Hidden Treasures Gene Levine, Gary W. Priester, 2008 A stereogram is a two-dimensional image that, when viewed properly, creates a stunning, almost magical impression of depth. Objects seem to float or to pop out of patterns. And these complex and sophisticated designs, produced by two of the most famous stereogram creators in the world, are state of the art.

Just Enough Software Architecture George Fairbanks, 2010-08-30 This is a practical guide for software developers, and different than other software architecture books. Here's why: It teaches risk-driven architecting. There is no need for meticulous designs when risks are small, nor any excuse for sloppy designs when risks threaten your success. This book describes a way to do just enough architecture. It avoids the one-size-fits-all process tar pit with advice on how to tune your design effort based on the risks you face. It democratizes architecture. This book seeks to make architecture relevant to all software developers. Developers need to understand how to use constraints as guiderails that ensure desired outcomes, and how seemingly small changes can affect a system's properties. It cultivates declarative knowledge. There is a difference between being able to hit a ball and knowing why you are able to hit it, what psychologists refer to as procedural knowledge versus declarative knowledge. This book will make you more aware of what you have been doing and provide names for the concepts. It emphasizes the engineering. This book focuses on the technical parts of software development and what developers do to ensure the system works not job titles or processes. It shows you how to build models and analyze architectures so that you can make principled design tradeoffs. It describes the techniques software designers use to reason about medium to large sized problems and points out where you can learn specialized techniques in more detail. It provides practical advice. Software design decisions influence the architecture and vice versa. The approach

in this book embraces drill-down/pop-up behavior by describing models that have various levels of abstraction, from architecture to data structure design.

A Compendium of Miniature Orchid Species Ron Parsons, Mary E. Gerritsen, 2013 Orchids represent probably the largest of all flowering plant families on Earth and are renowned the world over for their exquisite flowers. Their remarkable blooms occur in all manner of size and shape, and orchid flowers range from some of the smallest and most diminutive in the plant kingdom to some of the largest and most flamboyant. Historically, the most popular orchids in cultivation have been those with large, showy flowers, however a significant proportion of known orchid species are far smaller. Within this group lie the true jewels of the orchid family, the miniature orchid species, which can produce some of the most unusual and often spectacular flowers of all. This two volume work, *A Compendium of Miniature Orchid Species*, presents a richly illustrated insight into the very finest epiphytic and lithophytic miniature orchids currently in cultivation, focusing not only on those species with remarkable flowers, but also the many species that are grown for their striking leaf and plant forms. Produced with both novices and experts in mind, this exhaustive and accessibly written work features individual entries for over 500 different species across more than 120 genera. Each species entry includes nomenclatural and etymological information, as well as cultivation guidance and notes about habitat, conservation status and similarities to other orchids. The species entries also incorporate newly published taxonomic data that is also reflected in the extensive cross-index of orchid names and synonyms, and all species are generously represented with numerous photographs, including images of other species with which they are easily confused.

Stereograms R. Clarke, 2016-11-09 Stereograms are sometimes referred to as Magic Eye Pictures and have a hidden 3D picture inside. This stereogram book has 30 stereograms (29 inside and 1 on the front cover) To see the hidden 3D picture in each stereogram, hold the stereogram about 15cm from your face. Then try to stare through the picture, which will make your eyesight go blurry. Eventually, a blurry hidden 3D picture will start to come into focus. Maintain your gaze and the 3D picture will soon become clearer, sharper and you will be able to look around the 3D picture without it disappearing. Please note that everybody is different and it may take some people a few seconds to see the 3D hidden picture, whilst others may take a few minutes or not at all. If you cannot see any hidden 3D pictures in the stereograms, try altering the distance by slowly moving your head back and forth. TO AVOID DISAPPOINTMENT, PLEASE TRY THE STEREOGRAM ON THE FRONT COVER.

New Nepenthes Stewart McPherson, 2011 Never have so many new tropical pitcher plants (Nepenthes) been discovered as during the three years since the publication of the first complete monograph of the genus in 2009. Among them are eighteen new species, two revised species, one new variety, and two new but

incompletely diagnosed taxa from across Borneo, Indochina, New Guinea, the Philippines and Sulawesi. The newly discovered plants include many of largest, most extraordinary and colourful carnivorous plants ever found. This work documents all of the new Nepenthes, in many cases for the very first time.
