### **Sacred Music as Public Image for Holy Roman Emperor Ferdinand III** Dr

Andrew H Weaver, 2013-01-28 Ferdinand III played a crucial role both in helping to end the Thirty Years' War and in re-establishing Habsburg sovereignty within his hereditary lands, and yet he remains one of the most neglected of all Habsburg emperors. The underlying premise of *Sacred Music as Public Image for Holy Roman Emperor Ferdinand III* is that Ferdinand's accomplishments came not through diplomacy or strong leadership but primarily through a skillful manipulation of the arts, through which he communicated important messages to his subjects and secured their allegiance to the Catholic Church. An important locus for cultural activity at court, especially as related to the Habsburgs' political power, was the Emperor's public image. Ferdinand III offers a fascinating case study in monarchical representation, for the war necessitated that he revise the image he had cultivated at the beginning of his reign, that of a powerful, victorious warrior. Weaver argues that by focusing on the patronage of sacred music (rather than the more traditional visual and theatrical means of representation), Ferdinand III was able to uphold his reputation as a pious Catholic reformer and subtly revise his triumphant martial image without sacrificing his power, while also achieving his Counter-Reformation goal of unifying his hereditary lands under the Catholic church. Drawing upon recent methodological approaches to the representation of other early modern monarchs, as well as upon the theory of confessionalization, this book places the sacred vocal music composed by imperial musicians into the rich cultural, political, and religious contexts of mid-seventeenth-century Central Europe. The book incorporates dramatic productions such as opera, oratorio, and Jesuit drama (as well as works in other media), but the primary focus is the more numerous and more frequently performed Latin-texted paraliturgical genre of the motet, which has generally not been considered by scholars as a vehicle for monarchical representation. By examining the representation of this little-studied emperor during a crucial time in European history, this book opens a window into the unique world view of the Habsburgs, allowing for a previously untold narrative of the end of the Thirty Years' War as seen through the eyes of this important ruling family.

**Softimage** Ingrid Hoelzl, Remi Marie, 2015-09-01 With today's digital technology, the image is no longer a stable representation of the world, but a programmable view of a database that is updated in real time. It no longer functions as a political and iconic representation, but plays a vital role in synchronic data-to-data relationships. It is not only part of a program, but it contains its own operating code: the image is a program in itself. *Softimage* aims to account for that new reality, taking readers on a journey that gradually undoes our unthinking reliance on the apparent solidity of the photographic image and building in its place an original and timely theorization of the digital image in all its complexity, one that promises to spark debate within the evolving fields of image studies and software studies.

**Intelligent Image Processing in Prolog** Bruce G. Batchelor, 2012-12-06 After a slow and somewhat tentative beginning, machine vision systems are now finding widespread use in industry. So far, there have been four clearly discernible phases in their development, based upon the types of images processed and how that processing is performed: (1) Binary (two level) images, processing in software (2) Grey-scale images, processing in software (3) Binary or grey-scale images processed in fast, special-purpose hardware (4) Coloured/multi-spectral images Third-generation vision systems are now commonplace, although a large number of binary and software-based grey-scale processing systems are still being sold. At the moment, colour image processing is commercially much less significant than the other three and this situation may well remain for some time, since many industrial artifacts are nearly monochrome and the use of colour increases the cost of the equipment significantly. A great deal of colour image

processing is a straightforward extension of standard grey-scale methods. Industrial applications of machine vision systems can also be sub divided, this time into two main areas, which have largely retained distinct identities: (i) Automated Visual Inspection (A VI) (ii) Robot Vision (RV) This book is about a fifth generation of industrial vision systems, in which this distinction, based on applications, is blurred and the processing is marked by being much smarter (i. e. more intelligent) than in the other four generations.

Handbook of Computer Vision Algorithms in Image Algebra Joseph N. Wilson, Gerhard X. Ritter, 2000-09-21 Image algebra is a comprehensive, unifying theory of image transformations, image analysis, and image understanding. In 1996, the bestselling first edition of the Handbook of Computer Vision Algorithms in Image Algebra introduced engineers, scientists, and students to this powerful tool, its basic concepts, and its use in the concise representation

