Hold Me Closer, Necromancer Lish McBride, 2010-10-12 Sam leads a pretty normal life. He may not have the most exciting job in the world, but he's doing all right—until a fast food prank brings him to the attention of Douglas, a creepy guy with an intense violent streak. Turns out Douglas is a necromancer who raises the dead for cash and sees potential in Sam. Then Sam discovers he's a necromancer too, but with strangely latent powers. And his worst nightmare wants to join forces . . . or else. With only a week to figure things out, Sam needs all the help he can get. Luckily he lives in Seattle, which has nearly as many paranormal types as it does coffee places. But even with newfound friends, will Sam be able to save his skin? *Hold Me Closer, Necromancer* is a 2011 Bank Street - Best Children's Book of the Year.

Absolute Brightness James Lecesne, 2016-05-31 From Academy Award-winning writer, actor, and activist in the LGBTQ community comes a groundbreaking story about love, prejudice, and being yourself. “This complex, illuminating and beautiful book reminds us we have to look for the light even in the darkest corners.” —Brian Selznick, author of *The Invention of Hugo Cabret* Phoebe's life in Neptune, New Jersey, is somewhat unremarkable. She helps her mom out with her hair salon, she goes to school, and she envies her perfect older sister. But everything changes when Leonard arrives. Leonard is an orphan, a cousin who Phoebe never knew she had. When he comes to live with Phoebe's family, he upsets the delicate balance of their lives. He's gay and confident about who he is. He inspires the people around him. He sees people not as they are, but as they hope to be. One day, Leonard goes missing. Phoebe, her family, and her community fight to understand what happened, and to make sense of why someone might want to extinguish the beautiful absolute brightness that was Leonard Pelkey. This novel by James Lecesne, the cofounder of The Trevor Project, inspired the critically-acclaimed Off-Broadway show *The Absolute Brightness of Leonard Pelkey*. A William C. Morris Debut Award Finalist “This book will encourage you to be exactly who you are.” —Eve Ensler, author of *The Vagina Monologues*

Morals and Markets D. Friedman, D. McNeill, 2013-07-08 Friedman and McNeill draw on recent research in evolutionary game theory and behavioral economics to explore the relationship between our moral codes and our market systems. They show how imbalance between morals and markets is at the root of the recent corporate scandals in the US as well as the global financial crisis the world continues to face.

The 100 Most Influential Inventors of All Time Britannica Educational Publishing, 2009-10-01 If necessity is indeed the mother of invention, then the individuals profiled in this volume should be considered the most laudable of all midwives. They each saw a need and met it. Readers will learn more about the lives and methodologies of well-known inventors such as Benjamin Franklin and Thomas Edison, and become familiar with several more whose creations have sometimes outstripped their personal fame.

The History, Present State, and Future of Information Technology Andrew Targowski, In Part I, Prof. Targowski takes us through the evolution of modern computing and information systems. While much of this material is familiar to those of us who have lived through these developments, it would definitely not be familiar to our children or our students. He also introduces a perspective that I found both refreshing and useful: looking at the evolution on a country by country basis. For those of us who live in the U.S., it is all too easy to imagine that evolution to be a purely local phenomenon. I found my appreciation of the truly global nature of computing expanding as he walked me through each country's contributions. In Parts II and III, constituting nearly half of the book, Targowski provides what I would describe as an in-depth case study of the challenges and successes of informatics in Poland. As he tells each story—many of which involved him personally—the reader cannot help but better understand the close relationship between the freedoms that we in the west take for granted and the ability to produce innovations in IT. Even after

Poland left the orbit of the former Soviet Union, the remaining vestiges of the old way of thinking remained a major impediment to progress. Being right and being rigorous were far less important than being in tune with the “approved” ways of thinking. There are important lessons to be learned here, particularly as we try to project how IT will evolve in rapidly developing economies such as China. But, from my experience, they apply equally well to western academia, where moving outside of preferred values and patterns of research can lead a scholar to be ignored or even disparaged. In Part IV, Targowski presents a bold, forward-looking synthesis of informatics and informing science in the future. Building upon articles recently published in *Informing Science: The International Journal of an Emerging Transdiscipline*, he presents a conceptual scheme of historical informing waves that builds upon historians such as Toynbee. He then considers how these trends will necessarily force us to rethink how we develop and apply IT. He does not steer away from the controversial. But he also provides cogent arguments for all his predictions and recommendations.

The Films of Wes Anderson P. Kunze, 2014-05-01 Wes Anderson's films can be divisive, but he is widely recognized as the inspiration for several recent trends in indie films. Using both practical and theoretical lenses, the contributors address and explain the recurring stylistic techniques, motifs, and themes that dominate Anderson's films and have had such an impact on current filmmaking.

The Absolute Brightness of Leonard Pelkey James Lecesne, 2017-03-16 One actor portrays every character in a small Jersey Shore town as he unravels the story of Leonard Pelkey, a tenaciously optimistic and flamboyant fourteen-year-old boy who goes missing. A luminous force of nature whose magic is only truly felt once he is gone, Leonard becomes an unexpected inspiration as the town's citizens question how they live, who they love, and what they leave behind.

Mediatization Knut Lundby, 2009 The media are ubiquitous and constantly changing, causing social and cultural shifts. This book examines how processes of mediatization affect almost all areas of contemporary social and cultural life, and takes the theoretical debate on mediatization in communication studies and media sociology to a critical edge.

