New Concepts in Innovation Output Measurement Donald Bain,A. Kleinknecht,2016-07-27 This collection of papers describes advances in the measurement of innovation output, principally through the use of a new technique based on scanning of trade and technical journals. Experience in several countries is assessed and the strength and weaknesses of the technique discussed. The conclusion is that, taken together with recent advances in the design of questionnaires for postal surveys of innovation, this technique provides a radically improved data source for testing innovation theories and for effective policy analysis.

National Innovation, Indicators and Policy L. Earl,2006-01-01 This book takes stock of what is known about the process of innovation and its effects, and the policy interventions that influence both. It provides insights into future research required to support evidence-based policy-making and makes clear the need to take a systems approach to the analysis of innovation, its outcomes and its impacts. The contributors explore the fact that economic theory, statistical measurement and the need to achieve targets are combining to shift policy focus towards the economic and social impacts of innovation. This is forcing economists and statisticians to look for new measures, indicators, and analytical frameworks to support the public policy debate and the implementations of change necessary for success. The book emphasizes the importance of linkages and communities of practice in measuring and analyzing innovation, and focuses on: the importance of social sciences as well as natural sciences to the activity of innovation. policy-relevant discussions on the measurement gaps in the activity of innovation quantitative results of analysis relating to the output of innovation activities theoretical frameworks and concepts for measurement of the activity of innovation suggestions for new measurement directions for the activity of innovation which will lead into an international forum to discuss indicator development at the OECD over the next decade. Illustrating that the expectations of innovation policies are being raised, this book will prove fascinating reading for policy analysts, economists, academics and students with an interest in innovation, industrial dynamics and science and technology.

James Harrington and Frank Voehl have gathered together the thoughts and ideas of more than 20 of the most creative innovation thought leaders from business, professional practice, and academia in this compelling book. The thought leaders look at innovation from almost every angle - their statements offer an unparalleled view of innovation and provide a depth of insight that is extraordinary. Harrington and Voehl's reflection on each chapter, and on the sections within the book, provides useful links between themes and reinforces the relationships between many of the ideas. Anyone interested in innovation (practitioner or researcher) will benefit from this global thought collection. The contributors' multiple perspectives, models, practical examples, and stories provide a sense of innovation that no single writer could ever capture. A company's future growth will only come through successful innovation. This book is organized around Dr. Harrington's innovation pyramid, which consists of the 16 building blocks required to bring about significant improvements in an organization's ability to deliver creative products. It highlights the principles and recommendations in ISO's new innovation standard 56002 and provides many new concepts that are not included in the standard. Innovation Scorecard Ondrej Zizlavsky,Eddie Fisher,2021-12-02 The concept of innovation is not new. It relates closely to the concept of change. Both are inevitable in today's and tomorrow's business environments. Standing still and hoping for the best is no longer a viable option. Innovation, by itself, is not a panacea for positive accomplishments. Of paramount importance to any business is how successful any innovation has actually been. This book brings together the knowledge, learning and experience from the author's practical applications of a newly developed and implemented Innovation Scorecard methodology to close exactly this shortfall. Their 'one stop shop' methodology is a complete end to end approach on how to measure the success of any innovation, irrespective of whether this relates to projects or business as usual work environments. This landmark methodology will provide the reader with an applied proof of concept across a range of business applications and a complete end to end process how to measure success including templates and worked examples. The book offers a starter-pack with suggested performance metrics to get the reader on the road to measuring the success of innovation and to encourage readers to develop how they view and feel about measuring the success of innovation. Furthermore, the book provides the reader with everything they need to know, ranging from a simple to follow user-friendly process to the application of suggested performance metrics and how to apply these in any business work environment, which is a requisite for creating a working environment within the reader's organisation where innovation and forward-thinking are both encouraged and supported.

Knowledge Management in the Innovation Process John de la Mothe,Dominique Foray,2001-08-31 It is now widely recognized that many of the central unresolved problems in economic policy, management and research turn on questions of knowledge. Increasingly, complex firms and agencies must ask, and answer, such difficult questions as: What is knowledge? Where is it? Who has it? Does the organization lose or gain competitive advantage or effectiveness by sharing knowledge? Where can we find the knowledge we need? How can we measure knowledge? In a knowledge-based economy, these queries are integral to the pursuits of every policy maker, analyst and strategist. Knowledge Management in The Innovation Process - a joint project between Statistics Canada and Program of Research on Innovation Management and Economy (PRIME) at the University of Ottawa - brings together economic, social, measurement and policy views on these critical issues. This project fits into an ongoing research program at Statistics Canada to develop meaningful indicators for science, technology and innovation in a technology-intensive economy. It also fits into the ongoing program at PRIME to better understand technology policy and innovation strategy. This book tells the story of the dynamic interplay between knowledge and innovation with an eye to developing tools and frameworks for managing knowledge for social and economic benefit.

The resulting indicators can be used to inform policy development, and offer a better understanding of the impact of the innovation policy of governments, the strategy of businesses and the practice of households, in a more digital economy. Innovation is a systems phenomenon and systems provide a structure throughout the book.
