Painting with Light Jan Leonardo Woellert,Joerg Miedza,2011 Master the skills you need to transform everyday scenes into breathtaking works of art Throw your preconceptions about light-painting out the window and prepare for a creative journey that will revolutionize your photography. Light painting is a classic photography technique that involves selectively illuminating sections of a dark subject by moving a light source (like a flashlight) over the subject during the course of a seconds- or minutes-long exposure. This results in uniquely nuanced depictions with a high level of technical artistry. As Eric Curry shows, however, today's hardware and software allow you to produce light-painting images that are anything but traditional! In this book, you'll learn, step by step, how to plan and execute incredible, nuanced images using simple gear, a whole lot of imagination, and today's powerful postproduction software. With these techniques, your imagination is the only limit to what you can create! AUTHOR: Eric Curry earned a BA in photography from the Art Center College of Design in 1980, then moved to Copenhagen, Denmark, where he ran his own advertising photography studio for over ten years. There, he worked with the largest agencies in the country, shooting brands such as Novo, Bang and Olufson, Pfizer, Maersk Line Shipping, LEGO, and Philips Electronics.Upon returning to the U.S. in 1992, Eric gradually transitioned to location industrial photography, because it afforded, as he comments, a much broader palette of avenues for creativity. After thirty years of shooting as a professional, and an additional five years working on the series American Pride and Passion, Eric is now sharing the secrets of how some of his most effective shots were made--and how you can make similarly powerful photographs yourself.Currently, Eric creates photographs exclusively on location for select clients and himself, taking full advantage of the depth and possibilities afforded by each and every new challenge. SELLING POINTS: * Learn to choose the best light sources for the shape and texture of the surface you're lighting -- and for the effect you want to create * Devise a detailed plan for lighting each frame and maximize your post-production finishing options * Determine the optimal exposure settings for the scene and light sources you've chosen

Extracting Spatial Information from Historical Maps Benedikt Budig, 2018-11-23 Historical maps are fascinating documents and a valuable source of information for scientists of various disciplines. Many of these maps are available as scanned bitmap images, but in order to make them searchable in useful ways, a structured representation of the contained information is desirable. This book deals with the extraction of spatial information from historical maps. This cannot be expected to be solved fully automatically (since it involves difficult semantics), but is also too tedious to be done manually at scale. The methodology used in this book combines the strengths of both computers and humans: it describes efficient algorithms to largely automate information extraction tasks and pairs these algorithms with smart user interactions to handle what is not understood by the algorithm. The effectiveness of this approach is shown for various kinds of spatial documents from the 16th to the early 20th century.

The City at Eye Level Meredith Glaser, 2012 Although rarely explored in academic literature, most inhabitants and visitors interact with an urban landscape on a day-to-day basis is on the street level. Storefronts, first floor apartments, and sidewalks are the most immediate and common experience of a city. These plinths are the ground floors that negotiate between inside and outside, the public and private spheres. The City at Eye Level qualitatively evaluates plinths by exploring specific examples from all over the world. Over twenty-five experts investigate the design, land use, and road and foot traffic in rigorously researched essays, case studies, and interviews. These pieces are supplemented by over two hundred beautiful color images and engage not only with issues in design, but also the concerns of urban communities. The editors have put together a comprehensive guide for anyone concerned with improving or building plinths, including planners, building owners, property and shop managers, designers, and architects.

How to Lie with Maps Mark Monmonier, 2014-12-10 Originally published to wide acclaim, this lively, cleverly illustrated essay on the use and abuse of maps teaches us how to evaluate maps critically and promotes a healthy skepticism about these easy-to-manipulate models of reality. Monmonier shows that, despite their immense value, maps lie. In fact, they must. The second edition is updated with the addition of two new chapters, 10 color plates, and a new foreword by renowned geographer H. J. de Blij. One new chapter examines the role of national interest and cultural values in national mapping organizations, including the United States Geological Survey, while the other explores the new breed of multimedia, computer-based maps. To show how maps distort, Monmonier introduces basic principles of mapmaking, gives entertaining examples of the misuse of maps in situations from zoning disputes to census reports, and covers all the typical kinds of distortions from deliberate oversimplifications to the misleading use of color. Professor Monmonier himself knows how to gain our attention; it is not in fact the lies in maps but their truth, if always approximate and incomplete, that he wants us to admire and use, even to draw for ourselves on the facile screen. His is an artful and funny book, which like any good map, packs plenty in little space.—Scientific American A useful guide to a subject most people probably take too much for granted. It shows how map makers translate abstract data into eye-catching cartograms, as they are called. It combats cartographic illiteracy. It fights cartophobia. It may even teach you to find your way. For that alone, it seems worthwhile.—Christopher Lehmann-Haupt, The New York Times . . . witty examination of how and why maps lie. [The book] conveys an important message about how statistics of any kind can be manipulated. But it also communicates much of the challenge, aesthetic appeal, and sheer fun of maps. Even those who hated geography in grammar school might well find a new enthusiasm for the subject after reading Monmonier's lively and surprising book.—Wilson Library Bulletin A reading of this book will leave you much better defended against cheap atlases, shoddy journalism, unscrupulous advertisers, predatory special-interest groups, and others who may use or abuse maps at your expense.—John Van Pelt, Christian Science Monitor Monmonier meets his goal admirably. . . . [His] book should be put on every map user's 'must read' list. It is informative and readable . . . a big step forward in helping us to understand how maps can mislead their readers.—Jeffrey S. Murray, Canadian Geographic

In Praise of Copying Marcus Boon, 2010 This book is devoted to a deceptively simple but original argument: that copying is an essential part of being human, that the ability to copy is worthy of celebration, and that, without recognizing how integral copying is to being human, we cannot understand

ourselves or the world we live in. In spite of the laws, stigmas, and anxieties attached to it, the word “copying” permeates contemporary culture, shaping discourse on issues from hip hop to digitization to gender reassignment, and is particularly crucial in legal debates concerning intellectual property and copyright. Yet as a philosophical concept, copying remains poorly understood. Working comparatively across cultures and times, Marcus Boon undertakes an examination of what this word means—historically, culturally, philosophically—and why it fills us with fear and fascination. He argues that the dominant legal-political structures that define copying today obscure much broader processes of imitation that have constituted human communities for ages and continue to shape various subcultures today. Drawing on contemporary art, music and film, the history of aesthetics, critical theory, and Buddhist philosophy and practice, In Praise of Copying seeks to show how and why copying works, what the sources of its power are, and the political stakes of renegotiating the way we value copying in the age of globalization.