Recent Trends in Image Processing and Pattern Recognition K. C. Santosh, Ravindra S. Hegadi, 2019-07-15 This three-book set constitutes the refereed proceedings of the Second International Conference on Recent Trends in Image Processing and Pattern Recognition (RTIP2R) 2018, held in Solapur, India, in December 2018. The 173 revised full papers presented were carefully reviewed and selected from 374 submissions. The papers are organized in topical sections in the three volumes. *Progress in Pattern Recognition, Image Analysis, Computer Vision, and Applications* Isabelle Bloch, Roberto M. Cesar, Jr., 2010-11-02 Pattern recognition is a central topic in contemporary computer sciences, with continuously evolving topics, challenges, and methods, including machine learning, content-based image retrieval, and model- and knowledge-based - proaches, just to name a few. The Iberoamerican Congress on Pattern Recognition (CIARP) has become established as a high-quality conference, highlighting the recent evolution of the domain. These proceedings include all papers presented during the 15th edition of this conference, held in Sao Paulo, Brazil, in November 2010. As was the case for previous conferences, CIARP 2010 attracted participants from around the world with the aim of promoting and disseminating - going research on mathematical methods and computing techniques for pattern recognition, computer vision, image analysis, and speech recognition, as well as their applications in such diverse areas as robotics, health, entertainment, space exploration, telecommunications, data mining, document analysis, and natural language processing and recognition, to name only a few of them. Moreover, it provided a forum for scientific research, experience exchange, sharing new knowledge and increasing cooperation between research groups in pattern recognition and related areas. It is important to underline that these conferences have contributed significantly to the growth of national associations for pattern recognition in the Iberoamerican region, all of them as members of the International Association for Pattern Recognition (IAPR).

**Mesh Processing in Medical Image Analysis 2012** Joshua A. Levine, Rasmus R. Paulsen, Yongjie Zhang, 2012-09-08 This book constitutes the refereed proceedings of the International Workshop on Mesh Processing in Medical Image Analysis, MeshMed 2012, held in Nice, France, in October 2012 in conjunction with MICCAI 2012, the 15th International Conference on Medical Image Computing and Computer Assisted Intervention. The book includes 16 submissions, 8 were selected for presentation along with the 3 plenary talks representative of the meshing, and 8 were selected for poster presentations. The papers cover a broad range of topics, including statistical shape

analysis and atlas construction, novel meshing approaches, soft tissue simulation, quad dominant meshing and mesh based shape descriptors. The described techniques were applied to a variety of medical data including cortical bones, ear canals, cerebral aneurysms and vascular structures.

**The Mormon Image in the American Mind** J.B. Haws,2013-12 What do Americans think about Mormons - and why do they think what they do? This is a story where the Osmonds, the Olympics, the Tabernacle Choir, Evangelical Christians, the Equal Rights Amendment, Sports Illustrated, and even Miss America all figure into the equation. The book is punctuated by the presidential campaigns of George and Mitt Romney, four decades apart. A survey of the past half-century reveals a growing tension inherent in the public's views of Mormons and the public's views of the religion that inspires that body.

**Regularization and Bayesian Methods for Inverse Problems in Signal and Image Processing** Jean-Francois Giovannelli,Jérôme Idier,2015-02-02 The focus of this book is on ill-posed inverse problems. These problems cannot be solved only on the basis of observed data. The building of solutions involves the recognition of other pieces of a priori information. These solutions are then specific to the pieces of information taken into account. Clarifying and taking these pieces of information into account is necessary for grasping the domain of validity and the field of application for the solutions built. For too long, the interest in these problems has remained very limited in the signal-image community. However, the community has since recognized that these matters are more interesting and they have become the subject of much greater enthusiasm. From the application field's point of view, a significant part of the book is devoted to conventional subjects in the field of inversion: biological and medical imaging, astronomy, non-destructive evaluation, processing of video sequences, target tracking, sensor networks and digital communications. The variety of chapters is also clear, when we examine the acquisition modalities at stake: conventional modalities, such as tomography and NMR, visible or infrared optical imaging, or more recent modalities such as atomic force imaging and polarized light imaging.

What is an Image? James Elkins,2011 Brings together historians, philosophers, critics, postcolonial theorists, and curators to ask how images, pictures, and paintings are conceptualized. Issues discussed include concepts such as image and picture in and outside the West; semiotics; whether images are products of discourse; religious meanings; and the ethics of viewing--Provided by publisher.

