John D. Kasarda, Greg Lindsay

Airports, Cities and Regions Sven Conventz, Alain

Thierstein, 2014-08-27 Since the emergence of urban systems, cities have developed in a mutually inter-dependent process of socio-economic dynamics and transportation linkages. In recent years, Airports worldwide have stepped beyond the stage of being pure infrastructure facilities while the complex dynamics that are taking place at and around international airports represent a crucial element in the post-industrial reorganisation of urban and regional systems. Airports are increasingly recognized as general urban activity centres; that is, key assets for cities and regions as economic generators and catalysts of investment in addition to being critical components of efficient city infrastructure. This book brings together contributions from renowned academic scholars and world leading practitioners to discuss insights gained from theory and practice. The first collection of papers reflects upon the general role and future of airports as well as their specific contribution to competitive advantages within a fast changing business and economic landscape. The second group of contributions ask about the role airports play within the innovation process that is inherently centred on generating and sharing

knowledge. The third section of papers investigates the drivers of real estate developments on airport land and in the close vicinity of airports.

Aerotropolis John D. Kasarda, Greg Lindsay, 2011-03-01 This brilliant and eye-opening look at the new phenomenon called the aerotropolis gives us a glimpse of the way we will live in the near future—and the way we will do business too. Not so long ago, airports were built near cities, and roads connected the one to the other. This pattern—the city in the center, the airport on the periphery—shaped life in the twentieth century, from the central city to exurban sprawl. Today, the ubiquity of jet travel, round-the-clock workdays, overnight shipping, and global business networks has turned the pattern inside out. Soon the airport will be at the center and the city will be built around it, the better to keep workers, suppliers, executives, and goods in touch with the global market. This is the aerotropolis: a combination of giant airport, planned city, shipping facility, and business hub. The aerotropolis approach to urban living is now reshaping life in Seoul and Amsterdam, in China and India, in Dallas and Washington, D.C. The aerotropolis is the frontier of the next phase of globalization, whether we like it or not. John D. Kasarda defined the term

aerotropolis, and he is now sought after worldwide as an adviser. Working with Kasarda's ideas and research, the gifted journalist Greg Lindsay gives us a vivid, at times disquieting look at these instant cities in the making, the challenges they present to our environment and our usual ways of life, and the opportunities they offer to those who can exploit them creatively. Aerotropolis is news from the near future—news we urgently need if we are to understand the changing world and our place in it.

Planning for Growth Fulong Wu, 2015-01-09 Planning for Growth: Urban and Regional Planning in China provides an overview of the changes in China's planning system, policy, and practices using concrete examples and informative details in language that is accessible enough for the undergraduate but thoroughly grounded in a wealth of research and academic experience to support academics. It is the first accessible text on changing urban and regional planning in China under the process of transition from a centrally planned socialist economy to an emerging market in the world. Fulong Wu, a leading authority on Chinese cities and urban and regional planning, sets up the historical framework of planning in China including its foundation based on the proactive approach to economic growth, the new

forms of planning, such as the ‘strategic spatial plan’ and ‘urban cluster plans’, that have emerged and stimulated rapid urban expansion and transformed compact Chinese cities into dispersed metropolises. And goes on to explain the new planning practices that began to pay attention to eco-cities, new towns and new development areas. Planning for Growth: Urban and Regional Planning in China demonstrates that planning is not necessarily an ‘enemy of growth’ and plays an important role in Chinese urbanization and economic growth. On the other hand, it also shows planning’s limitations in achieving a more sustainable and just urban future.

Chinese Economic History Since 1949 Michael

Dillon, 2017-06-01 Key Papers in Chinese Economic History since 1949 offers a selection of outstanding articles that trace the origins of the modern Chinese economy. Topics covered include agriculture and the rural economy; industrialisation and urbanisation; finance and capital; political economy and international connections.

The Economics of International Airline Transport ,2014-07-09

The Economics of International Airline Transport provides a complete analysis of the economics of international air

transportation by presenting research on the costs borne by air transportation companies due to pollution regulation in Europe, Australia and New Zealand.
