The Image of Christ in Modern Art Richard Harries, 2016-03-03 The Image of Christ in Modern Art

explores the challenges presented by the radical and rapid changes of artistic style in the 20th century to artists who wished to relate to traditional Christian imagery. In the 1930s David Jones said that he and his contemporaries were acutely conscious of 'the break', by which he meant the fragmentation and loss of a once widely shared Christian narrative and set of images. In this highly illustrated book, Richard Harries looks at some of the artists associated with the birth of modernism such as Epstein and Rouault as well as those with a highly distinctive understanding of religion such as Chagall and Stanley Spencer. He discusses the revival of confidence associated with the rebuilding of Coventry Cathedral after World War II and the commissioning of work by artists like Henry Moore, Graham Sutherland and John Piper before looking at the very testing last quarter of the 20th century. He shows how here, and even more in our own time, fresh and important visual interpretations of Christ have been created both by well known and less well known artists. In conclusion he suggests that the modern movement in art has turned out to be a friend, not a foe of Christian art. Through a wide and beautiful range of images and insightful text, Harries explores the continuing challenge, present from

the beginning of Christian art, as to how that which is visual can in some way indicate the transcendent.

Recent Advances in Visual Information Systems SShi-Kuo Chang,Zen Chen,Suh-Yin

Lee,2002-02-27 Visualinformationsystemsareinformationsystemsforvisualcomputing.Visual computing is computing on visual objects. Some visual objects such as images are inherently visual in the sense that their primary representation is the visual representation.Somevisualobjectssuchasdatastructuresarederivativelyvisual in the sense that their primary representation is not the visual representation, but can be transformed into a visual representation. Images and data structures are the two extremes. Other visual objects such as maps may fall somewhere in between the two. Visual computing often involves the transformation from one type of visual objects into another type of visual objects, or into the same type of visual objects, to accomplish certain objectives such as information reduction, object recognition, and so on. In visual information systems design it is also important to ask the following question: who performs the visual

computing? The answer to this question determines the approach to visual computing. For instance it is possible that primarily the computer performs the visual computing and the human merely observes the results. It is also possible that primarily the human performs the visual computing and the computer plays a supporting role. Often the human and the computer are both involved as equal partners in visual computing and there are visual interactions. Formal or informal visual languages are usually needed to facilitate such visual interactions.

Learn Docker in a Month of Lunches Elton Stoneman, 2020-08-04 Summary Go from zero to production readiness with Docker in 22 bite-sized lessons! *Learn Docker in a Month of Lunches* is an accessible task-focused guide to Docker on Linux, Windows, or Mac systems. In it, you'll learn practical Docker skills to help you tackle the challenges of modern IT, from cloud migration and

microservices to handling legacy systems. There's no excessive theory or niche-use cases—just a quick-and-easy guide to the essentials of Docker you'll use every day. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications.

About the technology The idea behind Docker is simple: package applications in lightweight virtual containers that can be easily installed. The results of this simple idea are huge! Docker makes it possible to manage applications without creating custom infrastructures. Free, open source, and battle-tested, Docker has quickly become must-know technology for developers and administrators.

About the book Learn Docker in a Month of Lunches introduces Docker concepts through a series of brief hands-on lessons. Following a learning path perfected by author Elton Stoneman, you'll run containers by chapter 2 and package applications by chapter 3. Each lesson teaches a practical skill you can practice on Windows, macOS, and Linux systems. By the end of the month you'll know how to containerize and run any kind of application with Docker. What's inside Package applications to run in containers Put containers into production Build optimized Docker images Run containerized apps at

scale About the reader For IT professionals. No previous Docker experience required. About the author Elton Stoneman is a consultant, a former architect at Docker, a Microsoft MVP, and a Pluralsight author. Table of Contents PART 1 - UNDERSTANDING DOCKER CONTAINERS AND IMAGES 1. Before you begin 2. Understanding Docker and running Hello World 3. Building your own Docker images 4. Packaging applications from source code into Docker Images 5. Sharing images with Docker Hub and other registries 6. Using Docker volumes for persistent storage PART 2 - RUNNING DISTRIBUTED APPLICATIONS IN CONTAINERS 7. Running multi-container apps with Docker Compose 8. Supporting reliability with health checks and dependency checks 9. Adding observability with containerized monitoring 10. Running multiple environments with Docker Compose 11. Building and testing applications with Docker and Docker Compose PART 3 - RUNNING AT SCALE WITH A CONTAINER ORCHESTRATOR 12. Understanding orchestration: Docker Swarm and Kubernetes 13. Deploying distributed applications as stacks in Docker Swarm 14. Automating releases with upgrades and rollbacks 15. Configuring Docker for secure remote access and CI/CD 16. Building

