Internet Television Eli M. Noam, Jo Groebel, Darcy Gerbarg, 2003-09-12 Internet TV is the quintessential digital convergence medium, linking television, telecommunications, the Internet, computer applications, games, and more. Soon, venturing beyond the convenience of viewer choice and control, Internet TV will enable and encourage new types of entertainment, education, and games that take advantage of the Internet's interactive capabilities. What Internet TV is today and can be in the future forms the context for this book. Arising from collaboration between the Columbia Institute for Tele-Information (CITI) and the European Institute for the Media (EIM), this volume investigates the advent of widely available individual broadband Internet communications and their impact on the development of Internet TV. Editors Eli Noam, Jo Groebel, and Darcy Gerbarg have collected seminal papers by leaders from the U.S. and European media and technology industries that offer a critical look at the impact of interactivity on television content, and address the need for media organizations to create interactive programming in this untapped realm with unclear consumer interest and desires. Each section of the volume fleshes out key issues and concepts of television and the Internet: *Part I, Infrastructure Implications of Internet TV, discusses questions about the required network capacity for various quality grades to deliver individualized broadband to homes. *Part II, Network Business Models and Strategies, addresses the business challenges of making Internet TV a financial success. *Part III, Policy, examines policy issues, including copyright and regulation. *Part IV, Content and Culture, reviews available content, those creating it, and how consumers view Internet TV content. *Part V, Future Impacts, considers future global prospects for Internet TV content creation and distribution. Internet Television is an essential resource for professionals and scholars in new technology and media studies, media policy, telecommunication, broadcasting, and related areas. It is also appropriate for graduate seminars in telecommunications, media and new technologies, and broadcasting and the Internet.

Streaming TV Wil Mara, 2018-08-01 Using the new C3 Framework for Social Studies Standards, Streaming TV in the Global Citizens: Modern Media series explores the topic through the lenses of History, Geography, Civics, and Economics. Text and photos look at the history, basic philosophies, and geography of the growing popularity of streaming TV. As they read, students will develop questions about the text, and use evidence from a variety of sources in order to form conclusions. Data-focused backmatter is included, as well as a bibliography, glossary, and index.

We Now Disrupt This Broadcast Amanda D. Lotz, 2018-04-06 The collision of new technologies, changing business strategies, and innovative storytelling that produced a new golden age of TV. Cable television channels were once the backwater of American television, programming recent and not-so-recent movies and reruns of network shows. Then came *La Femme Nikita*, *OZ*, *The Sopranos*, *Mad Men*, *Game of Thrones*, and *The Walking Dead*. And then, just as "prestige cable" became a category, came *House of Cards* and Netflix, Hulu, Amazon Video, and other Internet distributors of television content. What happened? In *We Now Disrupt This Broadcast*, Amanda Lotz chronicles the collision of new technologies, changing business strategies, and innovative storytelling that produced an era termed "peak TV." Lotz explains that changes in the business of television expanded the creative possibilities of television. She describes the costly infrastructure rebuilding undertaken by cable service providers in the late 1990s and the struggles of cable channels to produce (and pay for) original, scripted programming in order to stand out from the competition. These new programs defied television conventions and made viewers adjust their expectations of what television could be. *La Femme Nikita* offered cable's first antihero, *Mad Men* cost more than advertisers paid, *The Walking Dead* became the first mass cable hit, and *Game of Thrones* was the first global television blockbuster. Internet

streaming didn't kill cable, Lotz tells us. Rather, it revolutionized how we watch television. Cable and network television quickly established their own streaming portals. Meanwhile, cable service providers had quietly transformed themselves into Internet providers, able to profit from both prestige cable and streaming services. Far from being dead, television continues to transform.

Open TV Aymar Jean Christian, 2018-01-09 How the internet transformed television Before HBO's hit show *Insecure*, Issa Rae's comedy about being a nerdy black woman debuted as a YouTube web series *The Misadventures of Awkward Black Girl*, her response to the absence of diverse black characters on the small screen. *Broad City*, a feminist sitcom now on Comedy Central, originated as a web series on YouTube, developed directly out of funny women Ilana Glazer and Abbi Jacobson's real-life friendship. These unconventional stories took advantage of the freedom afforded outside the traditional television system: online. *Open TV* shows how we have left "the network era" far behind and entered the networked era, with the web opening up new possibilities for independent producers, entrepreneurs, and media audiences. Based on interviews with writers, producers, show-runners, and network executives, visits to festivals and award shows, and the experience of producing his own series, Aymar Jean Christian argues that the web brought innovation to television by opening up series development to new producers, fans, and sponsors that had previously been excluded. Online access to distribution provides creative freedom for indie producers, allows for more diverse storytelling from marginalized communities, and introduces new ways of releasing and awarding shows. *Open TV* is essential reading for anyone interested in the changing environment of television and how the internet can inspire alternatives to what's on TV tonight.

