Modeling & Imaging of Bioelectrical Activity Bin He, 2010-07-03 Over the past several decades, much progress has been made in understanding the mechanisms of electrical activity in biological tissues and systems, and for developing non-invasive functional imaging technologies to aid clinical diagnosis of dysfunction in the human body. The book will provide full basic coverage of the fundamentals of modeling of electrical activity in various human organs, such as heart and brain. It will include details of bioelectromagnetic measurements and source imaging technologies, as well as biomedical applications. The book will review the latest trends in the field and comment on the future direction in this fast developing line of research.

Bioimaging in Neurodegeneration Patricia A. Broderick, David N. Rahni, Edwin H. Kolodny, 2007-11-05 Bioimaging is in the forefront of medicine for the diagnosis and helps to predict the progression of AD via mild cognitive treatment of neurodegenerative disease. Conventional magnetic impairment (MCI) studies. resonance imaging (MRI) uses interactive external magnetic fields Novel neuroimaging technologies, such as neuromolecular and resonant frequencies of

protons from water molecules. imaging (NMI) with a series of newly developed BRODERICK ® However, newer sequences, such as magnetization-prepared rapid PROBE sensors, directly image neurotransmitters, precursors, acquisition gradient echo (MPRAGE), are able to seek higher and metabolites in vivo, in real time and within seconds, at separate levels of anatomic resolution by allowing more rapid temporal and selective waveform potentials. NMI, which uses an imaging. Magnetic resonance spectroscopy (MRS) images electrochemical basis for detection, enables the differentiation of metabolic changes, enabling underlying pathophysiologic neurodegenerative diseases in patients who present with mesial dysfunction in neurodegeneration to be deciphered. Neuro- versus neocortical temporal lobe epilepsy. In fact, NMI has some 1 chemicals visible with proton H MRS include N-acetyl aspartate remarkable similarities to MRI insofar as there is technological (NAA), creatine/phosphocreatine (Cr), and choline (Cho); NAA dependence on electron and proton transfer, respectively, and is considered to act as an in vivo marker for neuronal loss and/or further dependence is seen in both NMI and MRI on tissue neuronal dysfunction. By extending imaging to the study of composition such as lipids.

Without Apology Shannon Stettner, 2016-08-26 Until the late 1960s, the authorities on abortion were for the most part men—politicians, clergy, lawyers, physicians, all of whom had an interest in regulating women’s bodies. Even today, when we hear women speak publicly about abortion, the voices are usually those of the leaders of women’s and abortion rights organizations, women who hold political office, and, on occasion, female physicians. We also hear quite frequently from spokeswomen for anti-abortion groups. Rarely, however, do we hear the voices of ordinary women—women whose lives have been in some way touched by abortion. Their thoughts typically owe more to human circumstance than to ideology, and without them, we run the risk

of thinking and talking about the issue of abortion only in the abstract. Without Apology seeks to address this issue by gathering the voices of activists, feminists, and scholars as well as abortion providers and clinic support staff alongside the stories of women whose experience with abortion is more personal. With the particular aim of moving beyond the polarizing rhetoric that has characterized the issue of abortion and reproductive justice for so long, Without Apology is an engrossing and arresting account that will promote both reflection and discussion.

Advances in Nuclear Science and Technology Jeffrey Lewins, Martin Becker, 1986-03-01 This volume represents the second of our occasional departures from the format of an annual review series, being devoted to one coherent topic. We have the pleasure therefore in presenting a concerted sequence of articles on the use of Simulators for Nuclear Power. An essential attribute of a quantified engineer in any discipline is to be able to model and predict, i.e. to analyze, the behaviour of the subject under scrutiny. Simulation goes, one would argue, a step further. The engineer providing a simulator takes a broader view of the system studied and makes the analysis available to a wider audience. Hence simulation may have a part to play in design but also in operation, in accident studies and also in training. It leads to synthesis as well as analysis. There is no doubt that the massive scale and the economic investment implied in nuclear power programmes demands an increased infra-structure in licensing and training as well as in design and operation. The simulator is a cheap alter native - admittedly cheap only in relative terms - but also perhaps an essential method of providing realistic experience with negligible or at least small risk. Nuclear power therefore has led to a wide range of simulators. At the same time we would not overlook the substantial role played by simulators in say the

aero-industry; indeed the ergonomic and psychological studies associated with that industry hold many lessons.

