Resounding International Relations M.I. Franklin, 2016-09-23 This book explores a provocative area of inquiry for critical theory and research into world politics and popular culture: music. Not just because political science barely engages with anything musical, but also because it is clear that many opportunities for critical scholarship and reflection on global politics and economics are present in the spaces and relationships created by organized sound. It is easy to focus on the textual elements of music, but there is more at stake than just the words. Critical reflection on the intersections between music and politics also need to take into account the visceral and non-verbal elements such as counterpoint and harmony, polyphony and dissonance, noise, rhymes, rhythms, performance and the visual/aural dimensions to music-making.

The Psychology of Illustration Harvey A. Houghton, Dale M. Willows, 2012-12-06 From the earliest stages of elementary school to the advanced college level, various types of illustrations are included in educational materials in order to promote learning. These illustrative adjuncts are often profuse and, in many cases, they may be the most striking feature that distinguishes one set of learning materials from another. In addition, the perceived effectiveness of the illustrations clearly plays an important role in the marketing of many educational materials. Despite this pervasiveness and salience in education, there has never been a systematic effort to bring together the results of research on illustrations in order to provide some level of guidance to the developers of commercial learning materials. There is, however, a considerable research literature that is directly relevant to this aspect of education. The purpose of the present two volume set is to summarize and interpret the existing research literature that deals with the various educational functions of illustrations. In undertaking to produce an omnibus reference work on psychological and instructional issues surrounding illustrated learning material, our paramount aim has been to stimulate closer collaboration between researchers, producers, and users of educational text. The problems associated with moving the findings of educational research into the realm of everyday practice have been perennial ones. While many researchers and practitioners are interested in fundamentally similar questions, they typically speak dissimilar languages, read different journals, and carry out their work under disparate ideologies.

Handbook of Data Compression David Salomon, Giovanni Motta, 2010-01-18 Data compression is one of the most important fields and tools in modern computing. From archiving data, to CD-ROMs, and from coding theory to image analysis, many facets of modern computing rely upon data compression. This book provides a comprehensive reference for the many different types and methods of compression. Included are a detailed and helpful taxonomy, analysis of most common methods, and discussions on the use and comparative benefits of methods and description of how to use them. Detailed descriptions and explanations of the most well-known and frequently used compression methods are covered in a self-contained fashion, with an accessible style and technical level for specialists and non-specialists.

Understanding Engineering Mathematics John Bird, 2013-11-20 Studying engineering, whether it is mechanical, electrical or civil relies heavily on an understanding of mathematics. This new textbook clearly demonstrates the relevance of mathematical principles and shows how to apply them to solve real-life engineering problems. It deliberately starts at an elementary level so that students who are starting from a low knowledge base will be able to quickly get up to the level required. Students who have not studied mathematics for some time will find this an excellent refresher. Each chapter starts with the basics before gently increasing in complexity. A full outline of essential definitions, formulae, laws and procedures are introduced before real world situations, practicals and problem solving demonstrate how the theory is applied. Focusing on learning through practice, it contains examples, supported by 1,600 worked problems and 3,000 further problems contained within exercises throughout the text. In addition, 34 revision tests are included at regular intervals. An interactive companion website is also provided containing 2,750 further problems with worked solutions and instructor materials

The Religious Dimensions of Advertising T. Sheffield, 2006-11-13 This groundbreaking work explores media scholar Sut Jhally's thesis that advertising functions as a religion in late capitalism and relates this to critical theological studies. Sheffield argues that advertising is not itself a religion, but that it contains religious dimensions - analogous to Durkheim's description of objects as totems.

Data Compression David Salomon, 2006-05-09 A comprehensive reference for the many different types and methods of compression, including a detailed and helpful taxonomy, an analysis of the most common methods, and discussions on their use and comparative benefits. The presentation is organized into the main branches of the field: run length encoding, statistical methods, dictionary-based methods, image compression, audio compression, and video compression. Detailed descriptions and explanations of the most well-known and frequently used methods are covered in a self-contained fashion, with an accessible style and technical level for specialists and nonspecialists. In short, the book provides an invaluable reference and guide for all computer scientists, computer engineers, electrical engineers, signal/image processing engineers and other scientists needing a comprehensive compilation for a broad range of compression methods.

Return of the Divine Sophia Tricia McCannon, 2015-03-06 An initiatic journey into the Mysteries of the Goddess and humanity's return to an age of peace and celestial light • Details the ceremonies and rituals of initiation into the Fellowship of Isis • Reveals the lost teachings of Jesus about the Divine Mother and Father and how the goddess Sophia is connected to Mary Magdalene as the Female Christ • Explores the many archetypes of the Goddess, including Isis, Brigit, and the Black Madonna, and how we can transform into Homo luminous, spiritual beings of light Called through her dreams by the Priestesses of Isis, Tricia McCannon set out on a spiritual journey into the Mysteries of the Goddess. After a fateful encounter with a high initiate of the ancient Fellowship of Isis, she began researching the history of Judaism and Christianity to find out how and when the Divine Feminine became lost. She discovered a forgotten age when the Creator was honored as female and humanity lived in peaceful societies completely free of war. She shows how we can return to an age of peace and celestial light if we work to bring the masculine and feminine energies of the world back into balance. Sharing her journey into the heart of the Divine Mother, McCannon details her initiation into the Fellowship of Isis, a process rich with ceremony, ritual, and myths of the Goddess from ancient Egyptian, Celtic, Greek, Hebrew, and Native American traditions. She reveals how the many archetypes of the Goddess, including Isis, Ishtar, Brigit, and the Black Madonna, can become our allies for self-transformation. She explores Mysteries at the heart of Christianity that have remained hidden for nearly 2,000 years and how the Gnostic goddess

Sophia is tied to the Second Coming, Mary Magdalene, and the Female Christ. She reveals the lost teachings of Jesus about the Divine Mother and Father and about the Divine Daughter and Son. Through her story and her in-depth research, McCannon takes us on a journey to awaken the creative power of the Divine Feminine within each of us. Equipped with the teachings of the Goddess, we gain the mastery to overcome the deeply rooted masculine-feminine imbalance of the patriarchy and to embark into the future as Homo luminous, beings of light.

Hollywood Theory, Non-Hollywood Practice Annette Davison, 2017-07-05

Relatively little has been written about film scores and soundtracks outside of Hollywood cinema. *Hollywood Theory, Non-Hollywood Practice* addresses this gap by looking at the practices of film soundtrack composition for non-Hollywood films made after 1980. Annette Davison argues that since the mid-1970s the model of the classical Hollywood score has functioned as a form of dominant ideology in relation to which alternative scoring and soundtrack practices may assert themselves. The first part of the book explores some of the key theoretical issues and debates in film studies and film music studies. The second part comprises a series of case studies of non-Hollywood scores. Starting with Jean Luc Godard's *Pr m: Carmen* (1983), Davison argues that the film's score offers a deconstruction of the relationship between sound and image proposed by classical Hollywood film. Derek Jarman's *The Garden* (1990) takes the debate a step further in its exploration of the possibility that a film's soundtrack may be liberated from slavery to the image track. *Wings of Desire* (1987) directed by Wim Wenders offers, Davison believes, a negotiation between classical and alternative scoring and soundtrack practices; while David Lynch's *Wild at Heart* (1990) actually fully integrates scoring and soundtrack practices so that sounds and dialogue are used in musical ways. Seeking to stimulate debate about the aesthetics and interpretation of film scores and soundtracks in general, this book develops an important synthesis of film studies and musicology.
