Trace Metals in a Tropical Mangrove Wetland Santosh Kumar
Sarkar,2017-08-09 This book offers a comprehensive and
accessible guide covering various aspects of trace metal
contamination in abiotic and biotic matrices of an iconic Indian
tropical mangrove wetland – Sundarban. Divided into nine
chapters, the book begins by discussing the fundamental concepts
of sources, accumulation rate and significance of trace metal
speciation, along with the impact of multiple stressors on trace
metal accumulation, taking into account both tourist activities and
the exacerbating role of climate change. The second chapter
presents a detailed account of the sampling strategy and
preservation of research samples, followed by exhaustive
information on sediment quality assessment and ecological risk,
instrumental techniques in environmental chemical analyses,

quality assurance and quality control, along with the Sediment Quality Guidelines (SQGs). Using raw data, the sediment quality assessment indices (e.g., pollution load index, index of geoaccumulation, Nemerow Pollution Load Index etc.) and conventional statistical analyses are worked out and interpreted precisely, allowing students to readily evaluate and interpret them. This is followed by chapters devoted to trace metal accumulation in sediments and benthic organisms, as well as acid-leachable and geochemical fractionation of trace metals in sediments. The book then focuses on chemical speciation of butylin and arsenic in sediments as well as macrozoobenthos (polychaetous annelids). Finally, potential positive role of the dominant mangrove *Avicennia* in sequestering trace metals from rhizosediments of Sundarban Wetland is elaborately discussed. This timely reference book provides a versatile and in-depth account for understanding the emerging problems of trace metal contamination – issues that are relevant for many countries around the globe.

Metal Organic Frameworks for Wastewater Contaminant Removal Arun Lal Srivastav, Lata Rani, Jyotsna Kaushal, Tien Duc Pham, 2023-11-06 Metal Organic Frameworks for Wastewater Contaminant Removal Discover a groundbreaking new wastewater decontamination technology The removal of wastewater contaminants is a key aspect of the water cycle, allowing water to be fed safely back into circulation within a given ecosystem. Metal-Organic Frameworks (MOFs) are a new class of porous materials which can reversibly bind and sequester both metal ions and potentially harmful organic substances, giving them a potentially crucial role in the targeted removal of wastewater contaminants. They may also enable significant cost and energy savings over now-conventional ion exchangers in water treatment plants. Metal Organic Frameworks for Wastewater Contaminant Removal provides an accessible, practical guide to the development, evaluation, and potential applications of MOFs in maintaining the

water cycle. It begins with an overview of the major metallic and non-metallic contaminants found in wastewater and their interactions with major MOF-based materials, before moving to the challenges and opportunities provided by MOFs in the pursuit of a sustainable, energy-efficient water cycle. The result is a groundbreaking resource in the ever-expanding global fight to keep water clean and safe. Metal Organic Frameworks for Wastewater Contaminant Removal readers will also find: MOF technology and its water treatment applications discussed in depth for the first time in a major publication Comparison with existing decontamination technologies and environmental risk assessment Applications for environmental as well as industrial toxicants based on recent research and on case studies Metal Organic Frameworks for Wastewater Contaminant Removal is indispensable for water chemists, chemical engineers, environmental chemists, and for any researchers or industry professionals working with water decontamination technologies.

Advances in Environmental Technologies Ji Zhao, Reza Iranpour, Xin Yong Li, Bo Jin, 2013-08-16 Selected, peer reviewed papers from the 2013 2nd International Conference on Energy and Environmental Protection (ICEEP 2013), April 19-21, 2013, Guilin, China

Advances in Natural Hazards and Hydrological Risks: Meeting the Challenge Francisco Fernandes, Ana Malheiro, Helder I. Chaminé, 2020-01-02 This book gathers the proceedings of the 2nd International Workshop on Natural Hazards (NATHAZ'19), held in Lajes do Pico, Pico Island, Azores in 2019. Natural hazards constitute the threat of a naturally occurring event having a negative effect on human beings. These effects are often called natural disasters. Among the natural hazards and potential disasters to be considered are: earthquakes, volcanic eruptions, landslides, subsidence, floods, droughts and coastal erosion. In addition, there are anthropogenic hazards that occur as a result of human interactions with the environment. They include

technological hazards, which occur due to exposure to hazardous substances in the environment. Grasping the behaviour of natural systems requires a comprehensive understanding of climatology, geology and hydrology data and dynamics. Thus, it is important to conduct hazard and risk assessment studies for meaningful hazard mitigation. Further, the book demonstrates that an accurate understanding of natural systems and interactions between engineering and natural resources is of vital significance to the entire socio-economic sector. This volume offers an overview of natural hazards in model regions in Europe, America, and Atlantic islands. Providing new insights on the characterisation, assessment, protection and modelling of geological hazards, water systems, urban areas and coastal zones, it represents a valuable resource for all researchers and practitioners in the fields of Geosciences, Hydrology, Water Resources, Natural Hazards, Environments and Engineering. Main topics include: 1. Natural Hazards and Disasters 2. Sustainable Water Systems and Climate Change 3. Technological Hazards and Engineering Design

Sediments in the Tema Harbour (Ghana) Benjamin O.

Botwe,2018-07-11 Sediment pollution and accumulation in harbours are major environmental issues and studies that advance their solutions are essential for harbour sustainability. This book provides the first comprehensive assessment of chemical pollution in sediments and sediment accumulation rates in the tropical Tema Harbour (Ghana). This book contributes to improving our ability to use an integrated approach involving sediment chemistry and bioassays in one comprehensive assessment of the contamination state of a tropical coastal environment. Whole-sediment toxicity bioassays using the amphipod *Corophium volutator* and the polychaete *Hediste diversicolor* as bioindicators were combined with data on concentrations of total metal and metal binding forms, radionuclides, organochlorine pesticides and polycyclic aromatic hydrocarbons in bottom sediments as well as total metal concentrations in settling silt-clay particles collected by sediment traps to characterise the hazard, risk and impact of sediments from the tropical coastal Tema Harbour.