Migrating Texts Marilyn Booth, 2019-05-03 Explores translation in the context of the multi-lingual, multi-ethnic late-Ottoman Mediterranean world. Fénelon, Offenbach and the Iliad in Arabic, Robinson Crusoe in Turkish, the Bible in Greek-alphabet Turkish, excoriated French novels circulating through the Ottoman Empire in Greek, Arabic and Turkish: literary translation at the eastern end of the Mediterranean offered worldly vistas and new, hybrid genres to emerging literate audiences in the nineteenth and early-twentieth centuries. Whether to propagate 'national' language reform, circulate the Bible, help audiences understand European opera, argue for girls' education, institute pan-Islamic conversations, introduce political concepts, share the Persian Gulistan with Anglophone readers in Bengal, or provide racy fiction to schooled adolescents in Cairo and Istanbul, translation was an essential tool. But as these essays show, translators were inventors, and their efforts might yield surprising results.

Encyclopedia of Materials Characterization Charles A. Evans, 1992 This is a comprehensive volume on analytical techniques used in materials science for the characterization of surfaces, interfaces and thin films. This flagship volume is a unique, stand-alone reference for materials science practitioners, process engineers, students and anyone with a need to know about the capabilities available in materials analysis. An encyclopedia of 50 concise articles, this book will also be a practical companion to the forthcoming books in the series.--

Surface Contamination K. L. Mittal, 2012-12-06 The present volume and its companion Volume 2 document the proceedings of the Symposium on Surface Contamination: Its Genesis, Detection and Control held in Washington, D.C., September 10-13, 1978. This Symposium was a part of the 4th International Symposium on Contamination Control held under the auspices of the International Committee of Contamination Control Societies, and the Institute of Environmental Sciences (U.S.A.) was the official host. The ubiquitous nature of surface contamination causes concern to everyone dealing with surfaces, and the world of surfaces is wide and open-ended. The technological areas where surface cleaning is of cardinal importance are too many and very diversified. To people working in areas such as adhesion, composites, adsorption, friction, lubrication, soldering, device fabrication, printed circuit boards, etc., surface contamination has always been a *bête noire*. In short, people dealing with surfaces are afflicted with molysmophobia, and rightfully so. In the past, the subject of surface contamination had been discussed in various meetings, but this symposium was hailed as the most comprehensive symposium ever held on this important topic, as the technical program comprised 70 papers by more than 100 authors from 10 countries. The symposium was truly international in scope and spirit and was very well attended. The attendees represented a broad spectrum of backgrounds, interests, and professional affiliations, but all had a common interest and concern about surface contamination and cleaning.

In the Absence of the Sacred Jerry Mander, 1991 Mander goes beyond television (which he proclaimed as being dangerous to personal health and sanity in *Four Arguments for the Elimination of Television*) to critique our technological society as a whole, challenge its utopian promises, and track its devastating impact on native cultures worldwide. Will interest all readers concerned about our environment and quality of life.-- Publishers

Ore Microscopy James R. Craig, David J.

Vaughan, 1981-06-04 Provides an up-to-date introduction to the subject of ore microscopy, emphasizing the basic skills required for the study of opaque minerals in polished sections. Describes the modern ore microscope, the preparation of polished and polished-thin sections of opaque minerals and ores, and the identification of these minerals using both qualitative techniques and the quantitative methods of reflectance and microhardness measurement. Later sections discuss the interpretation of textural intergrowths of ore minerals and the determination of their paragenesis, along with the examination of coexisting minerals for determining their physio-chemical conditions of formation. Appendices contain the data necessary to identify approximately 100 of the more common ore minerals and those frequently encountered by the professional scientist.