A Critical Analysis of the Representation of Female Body Image in Women Magazines Asheida Charles,2016-01-14 Seminar paper from the year 2014 in the subject Communications - Mass Media, grade: 94%, Communication University of China (Institute of Communication Studies), course: Theories of Communication, language: English, abstract: The purpose of this paper is to examine and criticize the representation of female body image by mass media. For decades the bodies of women have been tailored to highlight products and services by advertisers and owners of the media as a means of generating capital gains. This tailoring, has led to what many have come to accept as the 'ideal image of beauty' that every woman should endeavor to achieve. This paper continues the discussion on a topic that is widely and frequently discussed. The theoretical framework that this paper employs is based on one of the most applauded theory in communication studies; The Political Economy of Communication and Media theory, which was first coined by Dallas William Smythe. This theory is pertinent to understand the presence of the commercial forces behind creating and maintaining this ideal body image, particularly by advertisers in mass media. The form of mass media that this paper concentrates on is women's magazine, with specific focus on advertisements regarding

beauty and cosmetic products/services. Additionally, case studies in the US and China are used to depict the influence mass media representation of female body image on women.

*Images in Social Media* Susanne Ørnager, Haakon Lund, 2022-06-01 This book focuses on the methodologies, organization, and communication of digital image collection research that utilizes social media content. (Image is here understood as a cultural, conventional, and commercial—stock photo—representation.) The lecture offers expert views that provide different interpretations of images and their potential implementations. Linguistic and semiotic methodologies as well as eye-tracking research are employed to both analyze images and comprehend how humans consider them, including which salient features generally attract viewers' attention. This literature review covers image—specifically photographic—research since 2005, when major social media platforms emerged. A citation analysis includes an overview of co-citation maps that demonstrate the nexus of image research literature and the journals in which they appear. Eye tracking tests whether scholarly templates focus on the proper features of an image, such as people, objects, time, etc., and if a prescribed theme affects the eye movements of the observer. The results may point to renewed requirements for building image search engines. As it stands, image management already requires new algorithms and a new understanding that involves text recognition and very large database processing. The aim of this book is to present different image research areas and demonstrate the challenges image research faces. The book's scope is, by necessity, far from comprehensive, since the field of digital image research does not cover fake news, image manipulation, mobile photos, etc.; these issues are very complex and need a publication of their own. This book should primarily be useful for students in library and information science, psychology, and computer science.

*The Photographic Image in Digital Culture* Martin Lister, 2013-11-05 What does a new technology of images mean for the ways in which we encounter and use images in everyday life: in advertising, entertainment, news, evidence? And within our domestic and private worlds for our sense of self and identity; our view of the body and our sexuality? *The Photographic Image in Digital Culture* explores the technological transformation of the image and its implications for photography. Contributors investigate such issues as the relationship of technological change to visual culture; the new discourses of 'techno-culture'; medicine's new vision of the body, and interactive pornography. They also examine the cultural meanings of new surveillance images; shifts in the domestic consumption of images and their relationship to memory, history and biography; the social uses of video and computer games and the changing role of photography as document and as art.

*Images in Mind* Deborah Steiner, 2001 In archaic and classical Greece, statues played a constant role in people's religious, political, economic, aesthetic, and mental lives. Evidence of many kinds demonstrates that ancient Greeks thought about--and interacted with--statues in ways very different from our own. This book recovers ancient thinking about statues by approaching them through contemporary literary sources. It not only shows that ancient viewers conceived of images as more operative than aesthetic, but additionally reveals how poets and philosophers found in sculpture a practice "good to think with." Deborah Tarn Steiner considers how Greek authors used images to ponder the relation of a copy to an original and of external appearance to inner reality. For these writers, a sculpture could straddle life and death, encode desire, or occasion reflection on their own act of producing a text. Many of the same sources also reveal how thinking about statues was reflected in the objects' everyday treatment. Viewing representations of gods and heroes as vessels hosting a living force, worshippers ritually washed, clothed, and fed them in order to elicit the numinous presence within. By reading the plastic and verbal sources together, this book offers new insights into classical texts while

illuminating the practices surrounding the design, manufacture, and deployment of ancient images. Its argument that images are properly objects of cultural and social--rather than purely aesthetic--study will attract art historians, cultural historians, and anthropologists, as well as classicists.

