Astronomical and Astrophysical Objectives of Sub-Milliarcsecond Optical Astrometry Erik Høg,P. Kenneth Seidelmann,2013-12-01 Astrometry is on the threshold of great changes due to the fact that this decade, alone, is witnessing an improvement of stellar positions equivalent to the total improvement of the previous two centuries. The Hipparcos Satellite has concluded its observations, and the catalog is in preparation. Preliminary results assure that the Hipparcos catalog will provide positions, parallaxes and annual proper motions for over 100,000 stars with accuracies of 1.5 milliarcseconds. In addition, the Tycho catalog will provide positions of about 30 milliarcseconds accuracy for over 1 million stars, and annual proper motions with 3 milliarcsecond accuracy will subsequently be obtained by means of first epoch positions from the Astrographic Catalog. Optical interferometers on the ground are beginning operation, and these instruments can provide observational accuracies of approximately one milliarcsecond. Also, the traditional reference frame based on the Fundamental Catalog of bright stars is being replaced by the extragalactic reference frame, based on radio sources with accuracies of one milliarcsecond. Thus, astrometry will change from a fundamental reference frame defined in terms of the dynamical reference frame of the solar system with accuracies of 100 milliarcseconds to a space-fixed, extragalactic reference frame with accuracies of one milliarcsecond. Future astrometric observations should be in the 1 -100 milliarcsecond accuracy range. There are a number of concepts for future astrometric instruments in space. Most of these can provide sub-milliarcsecond astrometric accuracies.

Flexible Shift Planning in the Service Industry Jens O. Brunner,2010-01-07 The introductory chapter consists of four sections. In Sect. 1. 1 we reveal the current situation in hospitals that is faced by the management. We address the general issue of personnel scheduling in the service industry in Sect. 1. 2. Then we motivate our research by considering physicians as the scheduling object. In particular, we show the complex nature of physician scheduling in a hospital environment. The focus of the research is presented in Sect. 1. 3. Finally, we conclude the chapter by illustrating the outline of the thesis. 1. 1 General Economic Situation in Hospitals The mounting pressure in the health care industry to reduce costs is forcing hospitals and related facilities to take a closer look at their staffing policies (see [111]). A primary difficulty in reducing personnel costs, the major component of the budget, is the variability in demand and the need to assign staff to fixed shifts. Furthermore, government run facilities, especially those in the European Union, are seeing their budgets cut in terms of real dollars despite an aging and more acutely ill patient population (e. g. , see [96]). It has been reported that up to a third of the hospitals in Germany plan a reduction in staff (see [91]). The scheduling process is further complicated by the generally recognized importance of taking individual preferences into account. More attractive schedules promote job satisfaction, increase productivity, and reduce turnover (cf. [2]).

However,withoutimprovedschedulingprocedures that better match supplyto demand,the level of care that theynow providewill soon become unsustainable. 1.

Organic Computing — A Paradigm Shift for Complex Systems Christian Müller-Schloer,Hartmut Schmeck,Theo Ungerer,2011-04-29 Organic Computing has emerged as a challenging vision for future information processing systems. Its basis is the insight that we will increasingly be surrounded by and depend on large collections of autonomous systems, which are equipped with sensors and actuators, aware of their environment, communicating freely, and organising themselves in order to perform actions and services required by the users. These networks of intelligent systems surrounding us open fascinating ap-plication areas and at the same time bear the problem of their controllability. Hence, we have to construct such systems as robust, safe, flexible, and trustworthy as possible. In particular, a strong orientation towards human needs as opposed to a pure implementation of the tech-nologically possible seems absolutely central. The technical systems, which can achieve these goals will have to exhibit life-like or organic properties. Organic Computing Systems adapt dynamically to their current environmental conditions. In order to cope with unexpected or undesired events they are self-organising, self-configuring, self-optimising, self-healing, self-protecting, self-explaining, and context-aware, while offering complementary interfaces for higher-level directives with respect to the desired behaviour. First steps towards adaptive and self-organising computer systems are being undertaken. Adaptivity, reconfigurability, emergence of new properties, and self-organisation are hot top-ics in a variety of research groups worldwide. This book summarises the results of a 6-year priority research program (SPP) of the German Research Foundation (DFG) addressing these fundamental challenges in the design of Organic Computing systems. It presents and discusses the theoretical foundations of Organic Computing, basic methods and tools, learning techniques used in this context, architectural patterns and many applications. The final outlook shows that in the mean-time Organic Computing ideas have spawned a variety of promising new projects.

Innovators, Firms, and Markets Jonathan M. Barnett,2020-12-18 Conventional wisdom holds that robust enforcement of intellectual property (IP) right suppress competition and innovation by shielding incumbents against the entry threats posed by smaller innovators. That assumption has driven mostly successful efforts to weaken US patent protections for over a decade. This book challenges that assumption. In *Innovators, Firms, and Markets*, Jonathan M. Barnett confronts the reigning policy consensus by analyzing the relationship between IP rights, firm organization, and market structure. Integrating tools and concepts from IP and antitrust law, institutional economics, and political science, real-world understandings of technology markets, and empirical insights from the economic history of the US patent system, Barnett provides a novel framework for IP policy analysis. His cohesive framework explains how robust enforcement of IP rights enables entrepreneurial firms, which are rich in ideas but poor in capital, to secure outside investment and form the cooperative relationships needed to transform a breakthrough innovation into a marketable product. The history of the US patent system and firms' lobbying tendencies show that weakening patent protections removes a critical tool for entrants to challenge incumbents that enjoy difficult-to-match commercialization and financing capacities. Counterintuitively, the book demonstrates that weak IP rights are often the best entry barrier the state can provide to protect entrenched incumbents against disruptive innovators. By challenging common assumptions and offering a powerful integrated framework for understanding how innovation happens and the law's role in that process, Barnett's *Innovators, Firms, and Markets* provides important insights into how IP law shapes our economy.

Lifetime Spectroscopy Stefan Rein,2005-06-23 Lifetime spectroscopy is one of the most sensitive diagnostic tools for the identification and analysis of impurities in semiconductors. Since it is based on the recombination process, it provides insight into precisely those defects that are relevant to semiconductor devices such as solar cells. This book introduces a transparent modeling procedure that allows a detailed theoretical evaluation of the spectroscopic potential of the different lifetime spectroscopic techniques. The various theoretical predictions are verified experimentally with the context of a comprehensive study on different metal impurities. The quality and consistency of the spectroscopic results, as explained here, confirms the excellent performance of lifetime spectroscopy.
