research comprises a diverse set of subjects and methodologies and this book is no exception - offering the reader only a small glimpse into the physical and social processes that threaten human interests. *Atmospheric Hazards-Case Studies in Modeling, Communication, and Societal Impacts* explores atmospheric-based hazards through focused investigations ranging from a local to global perspective. Within this short compendium, the major scales of atmospheric motion are well represented with topics on microscale turbulent transport of pollutants, mesoscale events stemming from thunderstorm complexes, and synoptic scale extreme precipitation episodes. Chapters include discussions on modeling aspects for investigating hazards (pollution, regional climate models) and the forecasting and structure of high wind events (derechos), whereas others delve into hazard communication, preparedness, and social vulnerability issues (tornadoes, hurricanes, and lightning). Although the chapters are quite disparate upon first inspection, the topics are united through their interweaving of both the physical and societal mechanisms that create the atmospheric hazard and eventual disaster.

Monsoon as Method Lindsay Bremner, Beth Cullen, Christina Leigh Geros, Harshavardhan Bhat, Anthony Powis, 2022-05-25 An edited volume by *Monsoon Assemblages*, a European Research Council funded research project. The book presents the methods that *Monsoon Assemblages* has evolved for engaging the monsoon, a globally connected weather system, as a coproducer of urban life and space in South and Southeast Asian cities. It challenges views of climate as an inert backdrop to urban life, instead suggesting that it is materially and spatially active in shaping urban politics, ecologies, infrastructures, buildings and bodies. It combines critical texts with cartography, photography and ethnography to present the project's methodology and its outcomes and invites urban practitioners to think differently about space, time, representation and human and non-human agency. It offers intra-disciplinary, intra-active methods for rethinking human and non-human relations with weather in ways that meet the challenges of climate change and the Anthropocene.