### **MAPPING: Management and Processing of Images for Population Imaging**

Michel Dojat, Wiro Niessen, David N. Kennedy, 2017-09-04 Several recent papers underline methodological points that limit the validity of published results in imaging studies in the life sciences and especially the neurosciences (Carp, 2012; Ingre, 2012; Button et al., 2013; Ioannidis, 2014). At least three main points are identified that lead to biased conclusions in research findings: endemic low statistical power and, selective outcome and selective analysis reporting. Because of this, and in view of the lack of replication studies, false discoveries or solutions persist. To overcome the poor reliability of research findings, several actions should be promoted including conducting large cohort studies, data sharing and data reanalysis. The construction of large-scale online databases should be facilitated, as they may contribute to the definition of a “collective mind” (Fox et al., 2014) facilitating open collaborative work or “crowd science” (Franzoni and Sauermann, 2014). Although technology alone cannot change scientists’ practices (Wicherts et al., 2011; Wallis et al., 2013, Poldrack and Gorgolewski 2014; Roche et al. 2014), technical solutions should be identified which support a more “open science” approach. Also, the analysis of the data plays an important role. For the analysis of large datasets, image processing pipelines should be constructed based on the best algorithms available and their performance should be objectively compared to diffuse the more relevant solutions. Also, provenance of processed data should be ensured (MacKenzie-Graham et al., 2008). In population imaging this would mean providing effective tools for data sharing and analysis without increasing the burden on researchers. This subject is the main objective of this research topic (RT), cross-listed between the specialty section “Computer Image Analysis” of Frontiers in ICT and Frontiers in Neuroinformatics. Firstly, it gathers works on innovative solutions for the management of large imaging datasets possibly distributed in various centers. The paper of Danso et al. describes their experience with the integration of neuroimaging data coming from several stroke imaging research projects. They detail how the initial NeuroGrid core metadata schema was gradually extended for capturing all information required for future metaanalysis while ensuring semantic interoperability for future integration with other biomedical ontologies. With a similar preoccupation of interoperability, Shanoir relies on the OntoNeuroLog ontology (Temal et al., 2008; Gibaud et al., 2011; Batrancourt et al., 2015), a semantic model that formally described entities and relations in medical imaging, neuropsychological and behavioral assessment domains. The mechanism of “Study Card” allows to seamlessly populate metadata aligned with the ontology, avoiding fastidious manual entrance and the automatic control of the conformity of imported data with a predefined study protocol. The ambitious objective with the BIOMIST platform is to provide an environment managing the entire cycle of neuroimaging data from acquisition to analysis ensuring full provenance information of any derived data. Interestingly, it is conceived based on the product lifecycle management approach used in industry for managing products (here neuroimaging data) from inception to manufacturing. Shanoir and BIOMIST share in part the same OntoNeuroLog ontology facilitating their interoperability. ArchiMed is a data management system locally integrated for 5 years in a clinical environment. Not restricted to Neuroimaging, ArchiMed deals with multi-modal and multi-organs imaging data with specific considerations for data long-term conservation and confidentiality in accordance with the French legislation. Shanoir and ArchiMed are integrated into FLI-IAM1, the national French IT infrastructure for in vivo imaging.

### **Images of Otherness in Russia, 1547-1917** Kati Parppe, Bulat

Rakhimzianov,2023-04-25 Defining the Others, “them”, in relation to one’s own reference group, “us”, has been an essential phase in the formation of collective identities in any given country or region. In the case of Russia, the formulation of these binary definitions – sometimes taking a form of enemy images – can be traced all the way to medieval texts, in which religion represented the dividing line. Further, the ongoing expansion of the empire transferred numerous “external others” into internal minorities. The chapters of this edited volume examine the development and contexts of various images, perceptions and categories of the Others in Russia from the 16th century Muscovy to the collapse of the Russian empire.

**Images of Blood in American Cinema** Kjetil Rødje,2016-03-09 Through studying images of blood in film from the mid-1950s to the end of the 1960s, this path-breaking book explores how blood as an (audio)visual cinematic element went from predominately operating as a signifier, providing audiences with information about a film’s plot and characters, to increasingly operating in terms of affect, potentially evoking visceral and embodied responses in viewers. Using films such as *The Return of Dracula*, *The Tangler*, *Blood Feast*, *Two Thousand Maniacs*, *Color Me Blood Red*, *Bonnie and Clyde*, and *The Wild Bunch*, Rødje takes a novel approach to film history by following one (audio)visual element through an exploration that traverses established standards for film production and reception. This study does not heed distinctions regarding to genres (horror, western, gangster) or models of film production (exploitation, independent, studio productions) but rather maps the operations of cinematic images across marginal as well as more traditionally esteemed cinematic territories. The result is a book that rethinks and reassembles cinematic practices as well as aesthetics, and as such invites new ways to investigate how cinematic images enter relations with other images as well as with audiences.
