📖 **MANAGEMENT ENABLING THE FUTURE INTERNET FOR CHANGING BUSINESS AND NEW COMPUTING SERVICES** CHOONG SEON HONG,TOSHIO TONOUCI,YAN MA,CHI-SHIH CHAO,2009-09-19 We are delighted to present the proceedings of the 12th Asia-Pacific Network Operations and Management Symposium (APNOMS 2009), which was held in Jeju, Korea, during September 23-25, 2009. Recently, various convergences in wired and wireless networks, and convergence of telecommunications and broadcastings, are taking place for ubiquitous multimedia service provisioning. For example, broadband IP/MPLS wired networks are actively converged with IEEE 802.11e wireless LAN, IEEE 802.16 wireless MAN, 3G/4G wireless cellular networks, and direct multimedia broadcast (DMB) networks. For efficient support of service provisioning for ubiquitous multimedia services on the broadband convergencenetworks, well-designed and implemented network operations and management functions with QoS-guaranteed traffic engineering are essential. The converged network will open the way for a new world with emerging new businesses and computing services. The Organizing Committee (OC) selected “Management Enabling the Future Internet for Changing Business and New Computing Services” as the timely theme of APNOMS 2009. Contributions from academia, industry and research institutions met these challengeswith 173papersubmissions,fromwhich41high-qualitypapers(23.7% of the submissions) were selected for technical sessions as full papers, and 32 papers were selected as short papers. In addition, we had nine papers in innovation sessions for on-going research. Diverse topics were covered, including Traffic Trace Engineering, Configuration and Fault Management, Management of IP-Based Networks, Autonomous and Distributed Control, Sensor Network and P2P Management, Converged Networks and Traffic Engineering, SLA and QoS Management, Active and Security Management, Wireless and Mobile Network Management, and Security Management.

📖 **MODELLING AUTONOMIC COMMUNICATIONS ENVIRONMENTS** JOHN C. STRASSNER,YACINE M. GHAMRI-DOUDANE,2009-10-21 Research and development of autonomies have come a long way, and we are delighted to present the proceedings of the 4th IEEE International Workshop on Modeling Autonomic Communications Environments (MACE 2009). As in the last three years, this workshop was held as part of ManWeek, the International Week on Management of Networks and Services, which took place in the culturally rich city of Venice in Italy. ManWeek is now an umbrella of five workshops and conferences focusing on different aspects of network and service management, including MACE, distributed operations and management (DSOM), network-basedmanagement(IPOM),towardsmultimediaandmobilenetworks(MMNS), and virtualization and middleware for next generation networks (NGNM). Further information of ManWeek and the individual workshops and conferences can be found atHTTP://www.manweek.org. MACE started as an experiment, in 2006, and created a small community that now finds itself attracted back each year by a feeling of excitement and anticipation to share new advances and development. Certainly, MACE is not as shiny or practiced as other well-known conferences and workshops, but we consider this a feature of the workshop itself. New ideas, a little rough around the edges (andsometimesmorethanalittle),oftenquiteunpolished, pop out and provoke extensive discussion. Science needs this kind of exploratory adventure, and we have been strongly motivated to continue preserving this atmosphere of exploration and discussion in this year’s technical program.

The book will be a valuable resource for academics, students and practitioners working in the areas of international private law, electronic commerce law and consumer law.

📖 **FLEXIBLE NETWORK ARCHITECTURES SECURITY** BHAWANA RUDRA,2018-05-01 The future of Internet security doesn’t lie in doing more of the same. It requires not only a new architecture, but the means of securing that architecture. Two trends have come together to make the topic of this book of vital interest. First, the explosive growth of the Internet connections for the exchange of information via networks increased the dependence of both organizations and individuals on the systems stored and communicated. This, in turn, has increased the awareness for the need to protect the data and add security as chief ingredient in the newly emerged architectures. Second, the disciplines of cryptography and network security have matured and are leading to the development of new techniques and protocols to enforce the network security in future Internet. This book examines the new security architectures from organizations such as FIArch, GENI, and IETF and