Beyond the Box Sharon Marie Ross, 2011-09-23 *Beyond the Box* gives students and couch potatoes alike a better understanding of what it means to watch television in an era of profound technological change. Charts the revolution in television viewing that is currently underway in living rooms across the world Probes how the Internet's development has altered how television is made and consumed Looks at a range of topics and programmes - from voting practices on *American Idol* to online forums for *Buffy the Vampire Slayer* fans Offers a fresh and innovative perspective that focuses on the shift in audience experience and how it has blurred established boundaries

How Television Invented New Media Sheila C. Murphy, 2011-03-17 Now if I just remembered where I put that original TV play device--the universal remote control . . . Television is a global industry, a medium of representation, an architectural component of space, and a nearly universal frame of reference for viewers. Yet it is also an abstraction and an often misunderstood science whose critical influence on the development, history, and diffusion of new media has been both minimized and overlooked. *How Television Invented New Media* adjusts the picture of television culturally while providing a corrective history of new media studies itself. Personal computers, video game systems, even iPods and the Internet built upon and borrowed from television to become viable forms. The

earliest personal computers, disguised as video games using TV sets as monitors, provided a case study for television's key role in the emergence of digital interactive devices. Sheila C. Murphy analyzes how specific technologies emerge and how representations, from South Park to Dr. Horrible's Sing-Along-Blog, mine the history of television just as they converge with new methods of the making and circulation of images. Past and failed attempts to link television to computers and the Web also indicate how services like Hulu or Netflix On-Demand can give rise to a new era for entertainment and program viewing online. In these concrete ways, television's role in new and emerging media is solidified and finally recognized.

Television Everywhere Andrei Jeziarski, 2010 *Television Everywhere* is on the way. It's a generic term for using the internet to get TV to more devices in more places more conveniently - what you want, where you want, when you want it. It's far from a new idea. Plenty of futuristic notions of TV have been promoted in the past, usually by technologists with a shaky understanding of the television business. But this time Hollywood's content ownership combined with new, simple technologies could enable the television industry itself to take the lead and modernize television, while extending its economic life well into the future. More important than delivering TV through the internet is using the internet to retain and expand audiences for the TV we already have. That's what this book is about- why it's a problem worth solving, how to go about solving it, and how today's television industry will benefit from stepping in where cable companies, phone companies, and their technology suppliers are failing miserably. Aimed primarily at Hollywood, this book is for studio, network, and channel executives, producers, show runners, ad agency strategists (digital or otherwise), media buyers, and executives at ratings/measurement companies. We describe how Hollywood can both extend the life of so-called linear television and control the transition to internet-delivered TV, while building upon existing starter digital assets such as Hulu, or channel- and program-specific web properties and applications. Finally, this book is also a wake-up call to internet content and technology companies to take a fresh look at an old problem, using a comparatively new, low-cost set of approaches produced by the Web 2.0 and cloud computing waves which emerged over the last several years.

Portals Amanda D. Lotz, 2017 Television audiences and its industry alike have been confused by the emergence of new ways to watch television. On one hand, the programs seem every bit like the television we've long known, while the way we can watch, what we can watch, and the business models supporting them differ significantly. *Portals: A Treatise on Internet-Distributed Television* pushes understandings of the business of television to keep pace with the considerable technological change of the last decade. It explains why shows such as *Orange Is the New Black* or *Transparent* are indeed television despite coming to screens over internet connection and in exchange for a monthly fee. It explores how internet-distributed television is able to do new things - particularly, allow different people to watch different shows chosen from a library of possibilities. This technological ability allows new audience behaviors and new norms in making television. *Portals* are the channels of internet-distributed television, and *Portals* identifies how the task of curating a library of shows differs from channels' task of building a schedule. It explores the business model--subscriber funding--that supports many portals, and identifies the key differences from advertiser or direct purchase. *Portals* considers what we know about the future of television, even though we remain early in a process of transformative change.

TV Content Analysis Yiannis Kompatsiaris, Bernard Merialdo, Shiguo Lian, 2012-05-17 The rapid advancement of digital multimedia technologies has not only revolutionized the production and distribution of audiovisual content, but also created the need to efficiently analyze TV programs to enable applications for content managers and consumers. Leaving no stone unturned, *TV Content Analysis: Techniques and Applications* provides a detailed

exploration of TV program analysis techniques. Leading researchers and academics from around the world supply scientifically sound treatment of recent developments across the related subject areas—including systems, architectures, algorithms, applications, research results, emerging approaches, and open issues. The book is organized into six parts: Content Extraction - deals with automatic analysis and annotation of TV content, addressing generic semantics and concepts as well as TV content Content Structuring - examines techniques for identifying interesting parts of TV programs and supplying direct access to it Content Recommendation - explores the problem of providing users with the most relevant content, addressing the problem of an ever-increasing amount of available content Content Quality - considers visual perception and quality approaches in the multi-display TV context and the specific mobile TV scenario Web and Social TV - presents studies on Web and TV convergence and on how user-generated content in Web 2.0 applications can be used to enhance services Content Production - covers postproduction, visual effects, and presentation standards Most parts start with a chapter that provides an overview of that area, followed by state-of-the-art approaches focusing on specific issues covered in that section. Reporting on recent advances in the field, the book provides you with the global view and up-to-date understanding of emerging trends needed to participate in the development of the digital TV domain.

