Mobile Information Retrieval Fabio Crestani, Stefano Mizzaro, Ivan Scagnetto, 2017-07-19 This book offers a helpful starting point in the scattered, rich, and complex body of literature on Mobile Information Retrieval (Mobile IR), reviewing more than 200 papers in nine chapters. Highlighting the most interesting and influential contributions that have appeared in recent years, it particularly focuses on both user interaction and techniques for the perception and use of context, which, taken together, shape much of today's research on Mobile IR. The book starts by addressing the differences between IR and Mobile IR, while also reviewing the foundations of Mobile IR research. It then examines the different kinds of documents, users, and information needs that can be found in Mobile IR, and which set it apart from standard IR. Next, it discusses the two important issues of user interfaces and context-awareness. In closing, it covers issues related to the evaluation of Mobile IR applications. Overall, the book offers a valuable tool, helping new and veteran researchers alike to navigate this exciting and highly dynamic area of research.

Paleontological Collections of Germany, Austria and Switzerland

Lothar A. Beck, Ulrich Joger, 2018-11-19 This book is devoted to 250 years of collecting, organizing and preserving paleontological specimens by generations of scientists. Paleontological collections are a huge resource for modern research and should be available for national and international scientists and institutions, as well as prospective public and private customers. These collections are an important part of the scientific enterprise, supporting research, public education, and the documentation of past biodiversity. Much of what we are beginning to understand about our world, we owe to the collection, preservation, and ongoing study of natural specimens. Properly preserved collections of fossil marine or terrestrial plants and animals are archives of Earth's history and vital to our ability to learn about our place in its future. The approach employed by the editors involves not only an introduction to the paleontological collections in general, but also information on the international and national collection networks. Particular attention is given to new exhibition concepts and approaches of sorting, preserving and researching in paleontological collections and also their neglect and/or threat. In addition, the book provides information on all big public museums, on important state museums and regional Museums, and also on university collections. This is a highly informative and carefully presented book, providing scientific insight for readers with an interest in fossil record, biodiversity, taxonomy, or evolution, as well as natural history collections at large.

Animal Traffic Rosemary-Claire Collard, 2020-08-24 Parrots and snakes, wild cats and monkeys---exotic pets can now be found everywhere from skyscraper apartments and fenced suburban backyards to roadside petting zoos. In *Animal Traffic* Rosemary-Claire Collard investigates the multibillion-dollar global exotic pet trade and the largely hidden processes through which exotic pets are produced and traded as lively capital. Tracking the capture of animals in biosphere reserves in Mexico, Guatemala, and Belize; their exchange at exotic animal auctions in the United States; and the attempted rehabilitation of former exotic pets at a wildlife center in Guatemala, Collard shows how exotic pets are fetishized both as commodities and

as objects. Their capture and sale sever their ties to complex socio-ecological networks in ways that make them appear as if they do not have lives of their own. Collard demonstrates that the enclosure of animals in the exotic pet trade is part of a bioeconomic trend in which life is increasingly commodified and objectified under capitalism. Ultimately, she calls for a “wild life” politics in which animals are no longer enclosed, retain their autonomy, and can live for the sake of themselves.

Supernatural beings from Slovenian myth and folktales Monika Kropelj, 2012-01-01

German Medical Data Sciences: Visions and Bridges R. Röhrig, A. Timmer, H. Binder, 2017-09-26 We live in an age characterized by computerized information, but ubiquitous information technology has profoundly changed our healthcare systems and, if not adequately trained to deal with it, healthcare professionals can all too easily be overwhelmed by the complexity and magnitude of the data. This demands new skills from physicians as well as novel ways to provide medical knowledge. Selecting and assessing relevant information presents a challenge which can only be met by bridging the various disciplines in healthcare and the data sciences. This book presents the proceedings of the 62nd annual meeting of the German Association of Medical Informatics, Biometry and Epidemiology (German Medical Data Sciences – GMDS 2017): Visions and Bridges, held in Oldenburg, Germany, in September 2017. The 242 submissions to the conference included 77 full papers, of which 42 were accepted for publication

here after rigorous review. These are divided into 7 sections: teaching and training; epidemiological surveillance, screening and registration; research methods; IT infrastructure for biomedical research/data integration centers; healthcare information systems; interoperability – standards, terminologies, classification; and biomedical informatics, innovative algorithms and signal processing. The book provides a vision for healthcare in the information age, and will be of interest to all those concerned with improving clinical decision making and the effectiveness and efficiency of health systems using data methods and technology.

Myth and Narrative in International Politics Berit Bliesemann de Guevara, 2016-06-13 This book systematically explores how different theoretical concepts of myth can be utilised to interpretively explore contemporary international politics. From the international community to warlords, from participation to effectiveness – international politics is replete with powerful narratives and commonly held beliefs that qualify as myths. Rebutting the understanding of myth-as-lie, this collection of essays unearths the ideological, naturalising, and depoliticising effect of myths. *Myth and Narrative in International Politics: Interpretive Approaches to the Study of IR* offers conceptual and methodological guidance on how to make sense of different myth theories and how to employ them in order to explore the powerful collective imaginations and ambiguities that underpin international politics today. Further, it assembles case studies of specific myths in different fields of International Relations, including warfare, global governance, interventionism, development aid, and statebuilding. The findings challenge conventional assumptions in International Relations, encouraging academics in IR and across a range of different fields and disciplines, including

development studies, global governance studies, strategic and military studies, intervention and statebuilding studies, and peace and conflict studies, to rethink ideas that are widely unquestioned by policy and academic communities.

