"With great tension, simmering heat, and clever banter, FOR BUTTER OR WORSE is a mouthwateringly delicious enemies-to-lovers romance."—Helen Hoang, USA Today bestselling author of *The Heart Principle* [A] sparkling romance...witty and lighthearted, with plenty of tender moments to keep readers invested, this work gets the enemies-to-lovers trope right.—Publishers Weekly They go together like water and oil... All chef Nina Lyon wants is to make a name for herself in the culinary world and inspire young women everywhere to do the same. For too long, she's been held back and underestimated by the male-dominated sphere of professional kitchens, and she's had enough. Now, as co-host of the competitive reality TV series *The Next Cooking Champ!*, she finally has a real shot at being top tier in the foodie scene. Too bad her co-host happens to be Hollywood's smarmiest jerk. Restaurateur Leo O'Donnell never means to get under Nina's skin. It just seems to happen, especially when the cameras are rolling. It's part of the anxiety and stress he has come to know all too well in this line of work. So nothing prepares him for the fallout after he takes one joke a smidge too far and Nina up and quits—on live TV. To make matters worse, the two are caught in what looks like a compromising situation by the paparazzi...and fans of the show go absolutely nuts. Turns out, a "secret romance" between Nina and Leo may just be what their careers need most. Now all they have to do is play along, without killing each other...and without catching feelings. Easy as artisanal shepherd's pie. Right?

**Softimage** Ingrid Hoelzl,Remi Marie,2015-09-01 With today's digital technology, the image is no longer a stable representation of the world, but a programmable view of a database that is updated in real time. It no longer functions as a political and iconic representation, but plays a vital role in synchronic data-to-data relationships. It is not only part of a program, but it contains its own operating code: the image is a program in itself. Softimage aims to account for that new reality, taking readers on a journey that gradually undoes our unthinking reliance on the apparent solidity of the photographic image and building in its place an original and timely theorization of the digital image in all its complexity, one that promises to spark debate within the evolving fields of image studies and software studies.

*Computational Modelling and Imaging for SARS-CoV-2 and COVID-19* S. Prabha,P. Karthikeyan,K. Kamalanand,N. Selvaganesan,2021-09-02 The aim of this book is to present new computational techniques and methodologies for the analysis of the clinical, epidemiological and public health aspects of SARS-CoV-2 and COVID-19 pandemic. The book presents the use of soft computing techniques such as machine learning algorithms for analysis of the epidemiological aspects of the SARS-CoV-2. This book clearly explains novel computational image processing algorithms for the detection of COVID-19 lesions in lung CT and X-ray images. It explores various computational methods for computerized analysis of the SARS-CoV-2 infection including severity assessment. The book provides a detailed description of the algorithms which can potentially aid in mass screening of SARS-CoV-2 infected cases. Finally the book also explains the conventional

epidemiological models and machine learning techniques for the prediction of the course of the COVID-19 epidemic. It also provides real life examples through case studies. The book is intended for biomedical engineers, mathematicians, postgraduate students; researchers; medical scientists working on identifying and tracking infectious diseases.

**Computational Analysis and Deep Learning for Medical Care** Amit Kumar Tyagi, 2021-08-10 The book details deep learning models like ANN, RNN, LSTM, in many industrial sectors such as transportation, healthcare, military, agriculture, with valid and effective results, which will help researchers find solutions to their deep learning research problems. We have entered the era of smart world devices, where robots or machines are being used in most applications to solve real-world problems. These smart machines/devices reduce the burden on doctors, which in turn make their lives easier and the lives of their patients better, thereby increasing patient longevity, which is the ultimate goal of computer vision. Therefore, the goal in writing this book is to attempt to

provide complete information on reliable deep learning models required for e-healthcare applications. Ways in which deep learning can enhance healthcare images or text data for making useful decisions are discussed. Also presented are reliable deep learning models, such as neural networks, convolutional neural networks, backpropagation, and recurrent neural networks, which are increasingly being used in medical image processing, including for colorization of black and white X-ray images, automatic machine translation images, object classification in photographs/images (CT scans), character or useful generation (ECG), image caption generation, etc. Hence, reliable deep learning methods for the perception or production of better results are a necessity for highly effective e-healthcare applications. Currently, the most difficult data-related problem that needs to be solved concerns the rapid increase of data occurring each day via billions of smart devices. To address the growing amount of data in healthcare applications, challenges such as not having standard tools, efficient algorithms, and a sufficient number of skilled data scientists need to be overcome. Hence, there is growing interest in investigating deep learning models and their use in e-healthcare applications. Audience Researchers in artificial intelligence, big data, computer science, and electronic engineering, as well as industry engineers in transportation, healthcare, biomedicine, military, agriculture.

*The Tuning of Place* Richard Coyne, 2010-03-26 How pervasive digital devices—smartphones, iPods, GPS navigation systems, and their networks—us formulate a sense of place and refine social relationships How do pervasive digital devices—smartphones, iPods, GPS navigation systems, and cameras, among others—influence the way we use spaces? In *The Tuning of Place*, Richard Coyne argues

that these ubiquitous devices and the networks that support them become the means of making incremental adjustments within spaces—of tuning place. Pervasive media help us formulate a sense of place, writes Coyne, through their capacity to introduce small changes, in the same way that tuning a musical instrument invokes the subtle process of recalibration. Places are inhabited spaces, populated by people, their concerns, memories, stories, conversations, encounters, and artifacts. The tuning of place—whereby people use their devices in their interactions with one another—is also a tuning of social relations. The range of ubiquity is vast—from the familiar phones and hand-held devices through RFID tags, smart badges, dynamic signage, microprocessors in cars and kitchen appliances, wearable computing, and prosthetics, to devices still in development. Rather than catalog achievements and predictions, Coyne offers a theoretical framework for discussing pervasive media that can inform developers, designers, and users as they contemplate interventions into the environment. Processes of tuning can lead to consideration of themes highly relevant to pervasive computing: intervention, calibration, wedges, habits, rhythm, tags, taps, tactics, thresholds, aggregation, noise, and interference.
