-based promotion formats. The five sections cover definition and theory, structure, specific applications, legal issues, and the voice of the practitioner. Although there remain a few nay-sayers concerning the future of Web advertising, the reader will be able to see just how incredibly high-impact this new medium has become and the vast potential that it holds for future promotional endeavors.
