Protecting Our Environment Janet R. Hunter,Zachary A. Smith,2012-02-01 Significant changes in how the world approaches global environmental problems have occurred since the late 1970s. Countries have become increasingly aware of the borderless nature of environmental issues, i.e., that production and consumption in one country can spill over to affect another country's environment. Protecting Our Environment considers the successes that have been achieved in the European Union (EU), as well as issues the Union still faces regarding the protection of the environment in the future. Authors Janet R. Hunter and Zachary A. Smith identify the factors that have allowed the EU to form a successful environmental regime, including the development of the environmental management approach and the principles upon which it is based. They examine in detail the challenges that have been encountered in the implementation of environmental programs, and the solutions that have been developed to address those challenges. Also considered is how economic development and environmental protection have been reconciled within the EU. By analyzing the successful example of the EU, Protecting Our Environment provides a model for a contemporary approach to global environmental problems.

International Structural Steel Sections Boris Androic,Ivica Dzeba,Darko Dujmovic,2000-05-31 For some years now, steel construction has no longer been the reserve of specialists. To take advantage of all the possibilities offered by the modern steel industry in terms of a good fit of shape and material, the first rough design plays an important part in planning any structure. Tender or offer specifications based on Eurocode 3 will hopefully open the way to competitiveness using the international reasonable steel market. This book contains a short annotation about steel grades and qualities, followed by a basic introduction to the European safety concept, 104 tables for all European rolled sections, a selection of British and American sections, hot-rolled and cold-formed hollow sections as well as tables giving data on dimensions, properties and classification, design resistance, design buckling resistance and design lateral torsional buckling resistance moment under two different load conditions, based on the European buckling curves. These tables allow preliminary design, profile selection or a quick safety check of various structural members, so as to avoid time-consuming computer analysis, or to check the plausibility of results so obtained.
