The Divine Office in the Latin Middle Ages Margot E. Fassler,Rebecca A. Baltzer,2000-08-17 The Divine Office--the cycle of daily worship other than the Mass--is the richest source of liturgical texts and music from the Latin Middle Ages. However, its richness, the great diversity of its manuscripts, and its many variations from community to community have made it difficult to study, and it remains largely unexplored terrain. This volume is a practical guide to the Divine Office for students and scholars throughout the field of medieval studies. The book surveys the many questions related to the Office and presents the leading analytical tools and research methods now used in the field. Beginning with the Office in the early Middle Ages, the book covers manuscript sources and their contents; regional developments and variations; the relationship between the Office, the Mass, and other ceremonies and repertories; and the deep links between the Office and medieval hagiography. The book concludes with a discussion of recent technical advances for handling the enormous amounts of evidence on the Office and its performance, in particular CANTUS, the vast electronic database developed by Ruth Steiner of Catholic University for the analysis of

chant repertoires. The Divine Office in the Latin Middle Ages is an essential resource for anyone studying medieval liturgy. Its accessible style and broad coverage make it an important basic reference for a wide range of students and scholars in art history, religious studies, social history, literature, musicology, and theology.

Object-Oriented Graphics Peter Wisskirchen, 2012-12-06 At present, object-oriented programming is emerging from the research laboratories and invading into the field of industrial applications. More and more products have been implemented with the aid of object-oriented programming techniques and tools, usually as extensions of traditional languages in hybrid development systems.

Some of the better known examples are OSF-Motif, News, Objective-C on the NeXT computer, the C extension C++, and CLOS an object oriented extension of LISP. All of these developments incorporate interactive graphics. Effective object-oriented systems in combination with a graphics kernel does it mean that the field of computer graphics has now become merely an aspect of the object-oriented world? We do not think so. In spite of interesting individual developments, there are still no sound object-oriented graphics systems available. If it is desired to develop a complex graphics application embedded in a window-oriented system then it is still necessary to work with elementary tools. What is to be displayed and interactively modified inside a window must be specified with a set of graphics primitives at a low level, or has to be written with a standardized graphics kernel system such as GKS or PHIGS, i. e. , by kernels specified and implemented in a non-object-oriented style. With the terms GKS and PHIGS we enter the world of international graphics standards. GKS and PHIGS constitute systems, not mere collections of graphics primitives.
