The Oxford Handbook of Deaf Studies in Learning and Cognition Marc Marschark,Harry Knoors,2020-04-15 In recent years, the intersection of cognitive psychology, developmental psychology, and neuroscience with regard to deaf individuals has received increasing attention from a variety of academic and educational audiences. Both research and pedagogy have addressed questions about whether deaf children learn in the same ways that hearing children learn, how signed languages and spoken languages might affect different aspects of cognition and cognitive development, and the ways in which hearing loss influences how the brain processes and retains information. There are now a number of preliminary answers to these questions, but there has been no single forum in which research into learning and cognition is brought together. The Oxford Handbook of Deaf Studies in Learning and Cognition aims to provide this shared forum, focusing exclusively on learning, cognition, and cognitive development from theoretical, psychological, biological, linguistic, social-emotional, and educational perspectives. Each chapter includes state-of-the-art research conducted and reviewed by international experts in the area. Drawing this research together, this volume allows for a synergy of ideas that possesses the potential to move research, theory, and practice forward.

Addressing the Unmet Needs of Cataract Patients: When Quality of Vision Can Make the Difference in Quality of Life Rita Mencucci, Eleonora Favuzza, Filomena Ribeiro, 2023-10-13 Due to the ageing population, the need for cataract surgery is increasing very steeply in line with demographic change. Cataract surgery is a highly successful and cost-effective intervention, but the implantation of conventional monofocal intraocular lenses (IOLs) only allows a restoration of distance vision, with minimal postoperative functionality of near and intermediate vision, which are necessary for many common daily tasks. Although the removal of the opacified crystalline lens has been demonstrated to have a very positive impact on the mental health, daily functioning, and Quality of Life (QoL) of patients, it is not surprising that the poor visual restoration achieved with conventional monofocal IOLs at different near and intermediate distances might limit patient functioning and consequently QoL, considering changing lifestyles and increased working years. Therefore, this has led to a growing interest toward IOLs that may also reduce spectacle dependence for intermediate and near distances.