Docker images that run anywhere: Linux, Windows, Intel, and Arm PART 4 - GETTING YOUR CONTAINERS READY FOR PRODUCTION 17. Optimizing your Docker images for size, speed, and security 18. Application configuration management in containers 19. Writing and managing application logs with Docker 20. Controlling HTTP traffic to containers with a reverse proxy 21. Urban Flood Management Chris Zevenbergen, Adrian Cashman, Niki Evelpidou, Erik Pasche, Stephen Garvin, Richard Ashley, 2010-09-21 Along with windstorms, floods are the most

common and widespread of all natural disasters. Although they can often be predicted, they cause loss of life, damage and destruction, as many urban communities are located near coasts and rivers. In terms of victims, floods are responsible for more than half the deaths caused by natural catastrophes. As f

Artists Respond Melissa Ho,Thomas Crow,Erica Levin,Mignon Nixon,Martha Rosler,Smithsonian American Art Museum,2019-04-23 How the Vietnam War changed American art By the late 1960s, the United States was in a pitched conflict in Vietnam, against a foreign enemy, and at home—between Americans for and against the war and the status quo. This powerful book showcases how American artists responded to the war, spanning the period from Lyndon B. Johnson’s fateful decision to deploy U.S. Marines to South Vietnam in 1965 to the fall of Saigon ten years later. **Artists Respond** brings together works by many of the most visionary and provocative artists of the period, including Asco, Chris Burden, Judy Chicago, Corita Kent, Leon Golub, David Hammons, Yoko Ono, and Nancy Spero.

It explores how the moral urgency of the Vietnam War galvanized American artists in unprecedented ways, challenging them to reimagine the purpose and uses of art and compelling them to become politically engaged on other fronts, such as feminism and civil rights. The book presents an era in which artists struggled to synthesize the turbulent times and participated in a process of free and open questioning inherent to American civic life. Beautifully illustrated, *Artists Respond* features a broad range of art, including painting, sculpture, printmaking, performance and body art, installation, documentary cinema and photography, and conceptualism. The Gallery of Wonders Marc Remus, 2016-01-14 When a mysterious fire ravages the town of Donkleywood, causing the death of her beloved grandfather Nickolas, eleven-year-old Holly O'Flanigan, numb with grief, loses all hope of ever becoming a famous artist like him or of escaping

her abusive foster family, the Smoralls. While hiding from them, Holly discovers a secret attic where her grandfather left a decidedly unusual paintbrush and a canvas with the image of a fantasy world—one Holly and three friends literally fall into. The painting is a gateway to the parallel world of Magora, where everything and everyone are created by painting. With her three sidekicks in tow, Holly enrolls in the exciting Cliffony Art Academy, where they learn to weave painting with magic, just as Grandfather Nickolas could. Her hopes of becoming a painter and escaping the Smoralls finally seem to be coming true. Meanwhile, valuable artwork is being stolen from the Gallery of Wonders. As these paintings could provide a portal back to the real world, Holly begins a search for the thief. She believes that the dark Duke of Cuspidor might be the culprit and that he has a spy among the instructors of Cliffony. But Holly's self-doubt keeps her from making any progress in school, and she struggles to learn the brushstrokes she needs so urgently. They not only bring objects, people, and animals to life, they're also Holly's best defense against the dangerous Unfinished-monstrous beings created when an artist leaves a painting incomplete. Like vampires, the Unfinished hunger for the one thing that can

flesh out their bodies-blood. And because Holly is a Gindar, an artist with the rare ability to create a brand new species, they want Holly's blood most of all.
