Picture Perfect Frame Lynn Cahoon,2021-03-16 As the owner of Coffee, Books, and More, Jill Gardner likes to support other Main Street businesses, so she attends a paint-and-sip event where, sadly, her brushstrokes look more like blobs. It's still fun,

though--aside from some disruption by a couple doing more sipping than painting. Jill's police-detective boyfriend is on alert, but a designated driver volunteers to take the drunken pair back to their bed and breakfast, and everything seems resolved. Until the wife's body turns up the next morning back in the studio. The victim, Nan, is from out of town, so it's hard to imagine who'd have a motive aside from her spouse. Now, in between puzzling over her fortuneteller neighbor's strange behavior, preparing for her best friend's wedding, and pouring cups of java at the bookstore, Jill must uncover the secrets of Nan's life and find out who wanted her out of the picture . . .--Publisher description.

Autonomous Robots Research Advances Weihua Yang,2008

Autonomous robots are robots which can perform desired tasks in unstructured environments without continuous human guidance. Many kinds of robots have some degree of autonomy. Different robots can be autonomous in different ways. A high degree of autonomy is particularly desirable in fields such as space exploration, where communication delays and interruptions are unavoidable. Some modern factory robots are autonomous within the strict confines of their direct environment. The exact orientation and position of the next object of work and (in the more advanced

factories) even the type of object and the required task must be determined. This can vary unpredictably (at least from the robot's point of view). One important area of robotics research is to enable the robot to cope with its environment whether this be on land, underwater, in the air, underground, or in space. This book presents the latest research from around the globe.

Electronic String Art Stephen Erfle, 2024-02-20 String art is a well-known and popular activity that uses string, a board, and nails to produce artistic images (although there are variations that use different modalities). This activity is beloved because simple counting rules are used to create beautiful images that can both adorn walls and excite young minds. The downside of this highly tactile activity is that it is quite time-consuming and rigid. By contrast, electronic string art offers much more flexibility to set up

or change nail locations and counting rules, and the images created from those changes change instantaneously. Electronic String Art: Rhythmic Mathematics invites readers to use the author's digital resources available on the ESA website to play with the parameters inherent in string art models while offering concise, accessible explanations of the underlying mathematical principles regarding how the images were created and how they change. Readers will have the opportunity to create visually beautiful works of art while learning concepts from geometry, number theory, and modular arithmetic from approximately 200 short-interdependent sections. Features Readers are able to drill-down on images in order to understand why they work using short (1 to 2 page) stand-alone sections Sections are lessons that were created so that they could be digested in a single sitting These sections are stand-alone in the sense that they need not be read sequentially but can be referred to based on images that the reader finds interesting An open-ended, inherently flexible teaching resource for elementary, middle, and high school-level mathematics The most mathematically challenging sections (or portions of a section) are designated MA and may not be accessible to elementary and middle school readers Will be appreciated by anyone interested in

recreational mathematics or mathematical artworks even if the users are not interested in the underlying mathematics Includes exercises, solutions, and many online digital resources These QR codes take you to these digital resources. One takes you directly to the web version of the string art model (used as a starting point for teaching the parameters of the model in Section 25.5). The other takes you to the ESA web page with additional links to a variety of resources.
