Apache Solr Dikshant Shahi,2015-12-26 Build an enterprise search engine using Apache Solr: index and search documents; ingest data from varied sources; apply various text processing techniques; utilize different search capabilities; and customize Solr to retrieve the desired results. Apache Solr: A Practical Approach to Enterprise Search explains each essential concept-backed by practical and industry examples--to help you attain expert-level knowledge. The book, which assumes a basic knowledge of Java, starts with an introduction to Solr, followed by steps to setting it up, indexing your first set of documents, and searching them. It then introduces you to information retrieval and its implementation in Apache Solr; this will help you understand your search problem, decide the approach to build an effective solution, and use various metrics to evaluate the results. The book next covers the schema design and techniques to build a text analysis chain for cleansing, normalizing and enriching your documents and addressing different types of search queries. It describes various popular matching techniques which are generally applied to improve the precision and recall of searches. You will learn the end-to-end process of data ingestion from varied sources, metadata extraction, pre-processing and transformation of content, various search components, query parsers and other advanced search capabilities. After covering out-of-the-box features, Solr expert Dikshant Shahi dives into ways you can customize Solr for your business and its specific requirements, along with ways to plug in your own components. Most important, you will learn about implementations for Solr scoring, factors affecting the document score, and tuning the score for the application at hand. The book explains why textual scoring is not sufficient for practical ranking of documents and ways to integrate real-world factors for contributing to the document ranking. You'll see how to influence user experience by providing suggestions and recommendations. You'll also see integration of Solr with important related technologies such as OpenNLP and Tika. Additionally, you will learn about scaling Solr using SolrCloud. This book concludes with coverage of semantic search capabilities, which is crucial for taking the search experience to the next level. By the end of Apache Solr, you will be proficient in designing and developing your search engine.

Forensic Science Richard Saferstein,2013 Forensic Science: From the Crime Scene to the Crime Lab, Second Edition, is designed to present forensic science in a straightforward and student-friendly format. Ideal for students with limited background in the sciences, topics are arranged to integrate scientific methodology with actual forensic applications. Discussions are focused on explaining state-of-the-art technology without delving into extraneous theories that may bore or overwhelm non-science students. Only the most relevant scientific and technological concepts are presented, keeping students focused on the practical knowledge they'll need in the field.

Sound, Media, Ecology Milena Droumeva,Randolph Jordan,2019-06-27 This volume reads the global urban environment through mediated sonic practices to put a contemporary spin on acoustic ecology's investigations at the intersection of space, cultures, technology, and the senses. Acoustic ecology is an interdisciplinary framework from the 1970s for documenting, analyzing, and transforming sonic environments: an early model of the cross-boundary thinking and multi-modal practices now common across the digital humanities. With the recent emergence of sound studies and the expansion of "ecological" thinking, there is an increased urgency to re-discover and contemporize the acoustic ecology tradition. This book serves as a comprehensive investigation into the ways in which current scholars working with sound are re-inventing acoustic ecology across diverse fields, drawing on acoustic ecology's focus on sensory experience, place, and applied research, as well as attendance to mediatized practices in sounded space. From sounding out the Anthropocene, to rethinking our auditory media landscapes, to exploring citizenship and community, this volume brings the original acoustic ecology problem set into the contemporary landscape of sound studies.

Managed Code Rootkits Erez Metula,2010-11-25 Managed Code Rootkits is the first book to cover application-level rootkits and other types of malware inside the application VM, which runs a platform-independent programming environment for processes. The book, divided into four parts, points out high-level attacks, which are developed in intermediate language. The initial part of the book offers an overview of managed code rootkits. It explores environment models of managed code and the relationship of managed code to rootkits by studying how they use application VMs. It also discusses attackers of managed code rootkits and various attack scenarios. The second part of the book covers the development of managed code rootkits, starting with the tools used in producing managed code rootkits through their deployment. The next part focuses on countermeasures that can possibly be used against managed code rootkits, including technical solutions, prevention, detection, and response tactics. The book concludes by presenting techniques that are somehow similar to managed code rootkits, which can be used in solving problems. Named a 2011 Best Hacking and Pen Testing Book by InfoSec Reviews Introduces the reader briefly to managed code environments and rootkits in general Completely details a new type of rootkit hiding in the application level and demonstrates how a hacker can change language runtime implementation Focuses on managed code including Java, .NET, Android Dalvik and reviews malware development scenarios

Knowing Music, Making Music Benjamin Brinner,1995-12 Using illustrative examples from a variety of traditions, Benjamin Brinner first examines the elements and characteristics of musical competence, the different kinds of competence in a musical community, the development of multiple competences, and the acquisition and transformation of competence through time. He then shows how these factors come into play in musical interaction, establishing four intersecting theoretical perspectives based on ensemble roles, systems of communication, sound structures, and individual motivations. These perspectives are applied to the dynamics of gamelan performance to explain the social, musical, and contextual factors that affect the negotiation of consensus in musical interaction. The discussion ranges from sociocultural norms of interpersonal conduct to links between music, dance, theater, and ritual, and from issues of authority and deference to musicians' self-perceptions and mutual assessments.

Moon-face and Other Stories Jack London,1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. The son of the Wolf (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, The Call of the Wild (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including The Sea-Wolf (1904), White Fang (1906), South Sea Tales (1911), and Jerry of the South Seas (1917). One of London's most interesting novels is the semi-autobiographical Martin Eden (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

Notes from the Hyena's Belly Nega Mezlekia,2015-04-07 In this acclaimed memoir, Mezlekia recalls his boyhood in the arid city of Jijiga, Ethiopia, and his journey to manhood during the 1970s and 1980s. He traces his personal evolution from child to soldier--forced at the age of eighteen to join a guerrilla army. And he describes the hardships that consumed Ethiopia after the fall of Emperor Haile Selassie and the rise to power of the communist junta, in whose terror thousands of Ethiopians died. Part autobiography and part social history, Notes from the Hyena's Belly offers an unforgettable portrait of Ethiopia, and of Africa, during the defining and turbulent years of the last century.

Alpine Archaeology Patrick Hunt,2007 Patrick Hunt s Alpine Archaeology is born out of more than a decade of widespread high altitude archaeological field research in the Alps. The observations in this research study were made over time in a number of different field seasons and therefore, gradually built up over the years. The author conducted this study while directing the Stanford Alpine Archaeological Project. Alpine archaeology is a specialized field where normal archaeological principles such as stratigraphy, pedology, data recording, anthropogenic features, materials analyses etc. apply but where contextual and climatic conditions are considerably unique. Higher altitudes and cold climate impact archaeological research and its practice in many different ways and influence the survival and preservation of both organic substances and metal objects as less oxidation and lower diffusion rates in the alpine environment noticeably inhibit the decomposition and corrosion of artifactual material. While observations in the first part of the book have been derived mostly from fieldwork in the Grand-St-Bernard region, those discussed in the second part are derived from the Stanford Alpine Archaeology Project s most important ongoing research, which is focused on attempting to trace Hannibal s route over the Alps in 218 BCE. Hunt completed his PhD in Archaeology from the Institute of Archaeology, University of London in 1991. He is on the Classics and Archaeology faculty at Stanford University, where he has been Director of the Stanford Alpine Archaeology Project since 1994. His Hannibal research is sponsored by the National Geographic Society, with a grant from their Expedition Council for 2007 2008.