The Literariness of Media Art Claudia Benthien, Jordis Lau, Maraike M. Marxsen, 2018-09-14 The beginning of the 20th century saw literary scholars from Russia positing a new definition for the nature of literature. Within the framework of Russian Formalism, the term 'literariness' was coined. The driving force behind this theoretical inquiry was the desire to identify literature--and art in general--as a way of revitalizing human perception, which had been numbed by the automatization of everyday life. The transformative power of 'literariness' is made manifest in many media artworks by renowned artists such as Chantal Akerman, Mona Hatoum, Gary Hill, Jenny Holzer, William Kentridge, Nalini Malani, Bruce Nauman, Martha Rosler, and Lawrence Weiner. The authors use literariness as a tool to analyze the aesthetics of spoken or written language within experimental film, video performance, moving image installations, and other media-based art forms. This volume uses as its foundation the Russian Formalist school of literary theory, with the goal of extending these theories to include contemporary concepts in film and media studies, such as Neoformalism, intermediality, remediation, and

postdrama.

Witchcraft Accusations from Central India Helen

Macdonald, 2020-11-22 This book unravels the institutions surrounding witchcraft in the central Indian state of Chhattisgarh through theoretical and empirical research on witchcraft, violence and modernity in contemporary times. The author pieces together 'fragments' of stories gathered utilising ethnographic methods to examine the meanings associated with witches and witchcraft, and how they connect with social relations, gender, notions of agency, law, media and the state. The volume uses the metaphor of the shattered urn to tell the story of the accusations, punishment, rescue and the aftermath of the events of the trial of women accused of being witches. It situates the *ṭonhī* or witch as a key elaborating symbol that orders behaviour to determine who the socially included and excluded are in communities. Through the personal interviews and other ethnographic methods conducted over the course of many years, the author delves into the stories and practices related to witchcraft, its relations with modernity, and the relationship between violence and ideological norms in society. Insightful and detailed, this book will be of great interest to academics and researchers of anthropology, development studies, sociology, history, violence, gender studies, tribal studies and psychology. It will also be useful for readers in both historic and contemporary witchcraft practices as well as policy makers.

Ecotoxicology Michael C. Newman,William H.

Clements,2007-12-13 A unique presentation that unifies the field, this book brings together concepts and information about contaminant effects at all levels of the biological hierarchy. Beginning at the biomolecular level, this book builds progressively toward a discussion of effects to the global biosphere. Emphasizing ecological components

and fundamental paradigms, the authors strike a balance between the presentation of details relevant at each level and the integration of phenomena and processes among levels. A milestone in the field, the book is suitable for graduate courses, as well as a reference for professionals in the field.

Extracting, Mining and Predicting Users' Interests from Social Media Fattane Zarrinkalam, Stefano Faralli, Guangyuan Piao, Ebrahim Bagheri, 2020-11-05 Mining user interests from user behavioral data is critical for many applications. Based on user interests, service providers like advertisers can significantly reduce service delivery costs by offering the most relevant products to their customers. The challenge of accurately and efficiently identifying user interests has been the subject of increasing attention for several years. With the emergence and growing popularity of social media, many users are extensively engaged in social media applications to express their feelings and views about a wide variety of social events/topics as they happen in real time. The abundance of user generated content on social media provides the opportunity to build models that are able to accurately and effectively extract, mine, and predict users' interests with the hopes of enabling more effective user engagement, better quality delivery of appropriate services, and higher user satisfaction. While traditional methods for building user profiles relied on AI-based preference elicitation techniques that could have been considered intrusive and undesirable by the users, more recent advances are focused on a non-intrusive yet accurate way of determining users' interests and preferences. In this monograph, the authors cover five important subjects related to the mining of user interests from social media: (1) the foundations of social user interest modeling, (2) techniques that have been adopted or proposed for mining user

interests, (3) different evaluation methodologies and benchmark datasets, (4) different applications that have been taking advantage of user interest mining from social media platforms, and (5) existing challenges, open research questions, and opportunities for further work. The monograph is a valuable resource for those who have familiarity with social media mining and the basics of information retrieval (IR) techniques.

The Invisible Dragon Dave Hickey, 2012-08-31 The Invisible Dragon made a lot of noise for a little book. When it was originally published in 1993 it was championed by artists for its forceful call for a reconsideration of beauty—and savaged by more theoretically oriented critics who dismissed the very concept of beauty as naive, igniting a debate that has shown no sign of flagging. With this revised and expanded edition, Hickey is back to fan the flames. More manifesto than polite discussion, more call to action than criticism, *The Invisible Dragon* aims squarely at the hyper-institutionalism that, in Hickey's view, denies the real pleasures that draw us to art in the first place. Deploying the artworks of Warhol, Raphael, Caravaggio, and Mapplethorpe and the writings of Ruskin, Shakespeare, Deleuze, and Foucault, Hickey takes on museum culture, arid academicism, sclerotic politics, and more—all in the service of making readers rethink the nature of art. A new introduction provides a context for earlier essays—what Hickey calls his intellectual temper tantrums. A new essay, *American Beauty*, concludes the volume with a historical argument that is a rousing paean to the inherently democratic nature of attention to beauty. Written with a verve that is all too rare in serious criticism, this expanded and refurbished edition of *The Invisible Dragon* will be sure to captivate a new generation of readers, provoking the passionate reactions that are the hallmark of great

criticism.
