Exploding the Phone Phil Lapsley, 2013-02-05 "A rollicking history of the telephone system and the hackers who exploited its flaws." –Kirkus Reviews, starred review Before smartphones, back even before the Internet and personal computers, a misfit group of technophiles, blind teenagers, hippies, and outlaws figured out how to hack the world's largest machine: the telephone system. Starting with Alexander Graham Bell's revolutionary "harmonic telegraph," by the middle of the twentieth century the phone system had grown into something extraordinary, a web of cutting-edge switching machines and human operators that linked together millions of people like never before. But the network had a billion-dollar flaw, and once people discovered it, things would never be the same. Exploding the Phone tells this story in full for the first time. It traces the birth of long-distance communication and the telephone, the rise of AT&T's monopoly, the creation of the sophisticated machines that made it all work, and the discovery of Ma Bell's Achilles' heel. Phil Lapsley expertly weaves together the clandestine underground of "phone phreaks" who turned the network into their electronic playground, the mobsters who exploited its flaws to avoid the feds, the explosion of telephone hacking in the counterculture, and the war between the phreaks, the phone company, and the FBI. The product of extensive original research, Exploding the Phone is a groundbreaking, captivating book that "does for the phone phreaks what Steven Levy's Hackers did for computer pioneers" (Boing

Boing). “An authoritative, jaunty and enjoyable account of their sometimes comical, sometimes impressive and sometimes disquieting misdeeds.” –The Wall Street Journal “Brilliantly researched.” –The Atlantic “A fantastically fun romp through the world of early phone hackers, who sought free long distance, and in the end helped launch the computer era.” –The Seattle Times

Binaural Hearing Ruth Y. Litovsky, Matthew J. Goupell, Richard R. Fay, Arthur N. Popper, 2021-03-01 The field of Binaural Hearing involves studies of

auditory perception, physiology, and modeling, including normal and abnormal aspects of the system. Binaural processes involved in both sound localization and speech unmasking have gained a broader interest and have received growing attention in the published literature. The field has undergone some significant changes. There is now a much richer understanding of the many aspects that comprising binaural processing, its role in development, and in success and limitations of hearing-aid and cochlear-implant users. The goal of this volume is to provide an up-to-date reference on the developments and novel ideas in the field of binaural hearing. The primary readership for the volume is expected to be academic specialists in the diverse fields that connect with psychoacoustics, neuroscience, engineering, psychology, audiology, and cochlear implants. This volume will serve as an important resource by way of introduction to the field, in particular for graduate students, postdoctoral scholars, the faculty who train them and clinicians.

Young Adults Deserve the Best Sarah Flowers, Young Adult Library Services Association, 2011 As high school enrollment continues to rise, the need for effective librarianship serving young adults is greater than ever before. *Young Adults Deserve the Best: Competencies for Librarians Serving Youth*," developed by Young Adult Library Services Association (YALSA), is a document outlining areas of focus for providing quality library service in collaboration with teenagers. In this book, Sarah Flowers identifies and expands on these competency areas. This useful work includes Anecdotes and

success stories from the field Guidelines which can be used to create evaluation instruments, determine staffing needs, and develop job descriptions Additional professional resources following each chapter that will help librarians turn theory into practice The first book to thoroughly expand on this important document, *Young Adults Deserve the Best* is a key foundational tool not only for librarians but also for young adult specialists, youth advocacy professionals, and school administrators.

Auditory Prostheses Fan-Gang Zeng, Arthur N. Popper, Richard R. Fay, 2011-09-15 Cochlear implants are currently the standard treatment for profound sensorineural hearing loss. In the last decade, advances in auditory science and technology have not only greatly expanded the utility of electric stimulation to other parts of the auditory nervous system in addition to the cochlea, but have also demonstrated drastic changes in the brain in responses to electric stimulation, including changes in language development and music perception. Volume 20 of SHAR focused on basic science and technology underlying the cochlear implant. However, due to the newness of the ideas and technology, the volume did not cover any emerging applications such as bilateral cochlear implants, combined acoustic-electric stimulation, and other types of auditory prostheses, nor did it review brain plasticity in responses to electric stimulation and its perceptual and language consequences. This proposed volume takes off from Volume 20, and expands the examination of implants into new and highly exciting areas. This edited book

starts with an overview and introduction by Dr. Fan-Gang Zeng. Chapters 2-9 cover technological development and the advances in treating the full spectrum of ear disorders in the last ten years. Chapters 10-15 discuss brain responses to electric stimulation and their perceptual impact. This volume is particularly exciting because there have been quantum leap from the traditional technology discussed in Volume 20. Thus, this volume is timely and will be of real importance to the SHAR audience.

Rethinking Information Literacy Jane Secker, Emma Coonan, 2012-12-23 A vision for the future of information literacy teaching. Based on groundbreaking research, undertaken by the authors as part of the prestigious Arcadia Programme at Cambridge University, this book presents a new and dynamic information literacy curriculum developed for the 21st century information professional. The authors adopt a broad definition of information literacy (IL) that encompasses social as well as academic environments and situates IL as a fundamental attribute of the discerning scholar and the informed citizen. It seeks to address in a modular, flexible and holistic way the developing information needs of students entering higher education over the next five years. The book is organized around the ten strands of the new curriculum, which cover the whole landscape of information literacy development required to succeed as an undergraduate in higher education. Interweaving the authors' research and the reflections of internationally recognized experts from the library, education and information literacy sectors, including Moira Bent, Andy Priestner, Sarah Pavey, Geoff Walton and Elizabeth Tilley, it illustrates how and why this new curriculum will work in practice. Detailed appendices present the curriculum, lesson plans and tools for institutional audit, giving readers all the tools they need to implement

it successfully in their institutions.
