Photographic Atlas of Entomology and Guide to Insect Identification James L. Castner,2000 Although photo atlases in other fields of the life sciences have long been available to aid students in their studies, there has never been one for entomology. One reason for this is the great number of photos necessary for such a book to be of any value. Fortunately for students, Dr. Castner has spent the past 25 years photographing insects with his work appearing in everything from National Geographic to Ranger Rick. Dr. Castner's experience in teaching and working with students has allowed him to produce a work that exactly addresses their needs. His Photographic Atlas of Entomology is simple, thorough, user-friendly, and very reasonably priced. It should be a great help to any entomology student, as well as to the professors teaching entomology courses.

Every insect has characteristic feeding preferences and behaviours. *Insects of South-Eastern Australia* is a unique field guide that uses host plants and behavioural attributes as the starting point for identifying insects. Richly illustrated with colour photographs, the different species of insects found in Australia's temperate south-east, including plant feeders, predators, parasites and decomposers, are presented. The guide is complemented by an introduction to the insects of the region, including their environment, classification, life history, feeding strategies and behaviour. Fascinating boxes on camouflage, mimicry and many other topics are also included throughout. Whether you are a field naturalist, entomologist or just want to know what's in your

Insects of Texas: a Practical Guide David Hugh Kattes,2009 This practical, non-technical introduction to insect classification offers a well-illustrated, straight-forward primer in entomology. Whether you are part of a master naturalist program, are interested in environmentally friendly pest management, or simply enjoy knowing what to call that strange-looking bug on your back porch, *Insects of Texas* will be your first resource for insect classification and identification. This book will help you sort out many of the millions of insect species by learning the readily distinguishable field characteristics needed to identify groups most commonly seen in Texas. David H. Kattes provides short tutorials on morphology and metamorphosis and uses a simple color-coding scheme to present the five classes of arthropods and the orders, suborders, and families of insects most relevant to Texas observers. Photo keys, pronunciation guides, illustrated tables, abundant photographs, and highlighted accounts of physical and biological characteristics help introduce readers to the various tiny creatures that inhabit our world, steering them through arachnids, crustaceans, millipedes, centipedes, and hexapods. Within each account, Kattes comments on habits and other interesting information, reflecting his long experience in teaching and speaking to a variety of receptive audiences.