The V-chip Debate Monroe E. Price, 2013-11-26 The V-chip is a highly significant part of the discussion about whether television (or broadcasting in general) deserves some special attention in terms of its accessibility to children, its particular power to affect conduct, and its invasiveness. But as this notion of filtering and labeling has caught the imagination of the regulator, the legislator, and all those who wish to consider new ways to alter bargaining over imagery in society, the very idea of the V-chip or its equivalent is moving across other technologies, including the Internet. The V-chip issue has also fueled the ongoing debate about violence and sexual practices in society, and how representations on television relate to those practices. Although the initial concept of the V-chip is simple, its flow into the public realm raises so many extraordinary questions that the introduction and production of the chip virtually serves as a case study in problems of law and public policy. The very conceptualization of speech in society is being affected by this issue. Accordingly, the place of the V-chip in this debate is increasingly important; indeed, it may be argued that the V-chip's contribution to legal argumentation may be greater than its ultimate contribution to the relationship between children and imagery. Among the questions the contributors address are: *What research basis is necessary to require a framework for labeling and rating? *What relationship between government and the image-producing industries can be characterized--for constitutional and other reasons--as voluntary as opposed to coercive? *Who should evaluate these images? *To what extent should the evaluation process be centralized and/or distributed? *What assessment is appropriate to evaluate whether the experiment is successful? In addition to the V-chip's origin's in Canada and its further evolution in the United States, this book discusses the development of the V-chip and television rating systems in Europe, Australia, and throughout the world. It also includes essays which contrast the very different approaches in Canada and the United States in terms of the role of regulatory agency, industry, and government.

Programming for TV, Radio & The Internet Lynne Gross, Brian Gross, Philippe Perebinosoff, 2012-11-12 Where do program ideas come from? How are concepts developed into saleable productions? Who do you talk to about getting a show produced? How do you schedule shows on the lineup? What do you do if a series is in trouble? The answers to these questions, and many more, can be found in this comprehensive, in-depth look at the roles and responsibilities of the electronic media programmer. Topics include: Network relationships with affiliates, the expanded market of syndication, sources of

programming for stations and networks, research and its role in programming decisions, fundamental appeals to an audience and what qualities are tied to success, outside forces that influence programming, strategies for launching new programs or saving old ones. Includes real-life examples taken from the authors' experiences, and 250+ illustrations!

The Internet Challenge to Television Bruce M. Owen, 2000 Television technology has begun to change at the same dizzying pace as computer software. What this will mean--for television, for computers, and for the popular culture where these video media reign supreme--is the subject of this timely book. A noted communications economist, Bruce Owen looks at the economic history of the television industry and at the effects of technology and government regulation on its organization.

Online TV Catherine Johnson, 2019-01-04 With growth in access to high-speed broadband and 4G, and increased ownership of smartphones, tablets and internet-connected television sets, the internet has simultaneously begun to compete with and transform television. Online TV argues that these changes create the conditions for an emergent internet era that challenges the language and concepts that we have to talk about television as a medium. In a wide-ranging analysis, Catherine Johnson sets out a series of conceptual frameworks designed to provide a clearer language with which to analyse the changes to television in the internet era and to bring into focus the power dynamics of the online TV industry. From providing definitions of online TV and the online TV industry, to examining the ways in which technology, rights, interfaces and algorithms are used to control and constrain access to audiovisual content, Online TV is a timely intervention into debates about contemporary internet and television cultures. A must-read for any students, scholars and practitioners who want to understand and analyse the ways in which television is intertwining with and being transformed by the internet.

From Television to the Internet Wiley Lee Umphlett, 2006 This book complements and expands on the commentary and conclusions of the author's initial inquiry into the modern era of media-made culture in *The Visual Focus of American Media Culture in the Twentieth Century* (FDUP, 2004). From the 1890s on to the 1920s and the Depression and World War II years, society's pervasively communal focus demanded idealized images and

romanticized interpretations of life. But the communal imperative, as it was impacted on by evolving social change, harbored the seeds of its own disintegration.

Internet Television Streaming, Copyright Law and the Aereo Supreme Court Decision Meredith Lane, 2014 Aereo and FilmOn X stream television programming over the Internet for a monthly subscription fee. Aereo and FilmOn's technology permits subscribers to watch both live broadcast television in addition to already-aired programming. Their use of this development in technology has triggered multiple lawsuits from broadcasting companies alleging copyright violations. These cases reveal not only multiple interpretations of copyright law and its application to new and developing technologies but also a possible loophole in the law, which some have accused Aereo and FilmOn of exploiting. This book discusses internet television streaming and copyright laws. It then discusses remote-storage digital video recorders and the copyright laws that go along with it.
