Commentary on the Old Testament C. F. Keil,Franz Delitzsch,2014-06-27 Carl Friedrich Keil (1807 – 1888) and Franz Delitzsch (1813 – 1890) were conservative German Lutheran Old Testament scholars whose commentary on the Old Testament has remained a classic for well over a century.

Brown, Driver & Briggs Hebrew Lexicon Brown, Driver and Briggs,2022-04-26 A Hebrew and English Lexicon of the Old Testament, more commonly known as Brown–Driver–Briggs or BDB (from the name of its three authors) is a standard reference for Biblical Hebrew and Biblical Aramaic, first published in 1906. It was organized by (Hebrew) alphabetical order of three letter roots, but we put in Strong numbering order. The Brown-Driver-Briggs Hebrew and English Lexicon. Since it first appeared in the early part of the twentieth century, BDB has been considered the finest and most comprehensive Hebrew lexicon available to the English-speaking student. Based upon the classic work of Wilhelm Gesenius, the father of modern Hebrew lexicography, BDB gives not only dictionary definitions for each word, but relates each word to its Old Testament usage and categorizes its nuances of meaning. BDB's exhaustive coverage of Old Testament Hebrew words, as well as its unparalleled usage of cognate languages and the wealth of background sources consulted and quoted, render BDB an invaluable resource for all students of the Bible.

Clean Production K.B. Misra,2012-12-06 The world has witnessed several revolutions since the dawn of industrial revolution some two centuries ago. During the current century itself, three revolutions in the area of communication, information processing and quality have taken place and each time the standard of living of man improved beyond predictions. But during the same period, the world population has also phenomenally increased

dwarfing the gains achieved from the development. Increased level of industrial activity to meet the of humanity has caused irreversible damage to the pristine environment that the demand Earth once had. Economic disparity between the haves and havenots has widened, aggravating the situation further more. Ozone layer depletion, warming up of Earth's atmosphere and the pollution created by uncontrolled industrial activity to gain economic strength are now assuming the proportion of a catastrophe that may eventually threaten the survival of life on Earth. Developed countries blame the Third World countries for the uncontrolled emissions through burning of fossil fuels and for wasting precious resources of energy by using inefficient and uneconomical technologies, while the developed countries are equally responsible for avoidable over-consumption and for the wastage of resources and energy and for not sharing the improved and efficient technologies with the developing countries. Thus the wastage by both these set of countries continues unabated. After all, resources of the world are finite and are meant to be shared by all its inhabitants.

Lasers in the Conservation of Artworks XIII Salvatore Siano,Daniele Ciofini,2023-11-03 Light allows us not only to see the works of art, but also to take care of them and preserve them for future generations, through diagnosis of the degradation and deterioration phenomena, conservation treatments, and monitoring based on light-material interaction processes. Recent progress on this subject was discussed during the 13th International Conference on Lasers in the Conservation of Artworks (LACONA XIII, Florence, Italy, 12-16 September 2022). This volume includes selected contributions presented at the conference on preservation topics, photonic techniques, and optimization methods. In particular, the papers focus on the development and use of innovative spectroscopic and imaging characterization techniques, the diagnostic knowledge of important artworks, and the optimization of the laser solution for preserving a growing variety of cultural assets, such as stone and metal artefacts, painted surfaces, textile, feather, and plastic artefacts. Lasers in the Conservation of Artworks XIII aims at scholars and operators of the community of preservation of cultural heritage, at teachers and students of training courses on diagnostic and conservation methods, applied physics, and chemistry, as well as archaeology and art history.

Materials Handbook François Cardarelli, 2018-07-09 The unique and practical Materials Handbook (third edition) provides quick and easy access to the physical and chemical properties of very many classes of materials. Its coverage has been expanded to include whole new families of materials such as minor metals, ferroalloys, nuclear materials, food, natural oils, fats, resins, and waxes. Many of the existing families—notably the metals, gases, liquids, minerals, rocks, soils, polymers, and fuels—are broadened and refined with new material and up-to-date information. Several of the larger tables of data are expanded and new ones added. Particular emphasis is placed on the properties of common industrial materials in each class. After a chapter introducing some general properties of materials, each of twenty-four classes of materials receives attention in its own chapter. The health and safety issues connected with the use and handling of industrial materials are included. Detailed appendices provide additional information on subjects as diverse as crystallography, spectroscopy, thermochemical data, analytical chemistry, corrosion resistance, and economic data for industrial and hazardous materials. Specific further reading sections and a general bibliography round out this comprehensive guide. The index and tabular format of the book makes light work of extracting what the reader needs to know from the wealth of factual information within these covers. Dr. François Cardarelli has spent many years compiling and editing materials data. His professional expertise and experience combine to make this handbook an indispensable reference tool for scientists and engineers working in numerous fields ranging from chemical to nuclear engineering. Particular emphasis is placed on the properties of common industrial materials in each class. After a chapter introducing some general properties of materials, materials are classified as follows. ferrous metals and their alloys; ferroalloys; common nonferrous metals; less common metals; minor metals; semiconductors and superconductors; magnetic materials; insulators and dielectrics; miscellaneous electrical materials; ceramics, refractories and glasses; polymers and elastomers; minerals, ores and gemstones; rocks and meteorites; soils and fertilizers; construction materials; timbers and woods; fuels, propellants and explosives; composite materials; gases; liquids; food, oils, resin and waxes; nuclear materials. food materials
