“My Clan Against the World”: U.S. and Coalition Forces in Somalia 1992-1994 ,2004 This study examines the American military's experience with urban operations in Somalia, particularly in the capital city of Mogadishu. That original focus can be found in the following pages, but the authors address other, broader issues as well, to include planning for a multinational intervention; workable and unworkable command and control arrangements; the advantages and problems inherent in coalition operations; the need for cultural awareness in a clan-based society whose status as a nation-state is problematic; the continuous adjustments required by a dynamic, often unpredictable situation; the political dimension of military activities at the operational and tactical levels; and the ability to match military power and capabilities to the mission at hand.

Wolf,Xiongwu Wu,Yi Xue,Darrin M. York,Shiji Zhao,Peter A. Kollman,2021-06-13 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations, particularly on biomolecules. None of the individual programs carries this name, but the various parts work reasonably well together, and provide a powerful framework for many common calculations. The term Amber is also used to refer to the empirical force fields that are implemented here. It should be recognized, however, that the code and force field are separate: several other computer packages have implemented the Amber force fields, and other force fields can be implemented with the Amber programs. Further, the force fields are in the public domain, whereas the codes are distributed under a license agreement. The Amber software suite is divided into two parts: AmberTools21, a collection of freely available programs mostly under the GPL license, and Amber20, which is centered around the pmemd simulation program, and which continues to be licensed as before, under a more restrictive license. Amber20 represents a significant change from the most recent previous version, Amber18. (We have moved to numbering Amber releases by the last two digits of the calendar year, so there are no odd-numbered versions.) Please see <https://ambermd.org> for an overview of the most important changes. AmberTools is a set of programs for biomolecular simulation and analysis. They are designed to work well with each other, and with the “regular” Amber suite of programs. You can perform many simulation tasks with AmberTools, and you can do more extensive simulations with the combination of AmberTools and Amber itself. Most components of AmberTools are released under the GNU General Public License (GPL). A few components are in the public domain or have other open-source licenses. See the README file for more information.
