power the physics classroom - May 04
2023
web mathematically it is computed
using the following equation power
work time or $p = \frac{w}{t}$ the standard
metric unit of power is the watt as
is implied by the equation for power
a unit of power is equivalent to a
unit of work divided by a unit of
time thus a watt is equivalent to a
joule second
work and energy review with answers 1
the physics classroom - Jun 05 2023
web 1 which of the following
statements are true about work

include all that apply work is a form of energy a watt is the standard metric unit of work units of work would be equivalent to a newton times a meter a $\text{kg m}^2 \text{s}^{-2}$ would be a unit of work work is a time based quantity it is dependent upon how fast a force displaces an object

potential energy the physics

classroom - Apr 03 2023

web power an object can store energy as the result of its position for example the heavy ball of a demolition machine is storing energy when it is held at an elevated position this stored energy of position is referred to as potential energy similarly a drawn bow is able to store energy as the result of its position

work and energy review with answers 2
physics classroom - Oct 29 2022

web answer a for any given situation the work done by a force can be calculated using the equation $w = f d \cos \theta$ where f is the force doing the work d is the displacement of the object and θ is the angle between the force and the displacement