The Religious Dimensions of Advertising T. Sheffield, 2006-11-13 This groundbreaking work explores media scholar Sut Jhally's thesis that advertising functions as a religion in late capitalism and relates this to critical theological studies. Sheffield argues that advertising is not itself a religion, but that it contains religious dimensions - analogous to Durkheim's description of objects as totems.

Human Origins, 2011 Describes how mapping the human genome has aided paleoanthropologists in their study of ancient bones used to explore human origins, from the earliest humans--bipedal apes--up to Martin Pickford's Millennium Man.

Taking Science to School National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Science Education, Committee on Science Learning, Kindergarten Through Eighth Grade, 2007-04-16 What is science for a child? How do children learn about science and how to do science? Drawing on a vast array of work from neuroscience to classroom observation, *Taking Science to School* provides a comprehensive picture of what we know about teaching and learning science from kindergarten through eighth grade. By looking at a broad range of questions, this book provides a basic foundation for guiding science teaching and supporting students in their learning. *Taking Science to School* answers such questions as: When do children begin to learn about science? Are there critical stages in a child's development of such scientific concepts as mass or animate objects? What role does nonschool

learning play in children's knowledge of science? How can science education capitalize on children's natural curiosity? What are the best tasks for books, lectures, and hands-on learning? How can teachers be taught to teach science? The book also provides a detailed examination of how we know what we know about children's learning of science—about the role of research and evidence. This book will be an essential resource for everyone involved in K-8 science education—teachers, principals, boards of education, teacher education providers and accreditors, education researchers, federal education agencies, and state and federal policy makers. It will also be a useful guide for parents and others interested in how children learn.

The Last Human Esteban E. Sarmiento, Kenneth Mowbray, Gary J. Sawyer, Richard Milner, Viktor Deak, Ian Tattersall, 2007-01-01 Creates three-dimensional scientific reconstructions for twenty-two species of extinct humans, providing information for each one on its emergence, chronology, geographic range, classification, physiology, environment, habitat, cultural achievements, coex

Useless Arithmetic Orrin H. Pilkey, Linda Pilkey-Jarvis, 2007-01-09 Noted coastal geologist Orrin Pilkey and environmental scientist Linda Pilkey-Jarvis show that the quantitative mathematical models policy makers and government administrators use to form environmental policies are seriously flawed. Based on unrealistic and sometimes false assumptions, these models often yield answers that support unwise policies. Writing for the general, nonmathematician reader and using examples from throughout the environmental sciences, Pilkey and Pilkey-Jarvis show how unquestioned faith in mathematical models can blind us to the hard data and sound judgment of experienced scientific fieldwork. They begin with a riveting account of the extinction of the North Atlantic cod on the Grand Banks of Canada. Next they engage in a general discussion of the limitations of many models across a broad array of crucial environmental subjects. The book offers fascinating case studies depicting how the seductiveness of quantitative models has led to unmanageable nuclear waste disposal practices, poisoned mining sites, unjustifiable faith in predicted sea level rise rates, bad predictions of future shoreline erosion rates, overoptimistic cost estimates of artificial beaches, and a host of other thorny problems. The authors demonstrate how many modelers have been reckless, employing fudge factors to assure correct answers and caring little if their models actually worked. A timely and urgent book written in an engaging style, *Useless Arithmetic* evaluates the assumptions behind models, the nature of the field data, and the dialogue between modelers and their customers.

The World's Key Industry G. Harlaftis, S. Tenold, J. Valdaliso, 2012-11-02 Maritime transport has been the main driver of trade growth, and the emergence and development of a global economy. This collection of essays from distinguished economists and historians takes an international and comparative perspective, covering topics ranging from technological advance and the role of the state to maritime business development.

Childhood and Consumer Culture D. Buckingham, V. Tingstad, 2010-08-11 In recent years children have become an increasingly important consumer market, and there is growing concern about the 'commercialisation' of childhood. This book sheds light on these debates, offering new empirical data and challenging critical perspectives on children's engagement with consumer culture from a wide range of international settings.

Multiple Case Study Analysis Robert E. Stake, 2013-04-29 Examining situational complexity is a vital part of social and behavioral science research. This engaging text provides an effective process for studying multiple cases--such as sets of teachers, staff development sessions, or clinics operating in different locations--

within one complex program. The process also can be used to investigate broadly occurring phenomena without programmatic links, such as leadership or sibling rivalry. Readers learn to design, analyze, and report studies that balance common issues across the group of cases with the unique features and context of each case. Three actual case reports from a transnational early childhood program illustrate the author's approach, and helpful reproducible worksheets facilitate multicase recording and analysis.

Spectral Shakespeares M. Calbi,2013-10-01 Spectral Shakespeares is an illuminating exploration of recent, experimental adaptations of Shakespeare on film, TV, and the web. Drawing on adaptation studies and media theory as well as Jacques Derrida's work, this book argues that these adaptations foreground a cluster of self-reflexive themes - from incorporation to reiteration, from migration to addiction, from silence to survival - that contribute to the redefinition of adaptation, and Shakespearean adaptation in particular, as an unfinished and interminable process. The Shakespeare that emerges from these adaptations is a fragmentary, mediatized, and heterogeneous presence, a spectral Shakespeare that leaves a mark on our contemporary mediascape.