Number Theory 1 Kazuya Kato, Nobushige

Kurokawa, Takeshi Saitō, 2000 This is the English translation of the original Japanese book. In this volume, Fermat's Dream, core theories in modern number theory are introduced. Developments are given in elliptic curves, p -adic numbers, the ζ -function, and the number fields. This work presents an elegant perspective on the wonder of numbers. Number Theory 2 on class field theory, and Number Theory 3 on Iwasawa theory and the theory of modular forms, are forthcoming in the series.

Powderburns Celerino Castillo, Dave Harmon, 1994 The truth about the remaining dark secret of the Iran-Contra scandal- the United States government's collaboration with drug smugglers. Powderburns is the story of Celerino Castillo III who spent 12 years in the Drug Enforcement Administration. During that time, he built cases against organized drug rings in Manhattan, raided jungle cocaine labs in the Amazon, conducted aerial eradication operations in Guatemala, and assembled and trained anti-narcotics units in several countries. The eerie climax of Agent

Castillo's career with the DEA took place in El Salvador. One day, he received a cable from a fellow agent. He was told to investigate possible drug smuggling by Nicaraguan Contras operating from the El Pango air force base. Castillo quickly discovered that Contra pilots were, indeed, smuggling narcotics back into the United States - using the same pilots, planes, and hangars that the Central Intelligence Agency and the National Security Council, under the Direction of Lt. Col. Oliver North, used to maintain their covert supply operation to the Contras.

Wetlands of Bottomland Hardwood Forests J.R. Clark, J. Benforado, 2012-12-02 These Proceedings comprise two parts. Part I contains eight contributed papers on hydrology, fauna, soils, forests, agriculture and ecology. Part II comprises reports resulting from the five interdisciplinary workgroups whose participants included ecologists, botanists, zoologists, engineers, hydrologists, agrologists, dendrologists, resource managers and other specialists. Their aim was to evaluate conservation and management practices for wetland portions of the bottomland forests of the southeastern United States and to provide technical advice to responsible federal agencies. Thus the book is a state-of-knowledge review of scientific literature and current research, particularly that necessary to understand the effects of alterations such as forest clearing, land drainage or levee building that impair natural functions, i.e. production of timber, maintenance of water quality, flood water storage, support of migrating waterfowl and fish, carbon dioxide balance of the atmosphere etc.

The Ottoman Empire and Early Modern Europe Daniel Goffman, 2002-04-25 Despite the fact that its capital city and over one third of its territory was within the continent of Europe, the Ottoman Empire has consistently been regarded as a place apart, inextricably divided from the West by differences of culture and religion. A perception of its militarism, its barbarism, its tyranny, the sexual appetites of its rulers and its pervasive exoticism has

led historians to measure the Ottoman world against a western standard and find it lacking. In recent decades, a dynamic and convincing scholarship has emerged that seeks to comprehend and, in the process, to de-exoticize this enduring realm. Dan Goffman provides a thorough introduction to the history and institutions of the Ottoman Empire from this new standpoint, and presents a claim for its inclusion in Europe. His lucid and engaging book - an important addition to New Approaches to European History - will be essential reading for undergraduates.

Introduction to Surface and Thin Film Processes John Venables, 2000-08-31 This book covers the experimental and theoretical understanding of surface and thin film processes. It presents a unique description of surface processes in adsorption and crystal growth, including bonding in metals and semiconductors. Emphasis is placed on the strong link between science and technology in the description of, and research for, new devices based on thin film and surface science. Practical experimental design, sample preparation and analytical techniques are covered, including detailed discussions of Auger electron spectroscopy and microscopy. Thermodynamic and kinetic models of structure are emphasised throughout. The book provides extensive leads into practical and research literature, as well as resources on the World Wide Web (see <http://venables.asu.edu/book>). Each chapter contains problems which aim to develop awareness of the subject and the methods used. Aimed as a graduate textbook, this book will also be useful as a sourcebook for graduate students, researchers and practitioners in physics, chemistry, materials science and engineering.
